Garden Spot's ag value pegged at $385 million during 1977; poultry, cattle, hogs lead way

By DIETER KRIEG

LANCASTER – Despite a loss of 8200 acres of farmland, Lancaster County farmers managed to increase their productivity by nearly $23½ million in 1977, compared to 1976. Total value of Lancaster County's 1977 agricultural products is pegged at a whopping $385,651,130, according to information released this week by the Pennsylvania Crop Reporting Service. Last year that figure stood at $362,169,300, and in 1975 the tab was $335,180,200.

While much of that increase is due to inflation, a significant portion can be attributed to better production in the fields and barns within the Garden Spot. The fact that farmers here lost nearly 2.5 per cent of their farmland puts a sizable dent into the inflation rate recorded for 1977 by the U.S. Department of Labor – 7.1 per cent. That leaves ample room for credit to the Garden Spot farmers' productivity. Furthermore, Lancaster County's rate of inflation ranks below the national average, thus further sparkle is added to the Garden Spot's status.

Further proof of increased productivity are noticeable, for example, in the 1977 Red Rose DHIA summary. Whereas 71 herds averaged more than 600 pounds of butterfat per cow per year during 1976, that figure jumped to 121 herds in 1977. Similar comparisons can be made in other segments of the industry.

Details follow:

In the summary released by the Crop Reporting Service, Lancaster County ranked first in five out of seven livestock production categories. They were: dairy products, poultry and broiler production, layers and eggs, cattle and calves, and hogs. The county ranks second in

Cattlemen face imports, prices drop

Carter inflates beef imports

Jimmy Carter

Robert Bergland

Frank Darcey

By DIETER KRIEG

WASHINGTON, D.C. – Despite intensive lobbying and protests by the nation's cattle organizations, President Jimmy Carter on Thursday afternoon authorized an increase in beef imports which are designed to save consumers $500 million or more during the remainder of this year.

In making the announcement, the President claimed that only hamburger and processed beef prices would be affected. They're expected to stay about five cents a pound below where they'd be under freely floating market conditions.

The specifics of the Carter statement say that an additional 200 million pounds of beef will be imported during the second half of 1978. In making the statement, Carter acknowledged that during 15 of the past 23 quarters (3-month periods) cattlemen had suffered losses.

While Carter claims the action won't hurt cattlemen, the cattlemen themselves have a different opinion on the matter. Most of them are angry.

The National Cattlemen's Association, headquartered in Denver, Colo., called Carter's decision "a cruel hoax which will hurt rather

New cattle sale record set

By KENDACE BORRY

LANCASTER – "Cattle – The auction total is the largest one day receipts in the 15 year history of the Lancaster auction." Thus begins the report of this week's Lancaster Livestock Market which was held on Monday. Close to 2,000 cattle were sold.

The previous high numbers of cattle record at the Lancaster Stockyards was 1,897 which occurred last June 27. The previous high record county wide had been set at the New Holland Sales Stables last year, when 1,942 head of cattle were sold a year ago on June 23.

Compared to the previous Wednesday's market, slaughter steers were $3 to $4 lower per hundredweight. Slaughter heifers were down $3.50 to $4, cows were $50 cents to $1 higher, and bullocks $1 to $2 lower.

Some of the prices of slaughter steers on Monday included high choice and prime, 3-4, 1085 to 1350 lbs. 57.60-59.75; with one lot 1250 lbs. bringing 60.25.

According to William G. McCoy, president of the

Pa. farmers participate in set-aside

By JOANNE SPAHR

HARRISBURG – As of the May 31 deadline, 1,179,689 farms across the nation had enrolled in the 1978 cotton, feed grain, and wheat programs say officials at the Agricultural Stabilization and Conservation Service in Harrisburg.

Of those farms, 13,381 were signed up in the Commonwealth of Pennsylvania for a total statewide set-aside acreage of 82,320 acres. Broken down into commodities, 9,754 acres of wheat will be divorted; 1775 acres of barley; 38,033 acres of corn; and 206 acres of grain sorghum.

Additional acreage set-aside under the voluntary diversion program includes 973 acres of barley; 30,822 acres of corn; and 93 acres of grain sorghum.

Over 650 acres of wheat were recorded for haying and grazing.

Nationally, cropland designated as set aside by the signed farms totaled 16,266,938 acres including 9,411,059 acres under the wheat program and 6,855,879 acres under feed grains.

Additional acreages to be diverted by the participating farms under the feed grain program is 5,232,084 acres. Farmers plan to graze or cut hay for over 1.3 million acres of wheat.

Egg conference invites area poultrymen

LANCASTER – Owners of egg producing poultry in Lancaster County and surrounding areas will be guests of the Northeast Egg Marketing Association and United Egg Producers at a dinner meeting scheduled for June 20 at 6 p.m. at the Plain and Fancy Restaurant, Bird-in-Hand.

The Northeast Egg Marketing Association, better known as NEMA is the regional producers' cooperative that works with United Egg Producers (UEP) in the Mid-Atlantic and New England states. Membership in both organizations is strictly limited to flock owners.

In announcing the session, NEMA's general manager, Bill Rent said: "We are pleased to bring a meeting of this type into an area where the egg marketing industry continues to make constructive strides."

Rent said further: Participants at the June 20 meeting can expect to hear frank discussions of issues facing the egg industry as we

Cherries to ripen by July

By JOANNE SPAHR

LITITZ – At this time last year home canners were picking cherries to their hearts' content. That's not the case this year, however. From the looks of things, cherry enthusiasts will have to wait until at least the last week in June and possibly the first week in July before they can pop that first juicy fruit delicacy into their mouths. But, say orchardists, if weather conditions continue to be

(Turn to Page 24)

Tobacco planting now begun

By JOANNE SPAHR

LITITZ -- Tobacco growers in Lancaster Farming's coverage area were finally able to get the beginnings of their crop planted this week. According to reports a few farmers were able to begin planting last Thursday and Friday, (June 1 and 2) while the majority of those individual planting began in the early part of this week.

By Wednesday, a number of growers in the New Holland area had from two to five acres planted, and in the Central Manor area one tobacco farmer and his son had as much as 10 acres in the ground.

PACMA Eggs

PACMA-FACTS

The following market is supplied by PACMA-FACTS, a direct marketing organization affiliated with the Pennsylvania Farmers' Association. Participating poultrymen are members of PACMA, which employs a fowl marketing agent, The Farmers' Agricultural Cooperative Trading Society (FACT) - to sell members' fowl. PACMA works directly with the PFA poultrymen in the program.

Farm point prices prevailing for fowl to be marketed by members during the week of June 5 were 11½ plant, and 9½ farm.

Baltimore Eggs

June 7, 1978

Eggs:

Demand for cartoned eggs was fairly good with several retail promotions. Supplies are adequate on Large, Medium and Smalls short of Jumbo and Extra Large.

HUBBARD WHITE MT. BROILERS

From calf to cow, we formulate feeds and feeding programs with your profit in mind.

Are you in the dairy business to stay?

Are you ready to devote an hour or so of your time *planning* for a more profitable future?

If your answer to both questions is yes, you owe it to yourself to read what we have to say.

Unlike many other feed companies, we develop *custom* feeding programs for each individual dairy.

It all starts with a Pennfield man reviewing your total operation with you. Your goals. Your records. The health and overall condition of your milking cows and young stock. Your management practices. Your roughage feeding program. And other factors that have an effect on your profit potential.

We also conduct laboratory analysis of the roughages you feed to determine their nutrient content.

With the aid of computers, we then design a *balanced* feeding program specifically tailored to *your* operation and goals—a program that can improve your profits by reducing expenses, increasing production, or both.

For example, while using a Pennfield customized feeding program, 30 herds this past year averaged 1,688 lbs. more milk and 64 lbs. more fat per cow than the previous year.

There is no cost—or obligation—for this unique service. But you must take the first step by writing or phoning us. Do it today.

Pennfield Feeds, 711 Rohrerstown Rd., Lancaster, PA 17604. Local calls: Lancaster 299-2561, Red Lion 244-4511. In 717 and 215 areas dial toll free 800-732-0467.

THE OLD FARMER'S ALMANAC

JUNE 12-18, 1978

A June day is never too long.

Longest days and shortest nights now Babe Ruth last appeared in uniform June 13, 1948 First quarter of the moon June 13 Average length of days for the week, 15 hours, 17 minutes Father's Day June 18 Flag Day June 14 (Congress adopted 13 stars and stripes that day in 1777) *Circumstances alter cases, the straightest stick appears crooked in water*

Ask the Old Farmer: At a town meeting in New England in March 1739, one Mack White, age 23, was elected to the office of Grainrowman Have you any idea what the duties of this office might have been? W L , Rutland, Vt

This is guesswork, pure and simple but the man could have been a sort of inspector The word is in two parts, one relating to grain, the other to things Roman Now, there was a Roman meal in which the miller was allowed to mix certain seeds with the corn This man of yours might have been authorized to oversee it being done

Home Hints Ferns and other plants thrive on leftover tea

OLD FARMER'S WEATHER FORECASTS

New England: Heavy rainstorm through Friday, partly sunny and warm for week's end

Greater New York-New Jersey: Cool with heavy showers through Thursday, remainder of week sunny and hot with some showers

Middle Atlantic Coastal: Cool with some rainy days for most of week

Piedmont & Southeast Coastal: Sunny with scattered light showers, hot

Florida: Seasonal with showers all week

Upstate N.Y.-Toronto & Montreal: Rain with cool west to start, then cool and rainy east, sunny west at midweek, weekend mostly sunny

Greater Ohio Valley. Cool and partly sunny, then week's end sunny, hot east

Deep South: Heavy showers north, some clearing, then clouding up, showers in mountains

Chicago & Southern Great Lakes: First of week partly sunny, cool with showers east, showers with clearing and seasonal temperatures expected for remainder of week

Northern Great Plains-Great Lakes: Rainy and seasonal, sunny and hot with some showers for week's end

Central Great Plains: Cool with intermittent rain, then warm and rainy at midweek, weekend promises locally heavy rain

Texas-Oklahoma: Fair and seasonal, some rain Gulf and north to start, end of week partly cloudy north, rain south

Rocky Mountain: Sunny and hot with a few showers, cloudier and cool with showers north for weekend

Southwest Desert: Variably cloudy, very hot all week, some showers east

Pacific Northwest: Week begins clear and hot, then rain north, widely scattered showers south, weekend rainy

California: Sunny inland, high coastal fog and cool, clear inland with variable fog west for weekend

EDITORIAL COMMENTS By DIETER KRIEG, EDITOR

Meddling with cattle business can get messy

Cattlemen in the United States have been slapped in the face by none other than President Jimmy Carter for having realized the all-American dream of making a profit. And that isn't all. What Carter is in effect saying is that cattlemen are also the villains who are responsible for this country's wave of inflation. So, President Carter, farmer and inflation fighter that he is, opened the way for more beef imports to keep domestic beef prices lower than what they'd be without imports.

The net result, according to a statement released by President Carter on Thursday afternoon, will be a saving of $500 million or more to the consuming public.

Admittedly, the 200 million pounds of beef President Carter is authorizing for import isn't much. It only amounts to about a pound per person. But it's the principle of the matter which is worthy of argument.

Now, the obvious question to ask is why pick on beef prices?

The answer is that beef is food and everybody can identify with that. Food is for everybody. President Carter wants to be for everybody (or at least have their vote) and this latest slap to the farmer, he believes, is one way of getting a favorable nod from a majority of Americans. He realizes, evidently, that he needs a favorable nod desperately. Public opinion polls show the former peanut farmer has sunk to rather low esteem.

But even if President Carter regains some of his former popularity, he's sliding for new depths as far as farmers are concerned. Especially cattlemen.

"Why didn't he do something to control prices and inflation when the coal miners were on strike?" one lady fumed even before the President made his beef import statement at 3:30 p.m., Thursday. "And what about postage stamps, why didn't he do something about that?" she continued. Possible answers to those questions might be that 1. the United Mine Workers (UMW) are unionized and Carter is every inch a union man (or union boss' puppet) and 2. the U.S. Post Office is run by the government. Furthermore, postal workers are also unionized.

The shameful thing about the coal strike is that this country has plenty of miners who were willing to work and who aren't members of unions. The union thugs prevented the non-union workers from going into the mines, and even if they did manage to get the coal out, the UMW boys stopped the trucks and forced drivers to dump their loads.

Where was Jimmy Carter during those days to protect an individual's right to work?

It's worthwhile to note here that even as of this writing Congress is considering legislation which would eliminate a person's choice as to whether he'll belong to a union or not. The union bosses want the workers whether they like it or not. And President Carter, of course, is all for that scandalous scheme. Strangely enough, however, not much of a fuss is being made about this sinister plan to take away a person's right to work.

Some of you folks may wonder what in the world this portion of the editorial has to do with beef prices. Well, you see, beef prices are being blamed for inflation and cattlemen are the fellows being pushed in the ground because of it. But the truth of the matter that beef prices have been rising in the supermarket because (you guessed it) the unions got a handle on the retail end of it. If President Carter were serious about his so-called battle with inflation he'd check with the boys who run the meat cutters' union. The Chicago area is reported to be especially notorious for questionable activities in that industry. And Carter would also (like the lady said) have done something about the coal strike and rising postage, to name a few.

All things considered, it looks as though government is catering to union interests, while forgetting about free enterprise and individual initiative. With that, we're all losers, not just the nation's cattlemen.

THE BIBLE SPEAKS

Interpreting Uniform Sunday School Lessons

BY LAWRENCE W. ALTHOUSE

THE MEDIATOR

Lesson for June 11, 1978

Background Scripture:
Acts 15.
Devotional Reading:
Romans 12:9-21

Well, they were back at it again!

Those same wonderful people who expressed such dismay when the Samaritans responded to Philip's preaching and received the Spirit, who "roasted" Peter for going up to Caesarea and preaching to Gentiles, the same crowd we thought had been "silenced" once and for all in Acts 11 (as Luke thought they had been) – were now causing another uproar in the church over the same old issue!

...some men came down from Judea to the church at Antioch and were teaching the brethren, "Unless you are circumcised according to the custom of Moses you cannot be saved." (15.1)

No Small Dissession

What, hadn't they got the message before when Peter came back from being with Cornelius? Hadn't they grasped, as he did, that "God is no respecter of persons, but in every nation any one who fears him and does what is right is acceptable to him"? (10:34-35). Didn't their "silence" of which Luke speaks mean that they at last perceived the error of their narrowness?

No, apparently not. Their "silence" did not mean the issue was settled in their hearts, only postponed. Sometimes prejudices and hardness of heart are too well established in people for the Spirit of God to dislodge. They kept quiet for a while and then resumed their trouble-making in the church, smugly confident that God was dependent upon them for his defense.

When people are that confident of their role as God's defenders, it is very difficult for God to get through to them, let alone persuade them that the God of heaven and earth does not need defenders, but servants. Of course, it's always more fun to be a defender than a servant. The capacity of the God-defender for causing "no small dissension" in the church is staggering.

No Greater Burden

The church at Antioch, however, approached this dangerous problem with great judgement. Instead of splitting into warring groups, Paul and Barnabas were sent to Jerusalem for a decision by the church leaders.

It must be admitted that as the leaders at Jerusalem approached this problem, the prospects of a harmonious settlement looked extremely unlikely. Yet, somehow there came out of that meeting a compromise that both maintained essentials and yet gave both parties some sense of satisfaction. Something or Someone had moved both groups to listen afresh to the Spirit of Christ. The Holy Spirit was able to mediate between them and persuade them that the most important question was not what they wanted, but what did Christ want for his church?

Even today that Mediator is available to us in our disagreements if we will seek him.

NOW IS THE TIME

By Max Smith, Lancaster County Agricultural Agent

TO REDUCE HERBICIDE DRIFT

Many weed killers are not very selective and will injure other nearby plants and trees. We urge applicators and home users to beware of the danger of drift from the spraying operation. There are two things to be done to reduce the danger of drift.

One is to spray when air currents are slow - below 5 miles per hour. This is more common during the early morning hours than later in the day.

The second thing that can be done is to reduce pressure and increase droplet size. The greater the pressure in the spray tank, the smaller will be the droplet size; for example, there is little danger from drift when using a sprinkling can. Low pressure means larger droplets and less danger of drifting to nearby plants.

Be careful with spray drift this time of the year; there are herbicide-suceptible plants that will be injured.

TO USE RESPIRATORS

It is suggested that farmers invest in respirators to meet safety measures under today's farming procedures. These are often needed for handling and applying various spray materials, and when using solvents that give off toxic fumes.

In addition, farmers working in dusty places, in manure storage tanks, and in silos should wear one of these protective devices. Dusts, molds, and fumes are hard on lungs and require some mechanism to reduce injury. Canister respirators are suggested because they cover the entire face, and the filter is carried in a canister that is connected by hose with the face mask. Don't expose yourself to permanent lung injury when protection is available.

TO USE ANTIBIOTICS WISELY

Every livestock and poultry producer should be certain that antibiotics are used in strict compliance with published regulations. To fail to do this invites more regulations and places the product in jeopardy. When these materials are used, be sure to read the regulations and follow them accurately.

In addition, it is strongly suggested that record be kept of the application or treatment. This might be very important if the Food and Drug folks find excess residues. Withdrawal periods should be recognized as vital to the future of the market. Don't take chances.

TO MOVE LIVESTOCK CAREFULLY

Hot weather requires some special handling of livestock, if losses are to be kept to a minimum. When temperatures and humidity both get above 80 degrees livestock suffer the same as human beings. Fat animals suffer more than breeding animals, and fat hogs can stand the least amount of heat and humidity.

We suggest that livestock be moved during the early morning hours, and be hauled on trucks bedded down with wet sand or sawdust. A minimum of stress and excitement will also reduce the danger of heat exhaustion. Trucks should be either open-sided or have good ventilation during hot weather; losses during breakdowns can be reduced by having a stand-by truck available on short notice.

Livestock values are very high at this time; don't experience losses because of careless handling.

ANNOUNCING

QUEEN ROAD REFRIGERATION

IS NOW AN AUTHORIZED DISTRIBUTOR FOR

VM Diesel

"THE DIESEL WITH A DIFFERENCE"

Cuts your power costs because it's way ahead of its time on all points.

AVCO-VM diesel engines are world-proven money-savers. They deliver maximum power efficiency immediately, under any sudden load or climate variation. Their higher power to weight ratios mean NO REDUCTION IN HORSEPOWER to qualify for pollution standards.

They're stingy on fuel, too. Many users report fuel consumption CUT IN HALF — and more — compared with gasoline engines In some installations, our diesels are delivering more than TWICE the hours of operation per gallon of fuel.

Faultless performance is the norm, rather than the exception. A choice of 27 premium quality air-cooled Avco-VM's (5 to 670-hp) means there's one that's right for your application.

Modular, unitized construction means fewer specialized parts, lower weight per hp, lower maintenance costs, 70% parts interchangeability — and they'll fit the tightest space.

Omaha Cattle

June 8, 1978

Weekly 51 – Cattle – compared with the previous week's close – closing prices on slaughter steers were 2.25-2.50 lower and heifers were 1.50-2.25 lower. Cows closed 1.00-2.00 lower and bulls were steady. Four day receipts 14,900 as compared 15,100 previous week and 20,400 a year ago.

For the first time in six weeks, prices on fed steers and heifers were lower than at the end of the previous week. The severe downturn was enforced on Monday in reflection of the combined effects of liberal marketings, a depressed carcass trade and the week end closing of a major slaughterer; only a mild price recovery was made as supplies were sharply curtailed after the initial session. Receipts were quite poorly distributed over the trading period with nearly 60 per cent of the four-day total arriving on Monday. Most buying interests came into the period in need of cattle for near-term requirements and there was a good demand for cattle to be slaughtered outside the immediate Omaha area, but trading was still characterized by a general air of bearishness and caution. There was a fairly liberal volume of choice steers and a modest volume choice and prime; much of the heifer supply was good to average-choice.

STEERS: At midweek high time, three loads choice and prime 3-4 1053-1251 lbs. 60.50-60.75, load choice and prime 3-4 1306 lbs. with sizable percentage 4 60.25. Choice 2-4 1000-1300 lbs. closed 58.50-60.25, load 1175 lbs. 60.50. Mixed good and choice 2-3 975-1250 lbs. 57.25-58.75. Good 2-3 975-1275 lbs. 52.50-57.00. Small lots standard and good 2-3 48.50-51.00.

Average of LS-214, detailed quotations, for choice 900-1100 lb. steers this week 58.75; choice 1100-1300 lbs. 59.18. Average weight steers this week 1139 lbs. as compared 1144 lbs. previous week. Average. Weight heifers this week 976 lbs. as compared 982 lbs. previous week.

HEIFERS: At the close, choice 2-4 875-1050 lb. 55.75-57.50, part loads with end prime 947-1132 lbs. 57.75-58.25. Mixed good and choice 2-3 850-1000 lbs. 54.00-55.50. Good 2-3 47.50-53.50. Small lots standard and good 2-3 42.50-45.00.

COWS: Utility and commercial 2-4 36.00-38.00. Cutter 34.50-36.00. Canner and cutter 31.00-34.00.

BULLS: 1-2 1300-2000 lbs. 44.00-50.00.

Valley Livestock

Valley Stockyards
Athens, Pa.
Monday, June 5

Reported receipts of 322 calves, 137 cows, 88 hogs, 40 heifers, 8 sheep, 2 lambs, 40 bulls, and 10 steers. Cattle market stronger and calf market steady.

Veals 70.00-79.00; bobs, 90-110 lbs. 60.00-68.00; bobs, 80 lbs. and down 40.00-55.00; grassers and feeders 45.00-60.50; lambs 48.00-52.00; sheep 20.00-33.00; hogs, 200-250 lbs. 48.00-51.50; sows 38.00-43.00; boars 32.00-39.50; pigs 30.00-38.00; heifers 42.00-50.00; steers, good 58.00-60.00; steers, common 48.00-50.00; bulls 44.00-51.00; cows, good 42.00-44.75; cows, medium 37.00-39.00; cows, poor or small 34.00-37.00; small horses 225.00-250.00; ponies 25.00-50.00; goats 18.00-40.00.

New Holland Dairy

New Holland Sales Stables
Wednesday, June 7

Reported receipts of 113 cows, 146 heifers, and 10 bulls. Market stronger than last week's market.

Load of Pa. springers 680-905; load of Pa. fresh 580-875; load of N.Y., purebreds and grades, fresh 725-1175; springers 775-1650; load of Butler Co., fresh 535-1025, springers 625-900; local cows 475-900; grade springing heifers 510-800; purebred springing heifers 825-1000; open heifers 240-475; bulls 290-490; herd dispersal of 32 head in all stages of lactation 425-880.

Babcock's B-300V:

The layer that's never been beaten in Pennsylvania Random Sample Testing.

What characteristic do you look for in the layer you buy? High production numbers or efficient feed conversion? Large eggs or low mortality?

Why not pick the layer with the balanced performance that means profit for Pennsylvania egg producers — the Babcock B-300V.

In her very first year of testing, Babcock's B-300V swept the 20th Pennsylvania Random Sample Test, with the highest IOFCC for both divisions - cage **and** floor.

Test results below confirm field reports we've been receiving on the B-300V's outstanding performance - top egg production, great livability, competitive feed conversion, legendary resistance to stress, **plus** strong, beautiful shells.

STRAIN[3]	IOFCC[1]	HEN-HOUSED PRODUCTION[1]	% LARGE & X LARGE[1]	LBS. FEED/ LBS. EGGS[1]	% MORTALITY[1]	BODY WT. LBS.[1]	SHELL BREAKING STRENGTH LBS.[2]
BABCOCK B-300V	6.41	265.9	99.0	2.35	2.05	4.1	9.6
HISEX	6.24	263.6	96.9	2.49	5.60	4.1	8.5
DEKALB XL-LINK	5.91	264.5	95.5	2.51	2.55	4.2	8.7
SHAVER SX-288	5.90	259.3	100.0	2.44	4.10	4.7	8.9
HUBBARD	5.23	244.5	93.4	2.46	6.60	4.4	NA

[1] Combined results, cage and floor, 20th Pennsylvania Random Sample Test.

[2] Multiple Performance Testing . . . ask your Babcock representative for test results.

[3] Hyline and H&N were not entered in Pennsylvania R.S.T.

If you're looking for profitability in the layer you buy, you're looking for the Businessman's Bird. Babcock's B-300V... first choice of poultry businessmen wherever eggs are produced at a profit.

Figure it for yourself.

You're money ahead when you feed Milk Replacer No. 22.

Trying to figure a way to get calves off to a healthy start at less cost?

You're money ahead when you feed Milk Replacer No. 22. This high-energy product contains 20% fat and extra levels of milk sugar along with just the right balance of vitamins, minerals, and milk proteins — plus antibiotic.

For every 50-lb. bag of No. 22 you feed, you sell an extra 600 pounds of milk.

That's extra money in the bank, and your figures will prove it.

Build your own starter for less.
After two or three days on Milk Replacer No. 22, your calves will be ready for an 18% protein starter.

By using your own grain, soybean meal, and Vigortone's Kalf Ayd No. 23, you grind and mix your own starter for a lot less than commercial products.

Not only will your 18% starter ration be fresher because it's homebuilt, but it'll be highly fortified with vitamins, minerals, trace elements, and antibiotics — thanks to Kalf Ayd No. 23.

Your calves will do better, and your farm record book will, too.

Now is the time to compare.
See your Vigortone dealer soon. He's ready to compare the performance of Vigortone's low-cost dairy feeding programs with any other you name.

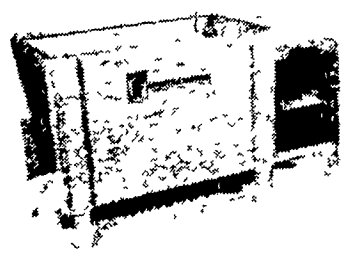
FAVORITE START GROW SYSTEMS

FEATURES:

- Double galvanized back-bottom.
- Unique start-grow cage front design.
- Start-grow cage bottom with 1" x 1" wire.
- Grow cage bottom with 1" x 2" wire.
- Start-grow cages notched for waterers.
- Start-grow cage waterers adjustable from outside of cage.
- Swinging cage doors lock open or closed.
- Partitions designed to eliminate bird movement between cages.
- Galvanized feed-saver chick guard.
- Flat chain and trough feeding.
- Feeding speeds up to 60 feet per minute.
- Hi-Torq speed reducer with three year warranty.
- Adjustable positive-lock hopper feed gate.
- Positive feed return to feed hopper.
- Rugged feed-chain corner assemblies.
- Unique feed manifold.
- Works well with heating system of your choice.
- 24" wide, 26" deep, 14" high.
- 30" wide, 26" deep, 14" high.

FAVORITE FLOOR FEEDING SYSTEMS



- Designed for single and multiple circuits.
- Hi-Torq speed reducer with three year warranty.
- Flat feeding chain speeds up to 60 feet-per-minute.
- Positive feed return to feed hopper.
- Adjustable, positive-lock hopper feed gate.
- Several feed saving trough designs.
- Anti-roost grill for feed troughs.
- Mini 1- and 2-line hoppers for suspended feeding systems.
- Standard 1-, 2-, and 4-line hoppers, with adjustable legs.

FAVORITE "CAL-AIR" CAGE SYSTEMS

FEATURES:

- Shallow (reverse) cage design.
- 4-Deck or 3-Deck configurations.
- No dropping boards or scrapers required.
- Double galvanized back-bottom-egg tray.
- Cages with angled fronts.
- Cage doors in front.
- Bottom partition wire is welded to precise slope of cage bottom.
- Flat chain and trough feeding.
- Feeding speeds up to 60 feet per minute.
- Hi-Torq speed reducer with three year warranty.
- Adjustable, positive-lock hopper feed gate.
- Positive feed return to feed hopper.
- Rugged feed-chain corner assemblies.
- Unique feed manifold.
- Simplified egg collectors.
- Flexible egg collector cups.
- 12" egg collector cross-belt.
- Cross-belt runs underneath egg collectors.
- Easy access to all decks.
- Floor stand or hanger support systems.
- 12 inches deep in various widths.

Gypsy moths -- a perpetual problem

By JOANNE SPAHR

HARRISBURG – They're just another example of man sticking his fingers where they didn't belong and ending up with a mess on his hands.

"They" are gypsy moths, and they're a problem.

Back in 1868 a Frenchman who was researching the silk-producing abilities of this common European moth imported a few into Massachusetts. While there are slightly different version of the incident leading to their release, basically, a high wind set the moths free from their confinement and scattered them over the countryside.

Today, they are a problem.

Last year, alone, gypsy moth caterpillars visibly defoliated 1.3 million acres of trees in eastern Pennsylvania, and this year's situation is expected to be worse than in 1977.

The caterpillar stage is the point at which they are destructive. The caterpillars eat the leaves of hardwood trees, preferably oak, and heavy infestations strip trees of their leaves. In some cases, there is 100 per cent defoliation, and at that time, a mid-July forest area can have a "dead of-Winter" appearance.

Although it is difficult to generalize, William Slippey, control operations section supervisor for the Department of Forest Pest Management with the Bureau of Forestry under DER, says that after one defoliation there can be as much as five per cent mortality rate in trees; after two consecutive years of defoliation, 15 to 30 per cent; and after three consecutive years of defoliation, as much as 50 to 60 per cent mortality.

"There is an area in Pike County, primarily forest land, where we do have over 50 per cent mortality," points out Slippey, "and in some sectors, there is an 80 per cent mortality in oak."

Not only do they defoliate and in some cases kill trees, but these caterpillars also can cause mental aggrevation to the individuals living in infested areas.

"There have been stories of people having nervous breakdowns in the Poconos from the caterpillars," notes Maurice Hobaugh, Valley District 17 forester, "People just can't stand having millions of those caterpillars dropping out of trees and invading their homes," he states.

Although some written accounts state that the mental anguish caused by gypsy moths is greatly exaggerated, the problem caused by the caterpillars is definitely a nuisance. For example, individuals have reported that a heavy infestation can cause car tires to spin and can force home owners to remain inside their homes.

How serious the problem is in Pennsylvania is hard to assess. According to Slippey, who has supervised government spraying programs in Pennsylvania for the past eight years, the Commonwealth's problem areas are broken down into woodlots with some wooded ridges, which makes analyzing the problem difficult.

"The gypsy has been in Pennsylvania for several years," he states, "some areas are worse than others; in some areas they are collapsing or cycling. In other words, the gypsy moth is in a state of flux."

Hobaugh noted that most of Lancaster County is in the "moderate defoliation" class. Moderate defoliation refers to 36 to 60 per cent defoliation. Hobaugh went on to say that there are some spotty areas in Lancaster County which have 61 to 70 per cent defoliation, and some areas in upper Chester and lower Berks Counties have 100 per cent defoliated trees.

To combat the problem, several avenues are presently being taken. According to James Nichols, chief of the division of Forest Pest Management with the

Forage-ability PLUS!
The big-capacity Field Queen 7600 from Hesston. Unmatched in its class!

Model 7600 is also available with a 350 rotating truck spout that lets you blow forage to either side of the machine Unique hydraulic rebevel grinder (optional) lets you maintain knife bevel right in the field

Rugged 210 hp Cat diesel delivers plenty of power. Hydrostatic drive matches ground speed to field conditions while you maintain optimum cutter speed Rear wheel drive gives you unmatched traction — particularly when pulling wagons Short, direct crop flow — from header to blower — needs no power-robbing conveyors or augers And the unique Heart-of-Steel cutting cylinder helps increase efficiency with scissor action that cuts, not chops, forage.

Multi-crop versatility The Field Queen 7600 can be fitted with headers for every need. 7 windrow pickup, 2- and 3-row crop heads, direct cut, ear corn snappers, stover head and more And the Command Post Cab is one of the quietest, most comfortable ever put on a forage harvester Take a closer look at the Field Queen 7600 from Hesston today

Tobacco planting begun

(Continued from Page 1)

Washington Boro R1, who, along with his son, Robert, plans to plant 35 acres this year, said on Wednesday eveing that up to that day they had 10 acres planted.

"We started on June 1," he said.

This year Burkholder, who farms the Richard Mann farm, is pleased with his plants.

"They are plenty thick," he stated. "They're a little late because we had a cool April, but they look good."

Burkholder's cousin, Ezra Burkholder, Washington Boro R1, also started planting early – on June 1 – and he notes that, so far, he is pleased with his plants, also.

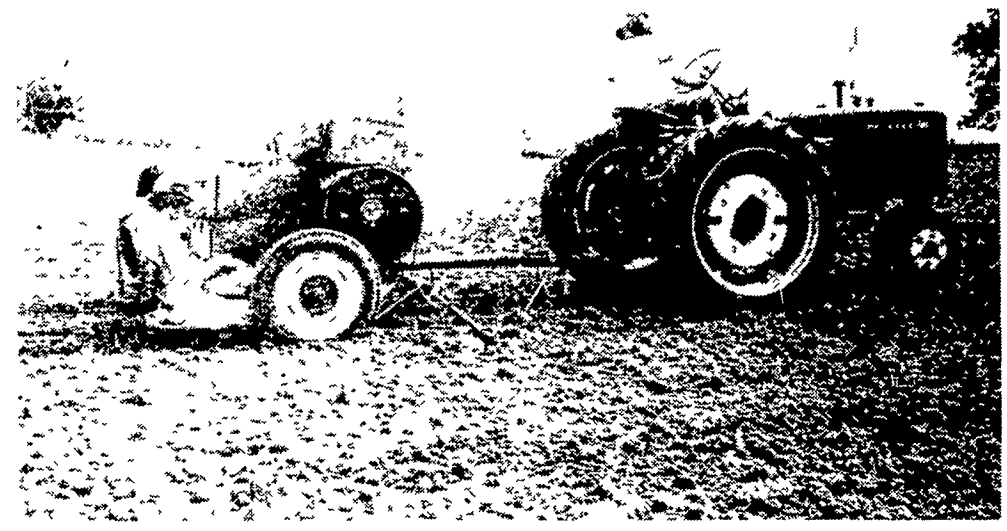
"They're better than some years, I'd say," reports Ezra Burkholder. By mid-week Burkholder, who intends to plant 14 acres, had 3½ of those acres in the ground.

The Burkholders were exceptions, for the most part. On the whole, farmers in the Central Manor area began planting by mid-week and had about one to two acres in the ground.

The Larry Fry family Washington Boro R1, is one family who held off until the end of the week. Although Mrs. Fry reports that their seedling beds look "really good" and are "as filled up as usual," she and her husband are waiting until their plants have a little more size to them. If the weather conditions are good, they have hopes to start planting today (Saturday).

In the New Holland area, where a good number of plants are raised under plastic, planting has also been going on for about a week.

All growers contacted do report, however, that because of the cool Spring, the tobacco crop is behind last year on the average.



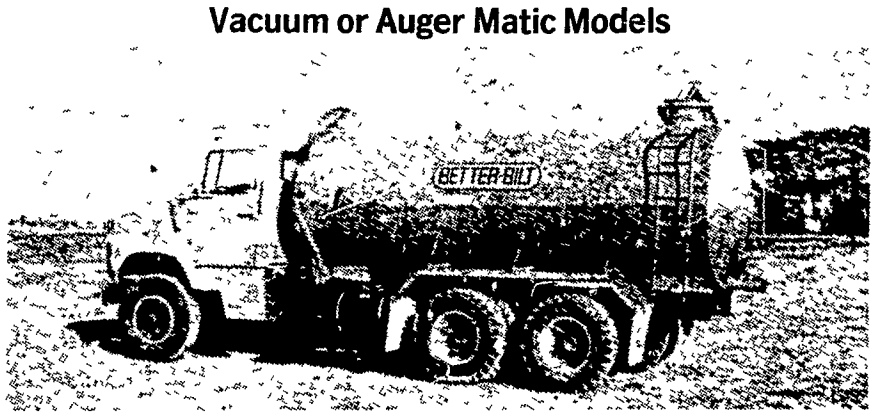
Tobacco planting began this week in several areas of Lancaster County. This picture was taken on the farm of Lester Weaver near New Holland.

Power Complex

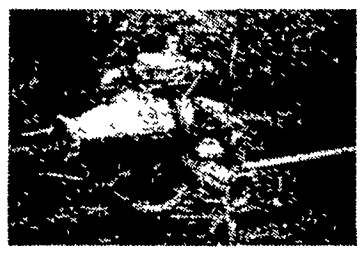
Brazil and Paraguay are currently building the world's most powerful hydroelectric complex — Itaipu When completed, it will generate 70 billion kilowatt-hours of energy annually America's Grand Coulee, for example, produces 20 billion

"BETTER-BUILT" LIQUID MANURE HANDLING EQUIPMENT

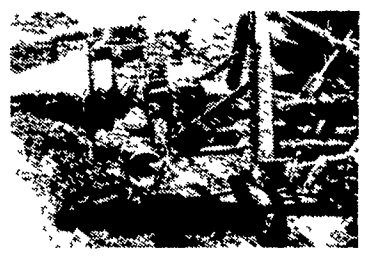
TRUCK MOUNTED LIQUID MANURE SPREADER
Vacuum or Auger Matic Models



TWO WHEEL TRAILER MODEL

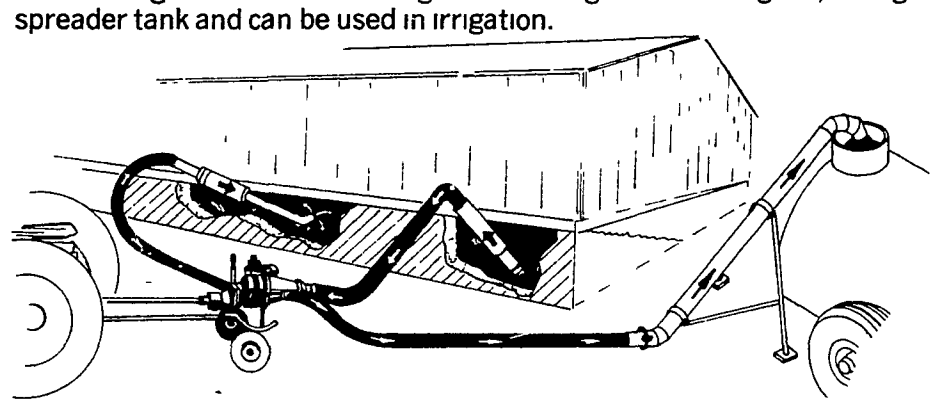


TWO MODELS 800 GPM OR 1200 GPM 3-POINT HITCH MODEL



HIGH PRESSURE PUMP

The "Better-Bilt" High Pressure Pump is designed for: pit agitation, transferring manure to above ground storage or to a lagoon, filling spreader tank and can be used in irrigation.



Material is drawn through a regular 6" suction hose into the pump. The material passes through a cutter block breaking up chunks of solids and cutting other foreign material prior to its entering the impeller. The impeller produces a tremendous amount of pressure discharging through a 4 inch pressure hose to a directional pit agitator at the rate of 800 or 1,200 G.P.M (depending on pump size) at 70 plus pounds of pressure to blast those solids into suspension.

Optional two way valve system attachment will allow you to either direct the manure back into the pit for agitation or direct it to a loading stand for the filling of a spreader, transfer to another storage area or to irrigation piping without interruption.

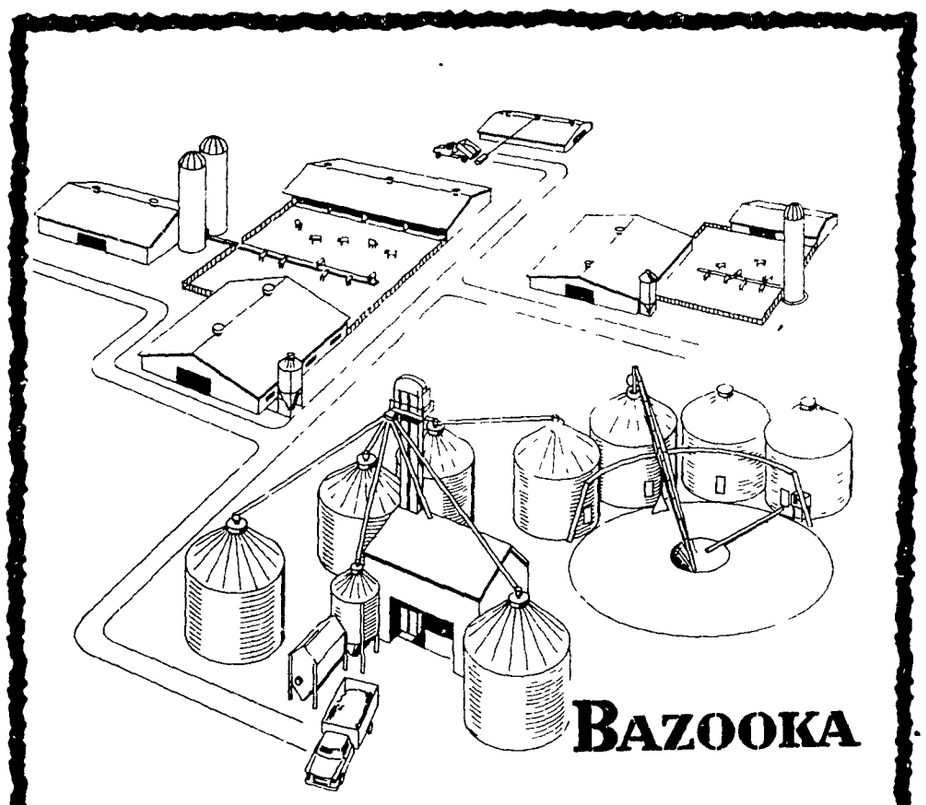
BROCK®

Brock grain bins are famous for their strength, durability and good looks. But with Brock you'll get far more than just a great grain bin.

You'll get a great dealer. A grain storage expert who can help you with system planning, financing, and installation.

That's why they chose us to be a qualified Brock dealer. And that's why you should see us today. We have a grain storage and handling system to meet all your needs.



BAZOOKA

We'll help you put it together

Tell us what you need, and we'll design and install a complete new system for you, or modernize your present set-up.

Bazooka augers and U-trough conveyors keep your systems going longer . . . smoother . . . safer.

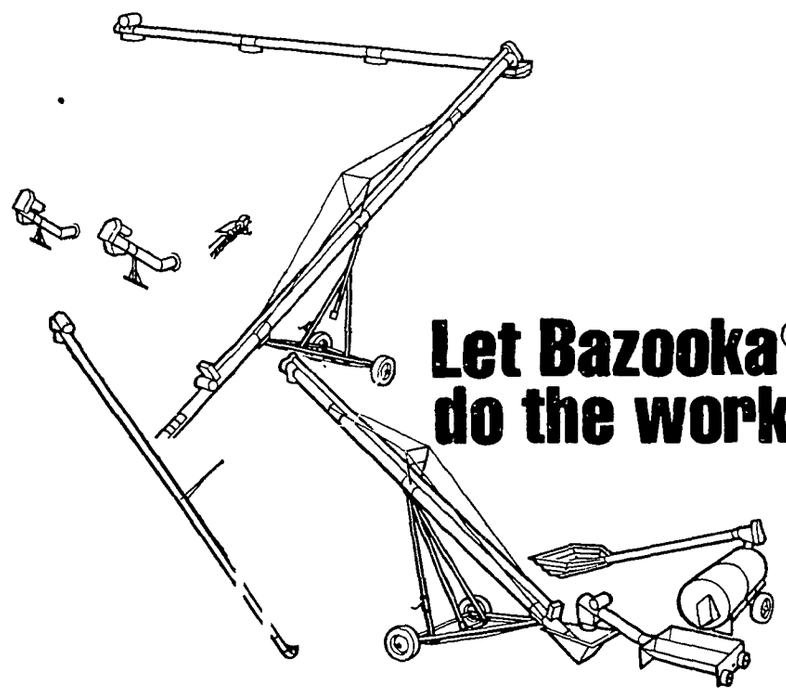
BAZOOKA®
GRAIN MOVING SYSTEMS

Components that move grain can be as important as the storage bins or drying bins you choose. Augers are the heart of your system because they do the work . . . keep you going during the busy harvest time.

Bazooka augers are long lasting and smooth running. You have a wide choice of capacities, accessories and drives. You can also expand any Bazooka system with a minimum of expense.



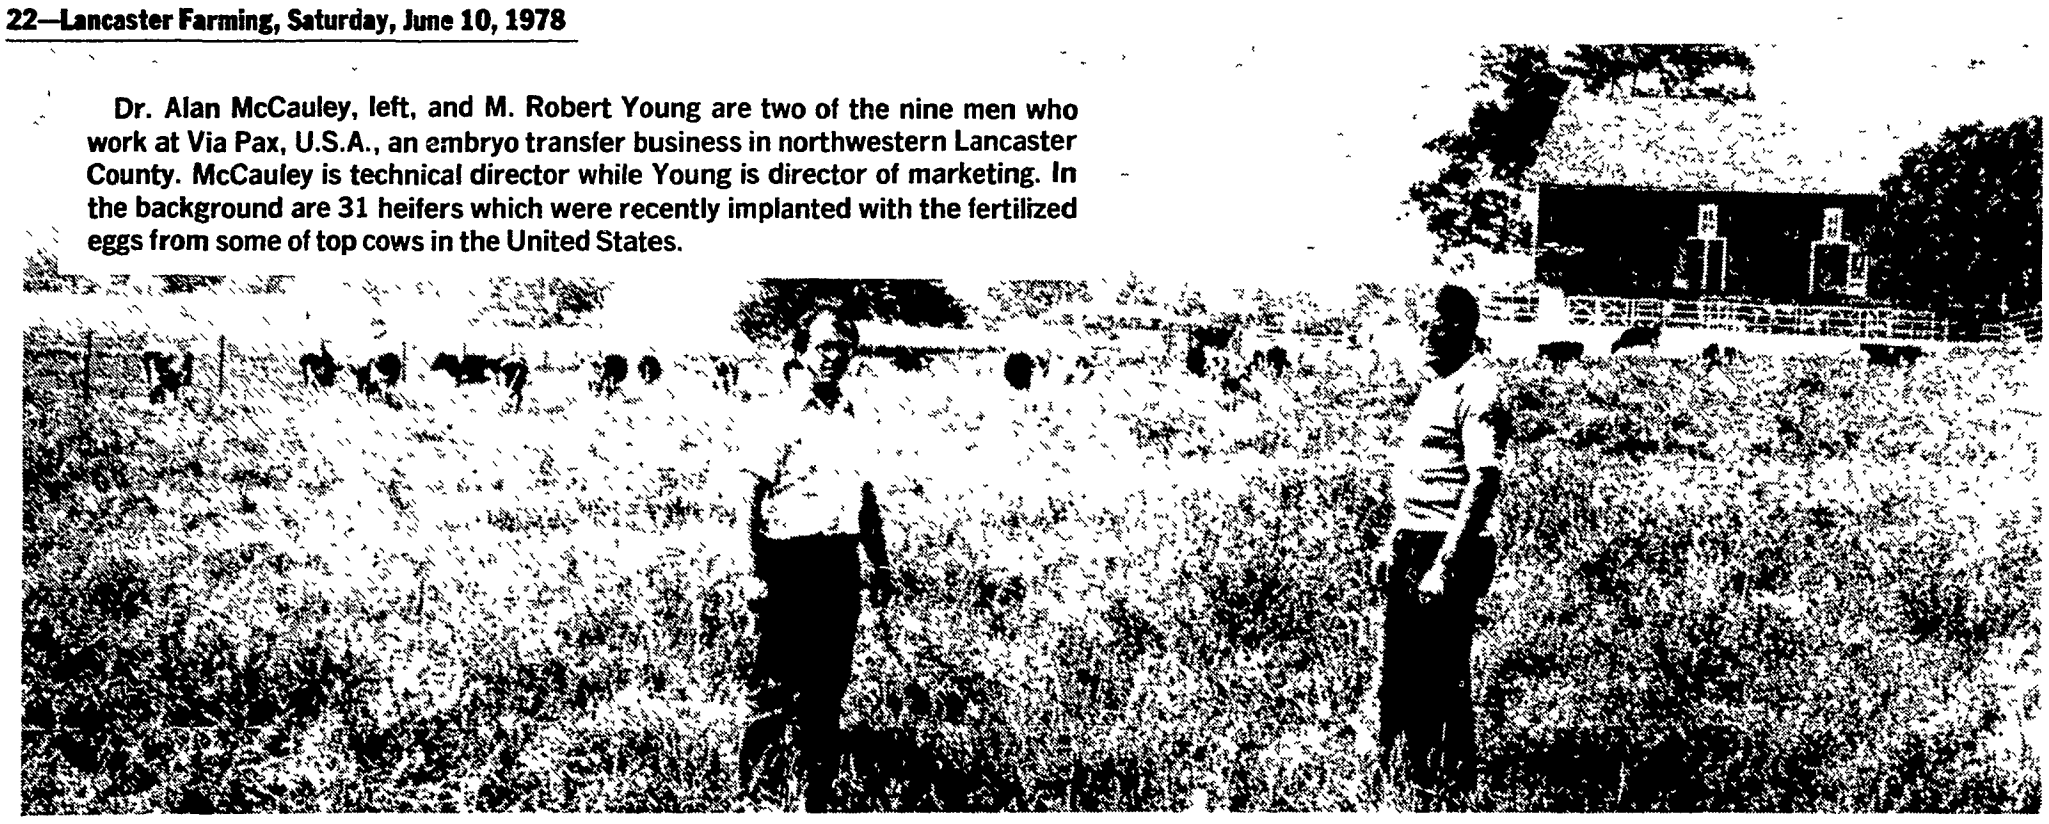
Let Bazooka® do the work!

BAZOOKA transport augers have chrome-plated intake flighting that doubles its life, a galvanized drive shaft that reduces maintenance time, and permanently lubricated, precision machined chain reducer drive with cast iron housing. Plus many other timesaving, convenience and safety features.

BAZOOKA transfer augers have important differences at the drive end, like heavy duty thrust bearings; machined, cast iron sheaves, and easily adjusted motor mounts supported equally on all four corners.

BAZOOKA sweeps and unloading augers can make quick work of emptying out a bin. Portable types can be moved from one bin to another while permanent types are driven by powerheads located outside the bin.

BAZOOKA Grainclean'r is a rotary type scalper/cleaner with a built-in fines collector.



Dr. Alan McCauley, left, and M. Robert Young are two of the nine men who work at Via Pax, U.S.A., an embryo transfer business in northwestern Lancaster County. McCauley is technical director while Young is director of marketing. In the background are 31 heifers which were recently implanted with the fertilized eggs from some of top cows in the United States.

The female version of A.I.

Embryo transfers are making it possible for one cow to have dozens of offspring

By DIETER KRIEG

RHEEMS – Dairymen with top quality cattle have a relatively new concept to consider which can significantly increase the number of offspring they might get from their best cows. Although the practice -- known as embryo transplanting – is rather costly, it's now possible to have dozens of calves from a top cow. The economic returns can be just as astounding, despite the relative costliness of the procedures involved. Consider, for example, that the breeder has a cow whose bull calf is worth $5000. Ova transplanting can increase such sales potential ten-fold and more.

There are now about 15 embryo transplanting companies in the United States, all of them having come into existence since 1972 when the idea of embryo transfer first became available in North America. One of these firms is Via Pax, Inc., a division of Via Pax International. It has one center of operations in Milan, Italy, another at Woodbridge, Ontario, and a third in northwestern Lancaster County, near Rheems. While interest in embryo transplanting was slow at first, it is growing rapidly and it's expected that in many respects it will parallel the path of artificial insemination.

One of the recently heralded milestones which is boosting interest and success in embryo transplanting is the frozen embryo technique. As was

Embryo transfers

(Continued from Page 22)

the case nearly two decades ago when frozen semen became available on a wide scale, the frozen embryo concept is opening many doors and promising tremendous potential.

Embryo transplanting is in essence a simple technique, but because of the delicate life involved it is not always successful. Simply stated, the transplanting technique involves the taking of fertilized eggs (or ova) from the cow and surgically inserting them into other cows or heifers. These recipient animals thereby become mothers of the calves that are to be born. But they themselves offered none of the genetic material. Phrased another way, the recipient cows or heifers are "incubators" for the developing embryo.

Astonishing progress has been made with this new concept in breed improvement. For example, Via Pax technicians recently flew to Wisconsin, flushed four cows of their embryos, isolated them, packaged them, flew back to Baltimore, drove to Rheems, and began surgical implantation all in the same day. The four cows they had flushed yielded 26 embryos within a four hour period. Flying and driving time took up much of the day. They were back at their Rheems headquarters at 9:30 p.m. and began the surgery on 26 recipient animals By 3 a.m. the entire operation was completed.

Shipping embryos overseas in saline solutions is already commonplace. While demanding of both time, money, and expertise, the shipping of embryos is economical. One reason is that the freight charges for overseas shipments of heifers, cows, and bulls can be qute high.

This is just the beginning, say experts in the field.

"With the advent of embryo freezing, non-surgical transfer of embryos, and possible sexing, this service has a lot of potential," says M. Robert Young, director of marketing for Via Pax, U.S.A. "Futuristically speaking, it's very possible that we'll be able to store embryos like semen within the next couple of years," Young commented.

Embryo transplanting isn't for everyone. Young and his associates recommend that any cow being considered for such an operation should have at least the following qualifications: She should be from a family out of which bulls could be sold to A.I. studs, or, if heifers are born, they should be worth at least $2500 at birth.

Via Pax is presently restructuring its prices in

Cherries

(Continued from Page 1)

favorable, the end product will be well worth the wait.

"The quality looks very good, so far," says Ben Lapp, Christiana, who has about three acres of cherries that he markets via pick-your-own. "They should get pretty big."

Other orchardists in Lancaster, York, and Adams Counties back up Lapp's statement saying, on the average, the crop looks very good, and barring hail or rainy weather close to picking time, the fruit should be excellent.

"It's really too early to tell for certain," points out a representative from Blevins Fruit Farm, Stewartstown, York County.

Blevins has a full crop of sour cherries and about a 75 per cent crop of sweet cherries. On the average, the turnout for Blevins' crop is higher than for other orchards in Lancaster Farming's coverage area.

Most estimates from growers contacted show that the cherry crop for this year is anywhere from 50 to 75 per cent full.

"We have 65 to 70 per cent of a crop because around May 1 we had a hard frost," says P. Joseph Raab, owner of Raab Fruit Farms, Dallastown, York County. Raab has about 12 acres of cherries and, due to the frost, he lost the crop in his lower orchard. However, the trees on the higher elevations made it through the frost unscathed. Raab operates almost strictly on a pick-your-own basis.

Ben Lapp also reports that he has only 50 to 60 per cent of his crop. Rather than the frost or the rain, Lapp believes that Winter damage is to blame for his less-than-full crop.

Says Richard Haas, owner of Cherry Hill Orchards, New Danville Pike Lancaster, "This year's crop looks the same as last year's. It's not a bumper crop, but it's a good crop." He anticipates opening his orchard on the weekend of the 24th through the 26th.

Carlton Groff, of Groff's Orchard, in Kirkwood, also reports that his crop is shaping up like last year's. His sour cherries are exceptionally good.

Clair E. Winand, farm supervisor for the Musselman Division of Pet Inc., says that, on the whole, Adams County has ½ to ⅔ of its crop.

"I get around to pretty many growers," notes Winand, "and Id say we have 50 to 60 per cent of our crop. That's about 10 per cent better than last year."

Winand, who manages 235 acres of cherries for Musselman's, also noted that the fruit on the lowlands are pretty well frozen out.

Phillip Pitzer, the president of the Adams County Fruit Growers Association, on the other hand, is highly enthusiastic about his crop.

"My crop is much, much better than last year," he remarks. "It's at least double, or maybe three times, as good as last year." In some cases, Adams County orchardists only had a 20 per cent turn out in 1977 due to frosts.

"We are finding that this crop is very, very spotty, though." he adds.

There is also an extra problem this year. Unlike other years, this Spring's crop is scattered.

"Some of the trees have big clusters, others don't," remarked Richard Haas.

"It's not going to be good for ladies to pick this year," notes Ben Lapp, thinking of his customers. "The people will have to climb higher for cherries. There will be some you can pick right off the tree, but people will need ladders more this season."

Mac Lott, from Bonnie Brae Fruit Farms, Gardners, says that his crop of cherries is not consistent, either.

"It's unusual," he notes, although he does point out, also, that the quality so far looks pretty good.

Although it is really too early to set prices and many orchardists refuse to estimate, the general feeling is that the prices will have to be as good as last year, and maybe even higher.

"The warehouses are pretty well sold out," notes Winand, "and we're coming through with a half crop, so you can figure the prices will be good."

At this point the crop still has some important weeks to get through before picking time.

"This rain we're getting now is welcome," notes Philip Pitzer, the president of the Adams County Fruit Growers Association, "We need it for a boost. But, when they stop growing, we need some dry weather for them to sweeten up."

It will only be a few more weeks until the results are known.

Craft Days set June 17 and 18

LANCASTER – The 23rd annual Craft Days festival will be held at the Pennsylvania Farm Museum, Landis Valley, on June 17 and 18. The festival will feature over 40 live demonstrations of crafts and skills practiced in early rural Pennsylvania. Visitors will be given an insight into the lives of farming families in the 18th and 19th century.

Demonstrations to be viewed include woodwork, whittling, wood-turning, cabinet making, metal working, tinsmithing, blacksmithing, quilting, cross stitch embroidery, rug hooking, scherenschnitte, fractur, egg scratching, and other skills including gunsmithing, theorem painting, open hearth cooking, stone carving, chair caning, lace making, and basket making.

Special activities include operation of a Conestoga Wagon drawn by six horses, a shooting exhibition with flintlock Pa. long rifles, operation of two late 19th century steam tractors, and performances of traditional folk music.

Craft day activities are scheduled from noon to 5 p.m. on both days.

Carter

(Continued from Page 1)

than help consumers of beef."

"The administration is trying to create the impression that it is helping consumers at a time when beef prices have been rising," said Richard McDougal, NCA president. "However, this action is just another cosmetic approach to the problem of inflation – which is largely government caused," he said.

The NCA statement went on to explain that Carter's decision would discourage cattlemen from rebuilding their herds while having little effect on average retail prices.

"With the industry finally starting to make a profit," McDougal continued, "the administration chooses to play political games with the laws of supply and demand. It is destroying the very incentive that is needed to rebuild herds and eventually bring larger beef supplies and more moderate prices."

An Adams County cattleman, Frank B. Darcey, Jr., told **Lancaster Farming** in a Friday morning telephone interview that he personally, as well as numerous organizations of which he is a member, find Carter's decision unfair and ill-conceived. He does acknowledge, however, that the decision to import beef could have been much worse. Darcey figures that the beef industry's lobbying efforts may have tempered Carter's final decision somewhat.

Nonetheless, the Adams County Hereford breeder views Carter's decision with doubt.

"We're in the same position as the consumer, and we don't want the consumer to rebel, as he might because of the rising beef prices," Darcey began. "But with this action we could face a real beef shortage down the road." Pointing out that there are very few cattle in the nation's major beef producing areas, he foresees possible shortages in the future and another price spiral this Fall. Carter's action on Thursday could also discourage many cattlemen, thus putting a damper on expansion plans.

"There's been too much meddling by the government," Darcey observed, adding that the Adams County Beef Producers Association, of which he is a former president and founder, had lodged a formal complaint on the matter with Congressman William Goodling.

Darcey considers Carter's beef import plan ill-conceived for several reasons.

"This just means that there are many more dollars leaving the country, fueling inflation, and adding to our already imbalanced trade deficit," the beef producer noted. "It's downright unfair," he continued. "The beef industry doesn't ask for federal money. We don't like the peaks and valleys in prices any better than the government and consumers, but if they'd just realize that it's the boycotts and government intervention that cause the peaks and valleys we'd be a lot better off. If they'd just let things run their course it would straighten itself out. When you mess with an industry – and the cattle business is an industry, the nation's biggest agricultural industry – it's just like fooling with Mother Nature," he said.

Darcey noted further that cattlemen did not want prices to skyrocket the way they did. They would have preferred moderate increases and not the headline-making high prices seen in recent weeks.

Agriculture Secretary Bob Bergland commented a week ago during a television interview that any opening on beef imports would have no great effect on cattle prices. He noted that there is a world-wide shortage of beef and there would be "no great influx even if all quotas were removed because there just isn't that kind of inventory around."

While President Carter was being pressured by his advisors to increase beef imports, Congress was in fact considering legislation to restrict such trade. The Senate had already passed such a measure. Bergland commented during the TV interview that he would recommend that the bill be vetoed by the President. He at that time did not feel that there would be any change in beef imports.

The cattle industry, however, felt something in the wind weeks before Carter made his controversial announcement.

Despite the increase in beef, beef prices are expected to remain strong all Summer, says USDA. Secretary Bergland defends that reasoning because there are 16 million fewer cattle in the country today than there were a couple of years ago. "Cattlemen had to reduce their herds because they weren't making any money and the drought in the West last year also forced them to reduce cattle numbers," he explained.

The Secretary said Thursday that the foreign beef would be mostly lean, grass-fed meat which would be blended with cuttings from fat American cattle to make hamburgers. He doesn't expect any effect on prices until late July or early August and predicts that there'll be no effect at all on the expensive beef cuts.

The Administration supports its philosophy because Americans supposedly want more beef than is available. Americans are consuming 125 pounds of beef per person, said Bergland. "There isn't enough beef in the world to sustain that rate for the two or three years needed to rebuild domestic herds," he said.

While the news of increased imports is being welcomed in Australia and New Zealand, where cattlemen have been hurting worse than their American counterparts, U.S. cattlemen aren't convinced that the Carter Administration's plan will help one bit to put domestic beef supplies on a track towards adequate supplies and reasonable prices. Instead, they feel that this action will just aggravate the situation and lay the groundwork for more severe shortages in months and years to come.

Chester Co. rams top performance sale

UNIVERSITY PARK – Two Chester County sheep breeders had the top indexing rams in their respective breeds in Penn State's 2nd Annual Performance Ram Test and Sale. William J. MacCauley, Jr. of Atglen had the highest indexing Suffolk ram with a score of 121 and Warn G. Menhennett, Cochranville, had a Shropshire Ram 563, who topped the Shropshires with an index of 110. These rams were on test for 90 days at Penn State's Meat Animal Evaluation Center.

Menhennett's ram was also the top selling Shropshire ram at the Performance Tested Ram Sale on June 3rd. It sold for $320 compared with the breed average of $195. MacCauley's ram, a single lamb born in March, was well above the breed average when it brought $380 as compared to the $294 average.

The top selling Suffolk was a triplet ram owned by Paul H. Leader of York, Pa. In index it ranked third among the Suffolks with a 116 ratio while a Penn State Suffolk stood in second place with an index ratio of 117.

All breeds represented in the test and sale showed healthy increases in sale prices with the exception of Southdowns. Prices were generally 20 per cent better than last year. Breed averages were as follows: Cheviots $100, Dorsets $241, Hampshires $190, Shropshires $195, Merions $80, Southdowns $67.50, Suffolks $294, and Oxfords $170.

The Menhennett Shropshire Ram 563 topped the Shropshires with an index of 110. He sold for $320.

Seen holding his father's ram, Billy MacCauley, shows the Suffolk ram that topped the Suffolk breed. The ram was sold for $380.

Embryo transfers

(Continued from Page 23)

order to offer embryo transplanting at a cost of less than $1000 per pregnancy. There are many variables, however, such as traveling distances. One sure-fire way to cut costs is for the farmer to provide his own recipient animal. "The biggest problem with embryo transfers is the non-availability of open heifers," says Dr. Alan McCauley, technical director for Via Pax, U.S.A. If the dairyman does not have a cow or heifer available, Via Pax will buy one and charge the farmer for the additional costs.

While price reductions are already being considered, more are sure to come as the technique advances. For example, Young predicts that non-surgical transfer of embryos will be possible by next year. When that happens, the costs of surgery will be eliminated.

Embryo are presently being inserted into recipient animals by way of an incision in the area just below and forward of the hip or hook bone. Via Pax specialists envision future implantations similar to techniques presently being used in artificial insemination.

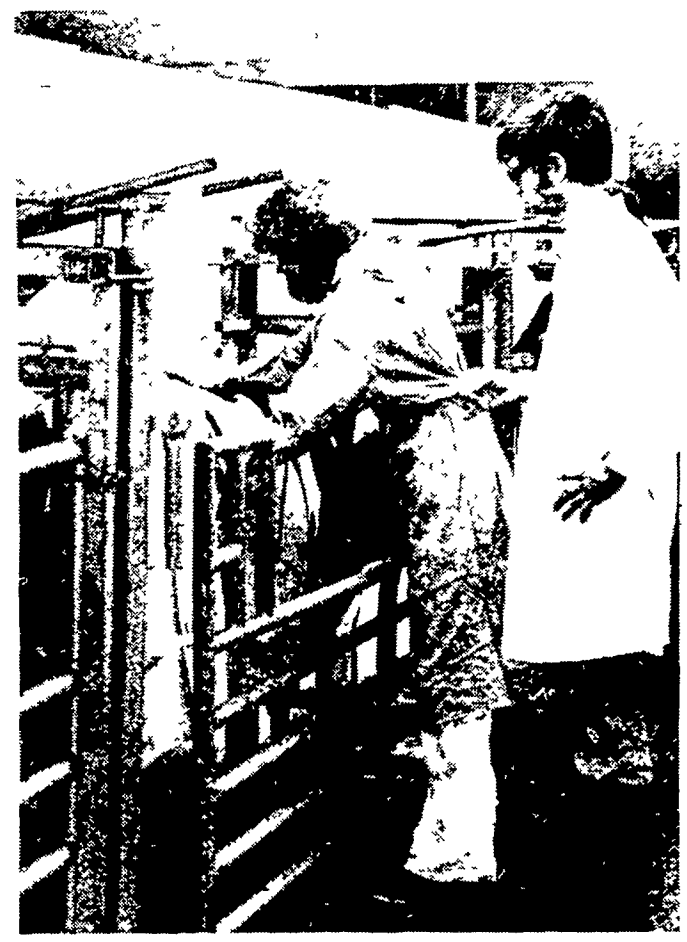
Flushing a cow of her fertilized eggs is a comparatively easy procedure, but again, a delicate operation.

Via Pax begins its procedures with super ovulation. With this technique, the cow releases several eggs, instead of just one. The animal is bred and after about a week to 11 days, the fertilized eggs are flushed out of the cow. Technicians then examine the fluid with a microscope and isolate the developing embryo. Once that's done, the recipient cow or heifer is brought into a stall for surgery. A local anesthetic is administered, the surgeon makes a 4-inch incision, and the embryo is transplanted. Via Pax can perform eight such operations in less than 90 minutes.

In business since Jan. 1 of this year, Via Pax, U.S.A. averages a success rate of around 55 per cent. During one month 73 per cent of the transplanted embryos resulted in successful pregnancies. Dr. John Hasler, a University of Illinois graduate with four years of experience in embryo transfer work, admits that a 73 per cent success rate is unusually high. Since some operations will not result in calves, the operation is priced in two stages: 1. a fee for the services involved, and 2. a full price if pregnancy occurs.

Via Pax performed 69 embryo transfer operations in April and 67 last month. "Interest now is far greater than it was in the beginning," Young commented. Young, who grew up on a dairy farm in the Elizabethtown area, and until eight years ago spent most of his occupational time with a business in Lancaster, has been very interested in embryo transfer work for two years. Superior Holstein cattle have been one of his primary

(Turn to Page 32)



A recipient heifer shows no signs of discomfort or malcontent as Dr. Stephan Sheridan reaches into her side to find the uterus. Dr. John Hasler, with pipette in hand, waits to deliver the tiny embryo into the recipient animal. Via Pax has eight such stalls for embryo transplant operations.

SOURCE OF INFORMATION - PENNSYLVANIA DEPARTMENT OF AGRICULTURE
CROP AND LIVESTOCK ANNUAL SUMMARY — JUNE 1978

over $15 million the year before. Acreage stayed the same at 80,000. Tobacco acreage dropped a bit, to 11,960 acres, but the crop's value moved up by $1.1 million – to $13,948,500. Average production last year was 1944 pounds per acre, compared to 1747 pounds the year before.

Despite the drop in numbers and dollar value, the big and far-out-in-front kingpin of Lancaster County agriculture is still the dairy business. At $101,262,000, the Garden Spot's dairy productivity accounts for more than a quarter of all commodity values. It's nearest rival is the cattle and calves segment, which is valued at $89,407,300, up from $87,846,000 in 1976. Close behind is the poultry industry which registered a value of $33,534,000 for broilers, $44,794,000 for layers and eggs, and $8,514,700 for other flock categories, bringing the total to $86,842,700. That's an increase in total value of nearly $10 million from the year before – a fact which is unmatched by any other segment of agriculture in the county.

Recording the most noteworthy advance in the poultry category were the owners of laying flocks. The number of layers increased nearly 30 per cent since the last report from 3,428,000 birds in 1976 to 4,029,900 birds in 1977. Product value skyrocketed from $40,092,000 in 1976 to $44,794,000 last year. The broiler industry also has something to crow about. Their numbers increased from 28,349,000 in 1976 to 33,268,000 last year. Their value came up from $31,034,000 in 1976 to $33,534,000 last year.

Other poultry segments, such as turkeys had a value of $8,514,700 last year, compared to just $6,321,200 in 1976. No figures were released on flock sizes and total numbers.

Swine production is on the upswing in the Garden Spot. Numbers have been growing steadily over the years: 169,100 head in 1975; 180,300 head in 1976; and 197,000 head last year. Their value for 1977 was $11,741,000, compared to $8,456,000 in 1976, and $12,213,600 in 1975. Higher pork prices accounted for the higher value in 1975.

While the value of cattle and calves has certainly held its own, cattle and calf numbers dropped here, the Crop and Livestock survey revealed. The 234,000 head counted

(Turn to Page 29)

Garden Spot's

(Continued from Page 1)

the state for "other" phases of poultry agriculture such as turkeys, and is third in sheep production.

All segments of animal agriculture showed moderate to good gains except dairy and sheep. Both recorded a drop in total product value as well as numbers. Sheep, for instance, plummeted from 7900 head in 1975 to 7100 in 1976 and just 5300 head in 1977. Dairy cows fell from 85,800 head in 1976 to 83,700 last year.

The dairy segment of the Garden Spot's agricultural economy jumped a phenomenal $19 million in 1976 – to $102,480,000 – but dropped by just over a million in 1977 – to $101,265,000. The value for sheep dropped from $203,100 in 1976 to $194,100 in 1977.

Total value of livestock and poultry for last year was $289,450,300, compared to $276,432,300 in 1976. Poultry, cattle, and calves and hogs accounted for all the increase.

Total value of crops grown in the county increased from $85,737,000 in 1976 to $96,200,830 last year. The corn crop led the list with a total value of more than $49 million. That divides about equally for silage and grain corn, with grain having a slight edge. The year before corn for grain led with $27,569,000. The Garden Spot's hay crop had a value of more than $17 million last year, compared to slightly

STOCK BULLS

ALL AIR-COOLED DIESEL ENGINES ARE NOT CREATED EQUAL.

It's easier to call an engine 'heavy duty' than it is to build it that way. Superior performance and long life are the result of special alloy heads, integral lube coolers, oil-cooled pistons and the Deutz highly efficient axial flow cooling blowers. These features plus 100% direct air-cooling result in substantial fuel savings — 20 to 40% according to users — and far less pollutants. Deutz air cooled diesels — 5 to 500 bhp

DEUTZ®
AIR-COOLED DIESELS

- We stock rebuilt: starters, generators, injectors, for Deutz
- We have complete road service since 1955
- We supply free application engineering
- We have facilities for any mechanical fabrication required to apply new Deutz diesels

New cattle sale record set

(Continued from Page 1)

Lancaster Stockyards, Inc., there were actually over 2000 cattle sold, according to his Lancaster Stockyard official report.

"There were heavy receipts of cattle all over the country," he noted. "I think it was probably due to President Carter's comments concerning meat imports."

"Then the futures market reacted, and people just thought that they better unload their cattle," he continued. "I'd say a good one third of the cattle were what I call panic cattle. They wouldn't have been there if it wouldn't have been for that.

McCoy went on to say that he thought the cattle market for the next three to four weeks would be a gig question mark.

"But from around mid-July on, especially when we get in the third quarter, I'm pretty bullish," he remarked. "There is a record low number in the national cattle herd."

When asked to comment on the significance of the meat imports, McCoy stated that he thought such an action would have more of a psychological impact than anything else.

"The market should be in good shape," he observed, "and we need good markets. The cattle markets have been hurting."

Set-aside

(Continued from Page 1)

shows that 92 farmers signed up in Lancaster County. This figure is five per cent of the eligible farms. In Lebanon County 50 farmers signed up for eight per cent of those eligible; in Chester County, 239 signed for 26 per cent of those eligible; Berks, 251 for 19 per cent of those eligible; in Adams, 597 signed up for 53 per cent of those eligible; and in Dauphin, 242 farms for 30 per cent of those eligible.

Participation in the set-aside is voluntary. However, non-participants are not eligible for price support loans, disaster payments, or deficiency (target price) payments. While farmers need to sign up and comply with set-aside provisions to receive program benefits, they will not be held to the intentions they provide ASCS during the signup period. Final figure will be available after farmers have certified their acreage later in the year.

Sign up began March 1 and ran through May 31. However, those farms which county officers could not accommodate by May 31 were asked to sign a register and had until June 15 to complete enrollment.

Final sign up figures will be issued June 20.

Garden Spot's ag value

(Continued from Page 28)

in 1977 compares with 242,000 head counted in 1976 and 246,000 head in 1975.

Hay harvesters in the Garden Spot averaged 3.06 tons per acre last year, a good jump from the 2.77 figure recorded a year earlier. Potato yields, on the other hand, dropped from 284 hundredweights per acre in 1976 to 235 hundredweights last year. Acreage dropped from 1770 in 1976 to 1590 last year. The value of vegetables increased by over a million dollars. With 3530 acres in production, the 1977 value was $3,694,000. In 1976 the respective figures were 2655 acres and $2,560,000. Fruit production recorded a slight increase. No acreage figures are available, but the value of fruits produced in the Garden Spot last year was $1,077,000, which compares with $1,072,000 for 1976.

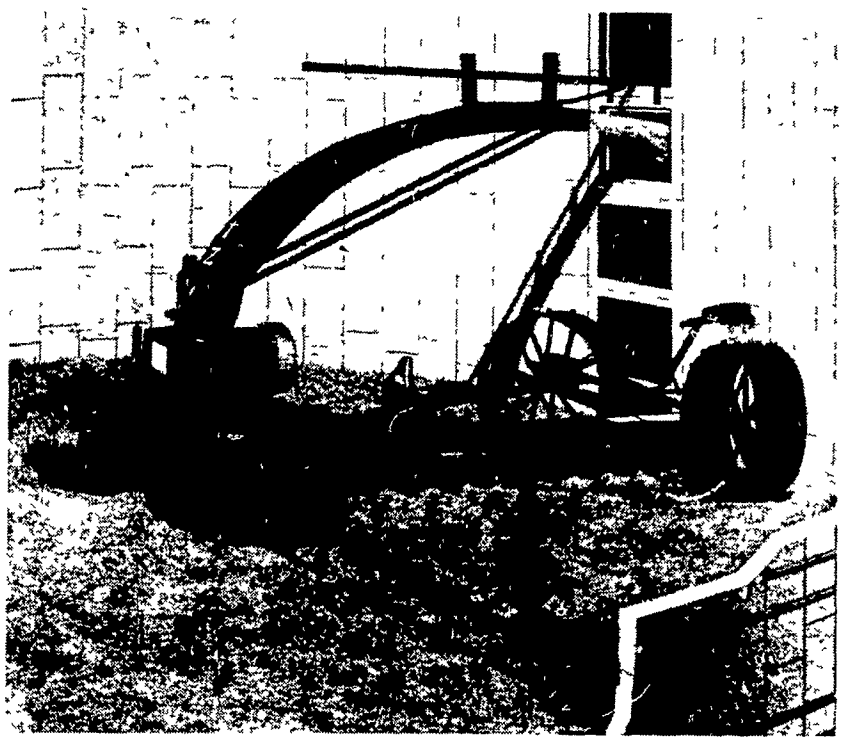
All of the small grain crops except oats have lost some ground during the past several years in both acres and dollar value. Wheat took the biggest licking as its value plummeted from more than $6 million in 1974 to $2,373,830 in 1977. Acreage for wheat, meanwhile, has dropped by nearly 7000 acres during the past two years, and by 4250 acres since a year ago. Average yields were 42 bushels per acre in 1974, compared to 35.7 and 35.4 in 1975 and 1976, respectively. For 1977 the average yield was 41 bushels.

The barely crop has gone downhill in average yields; (61 bushels per acre in 1974 to 56.2 in 1975 49.9 in 1976 and 58.0 in 1977) while planted acreage has dropped by 2200 acres since last year. The crop's value was pegged at $2,230,000 in 1974; $1,464,700 in 1975, $1,546,700 in 1976 and $1,426,800 a year ago.

Oats, with 3500 acres planted last year, and an average yield of 56 bushels per acre, was valued at $284,300. That compares with a value of $265,000 in 1975 and $258,000 in 1976. Planted acreage has increased by 500 since last year.

Lancaster County, which ranks as the number one non-irrigated agricultural county in the United States, has 5785 farms, according to the Crop and Livestock Report. That's the same number of farms as were counted in 1976.

SILO TO BUNK



THE CHOICE IS PATZ. Your PATZ dealer will offer you the right choice in a single piece of equipment or in an integrated feeding system. The system is anchored by the unique and innovative PATZ claw toothed Silo Unloader workhorse. Exclusive steel hardened gathering chain loosens silage other unloaders skim over. Thirty inch diameter twin drive wheels mean greater traction and Power Cutters remove silage build-up on walls.

In feeding equipment PATZ has the 166 Overhead Feeder, the Tapered Pan Feeder or the unique Circular Feeder. PATZ has three conveyor models plus two versatile Material Mover models. A choice of two economical Chain-type Bunk Feeders are also available.

Your PATZ Dealer can install and service a complete feeding system for you — check out his broad selection

Material-Only Packages Now Available on all Standard Wickes Buildings Plans

If you're handy with a few basic tools, you'll be surprised at how little it costs to have a genuine Wickes building on your land. Our 'do-it-yourself' material packages provide everything you need to build your own machinery storage building, dairy or beef set-up, horse barn, garage or utility building. Commercial buildings, too.

These are America's finest pre-engineered poleframe structures, with building components produced in our own plants to rigid Wickes standards. The complete package is genuine Wickes Buildings quality throughout, delivered to your job site with all necessary blueprints and construction details for fast, easy erection. Free professional planning assistance also available. Call today and ask for your 'do-it-yourself' price on the building of your choice

See the Man in the Red Car.

Berks County has 8 dairy princess contestants

By LAUREL SCHAEFFER
Staff Correspondent

READING – Berks County dairy farmers have eight girls competing in the county dairy princess pageant.

All contestants have attended make-up, hairdressing, public speaking, and modeling clinics. They also had the opportunity on June 8 to attend a nutrition seminar given by Sandra Tousani, nutritionist for the Dairy Council. On June 10 a brunch will be held by the Berks County Dairy Association for the contestants and their mothers at the International House, Berkshire Mall, Wyomissing.

During the week of June 12 the contestants will participate in various activities held at the Berkshire Mall which include a dairy products cooking contest on Monday evening, butter making on Tuesday evening, a fashion show on Wednesday evening, special music entertainment and dairy recipes on Thursday evening, and square dancing on Friday evening. A second fashion show will also be held June 15 on Penn Square, Reading.

The actual Berks County Dairy Princess Pageant will be held on Saturday, June 17, at the Sheraton Berkshire Inn, Wyomissing. Dinner will be served at 7:00 p.m. and the pageant will begin at 8:00 p.m.

The contestants are:

Mary Ann Weyer, daughter of Mr. and Mrs. Ronald Weyer, Hamburg R2. The Weyer's milk about 34 Holsteins but Mary Ann has several Jerseys that she cares for and shows. She is 18 and graduated from Hamburg High School in 1977 and is presently a bookkeeper.

Mary Ann participated in various clubs and activities while in school and is presently active in 4-H as a county representative. She enjoys farming very much and helps at home whenever her time permits.

Karen Sattazahn, 18, is the daughter of Mr. and Mrs. Clarence Sattazahn, Womelsdorf R1. She plans to attend Kutztown State College to study elementary education after graduation from Conrad Weiser High School.

Mary Ann Moyer, beauty consultant for Shiseido, conducts a make-up clinic for Berks County dairy princess contestants Eileen Rohrback (seated) and Teresa Wolfskill and Bonnie Davis.

Karen is a 4-H public affairs president and blue form winner. She is active in the Grange, Berks County Junior Holstein Club, and St. John's Church, a member of her high school band, Senior Chorus, drama club, year book staff, Junior Classical League, and National Honor Society. She enjoys traveling, meeting people, showing at fairs and collecting post cards. Karen's family has a herd of 108 Holsteins.

Teresa Wolfskill, 18 is the daughter of Mr. and Mrs. Mark Wolfskill, Robesonia R1. The Wolfskill's maintain a herd of 60 Holsteins.

Teresa plans to attend Lebanon Valley College after high school graduation to study chemistry. She is presently involved in senior chorus, glee club, choraleers, county chorus, student council, and National Honor Society. Teresa was also class historian and participates in her church choir, The English Handbell Choir and is assistant organist. She enjoys working with cows and playing the organ.

Eileen Rohrbach, 17, is the daughter of Mr. and Mrs. Alton Rohrbach, Shoemakersville. They have a herd of 67 Holsteins. Eileen plans to become a secretary and attend a business college after graduating. She is active in the Virginville 4-H Dairy Club, Fleetwood Grange and Junior Holstein Club. Eileen also plays clarinet in the band and belongs to the wilderness club, and Future Business Leaders of America, is a cheerleader and holds an Explorer Post Zion's U.C.C., Windsor Castle.

Her hobbies include swimming, hiking, skiing, sewing, and playing piano.

Marie Herbert, 21, is the daughter of Mrs. Elva Herbert and the late Paul Herbert, Kutztown R1. She is a graduate of Kutztown Area High School and is presently a herdsman for Green-Valli Holsteins.

Marie is a member of the Junior Holstein Club and Fleetwood Grange where she is youth treasurer. She is also a 4-H club leader. She participates in the senior choir and Sunday School at New Jerusalem U.C.C.

Her hobbies include showing dairy cattle and helping others at fairs, sewing, bowling, softball, and singing with the family.

Cindy Howard, 17, is the daughter of Mr. and Mrs. Leroy Howard, Oley R2. The Howards have a herd of 125 Holsteins. Cindy is a senior at Oley Valey High School and plans to work in a Post Office and possibly attend cosmetology school.

She is active in the Christ Lutheran Church, Spangsville, and participates in softball, bowling, and gymnastics. Her hobbies include stock car races, tennis and swimming.

Wendy Shaw, 17, is the daughter of Mr. and Mrs. James Shaw, Oley R2. Upon graduation, Wendy plans to attend a college for agriculture to study dairy science.

Presently Wendy is an active member in the Eastern Berks Dairy Club, 4-H sewing club, and is a 4-H teen leader. She is also an officer in the Oley Valley FFA, and belongs to the Junior Holstein Club. Wendy is a member of St. Gabriel Episcopal Church and participates in public speaking and the class play.

Her hobbies include showing cows, public speaking, reading, and dairy judging.

Bonnie Davis, 17, is the daughter of Mr. and Mrs. Donald Davis, Bernville R2. They maintain a herd of 52 Holsteins. Bonnie will be a senior at Tulpehocken High School next year and plans to work for her father upon graduation.

Presently Bonnie is active in the Tulpehocken FFA, is treasurer of Christ Little Tulpehocken Church Youth Group, and is a Sunday School teacher. Her hobbies are crocheting, knitting, and working with dairy cows.

Karen Sattazahn, Mary Ann Weyer, Wendy Shaw, and Cindy Howard are four of Berks County's eight dairy princess contestants.

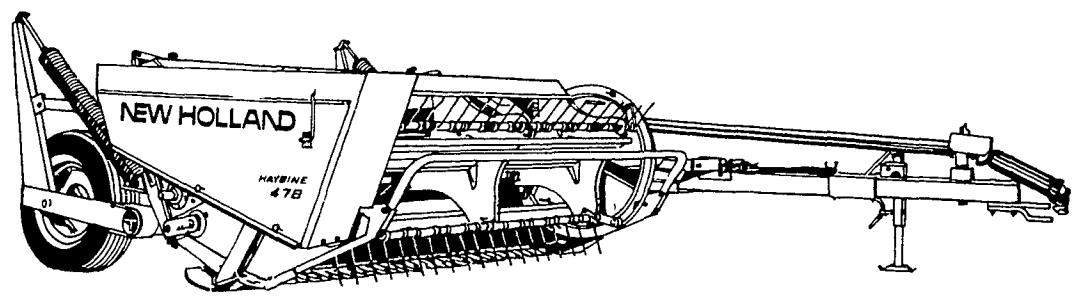
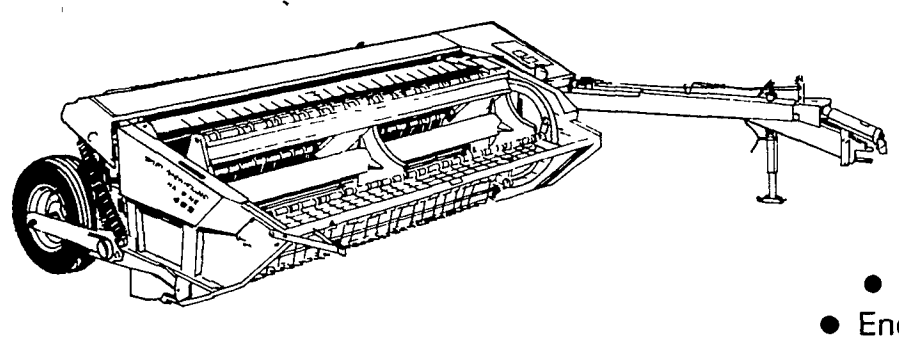
Only Sperry New Holland gives you a complete choice of mower-conditioners . . .

NEW Model 478 Haybine® Mower-Conditioner features:



- Seven-foot cut.
- Full-width chevron intermeshing rubber conditioning rolls.
- Equal angle PTO.
- Change from windrow to swath in seconds — without tools.

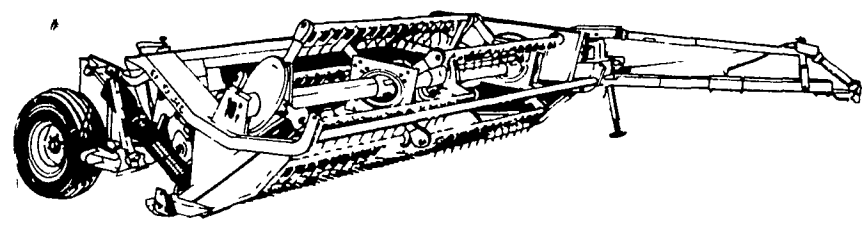
NEW Model 489 Haybine® —for those who want the very best:



This all new, king of the nine-footers features:

- Rolls mounted in the main frame — not in the header
- Chevron intermeshing rubber conditioning rolls.
- Gear driven conditioning rolls.
- Enclosed, balanced wobble drive.

Model 495 Haybine with unique Rolareel™ Header picks up down and tangled crops.



- Unique Rolareel™ header picks up down and tangled crop - feeds directly to rolls!
- 12-foot, 3-inch cut!
- Choice of swath or windrow - exclusive for a 12-footer!
- 9-foot, 2-inch chevron intermeshing rubber conditioning rolls - over 36 inches longer than any competitive 12-foot unit.
- Optional lateral transport capability lets the '495' go through any 10-foot opening.

Model 1495 Haybine offers you a Rolareel header and self-propelled convenience.

- Unique Rolareel™ header picks up down and tangled crop - feeds directly to rolls!
- 12-foot, 3-inch cut!
- The only 12-foot SP that lets you windrow or swath!
- 9-foot, 2-inch chevron intermeshing rubber conditioning rolls - over 36 inches longer than any competitive unit!
- Stable, four-wheel stance.
- Choice of gas or diesel.
- Planetary or hydrostatic drive.

Embryo transfers

(Continued from Page 27)

interests and he has been associated with them in all parts of the country. He regards embryo transfers as "quite a merchandising tool" and acknowledges that it is a method of reproduction which can have profound effects on the dairy industry.

Via Pax recently accomplished a successful embryo transfer using an embryo which had been frozen for 60 days. The perfection of this process will give great flexibility to applications of the technique in all parts of the world.

The firm has done embryo transfer work in primarily the Northeast and Upper Midwest, but could go to other parts of the country as well. When considerable traveling distance is involved, the company requires that several cows be assembled in one place. These cows are then synchronized for heat, bred, and flushed. It sounds simple. According to Hasler it is simple. But it takes patience and expertise. One minor mistake and an entire operation is lost. It gets tricky – as can be exemplified by the requirement of synchronizing heat periods between the donor and recipient animals.

The first successful embryo transfer occurred in 1890 when Walter Heape pioneered the technique with rabbits. But it hasn't been until this decade that serious efforts were made on a commercial scale.

For those who feel they have a cow worth the effort and expense, embryo transfers are a sure way of getting many more offspring than would be possible if Nature ran things entirely on her own. "It's the closest you can come to having a cow produce a litter," says Dr. James Evans at the New Bolton Veterinary Medical Center, Chester County. He and his associates have done embryo transfer work and research at New Bolton for the past 18 months. New Bolton is a wing of the University of Pennsylvania's School of Veterinary Medicine.

The idea of embryo transplants is to make use of more of a top cow's genetic material (eggs), as is already being done with bulls through the collection and artificial insemination of sperm. In short, embryo transfers are making it possible for top cows to have hundreds of daughters and sons.

Lanc. Co. gymkhana set

LANCASTER – A Lancaster County 4-H Horse Club Gymkhana will be held on Sunday, June 18, beginning at 9 a.m. at the Glicks Trailer Shop, Bareville. The show is open to all Lancaster County 4-H members and their project animals only.

Classes will be judged according to 4-H rules. Entry fee will be $1 per class with the proceeds going towards the awards banquet in December.

Animals may be shown under both English and western tack. There will be a bake sale and 4-H'ers are urged to bring baked goods to sell.

Classes in the gymkhana include: Grooming and showmanship, both junior and senior, dollar bareback; hunt seat equitation, both junior and senior; egg and spoon; English pleasure poney; English pleasure horse; walk-jog; walk-trot; working hunter horse; working hunter pony; scurry race–pony; scurry race–horse; western equitation, junior and senior; barrel race–pony; barrel race–horse; western pleasure–pony; western pleasure–horse; western riding; trail class–pony; trail class–horse; barnyard jumping; pole bending–pony; pole bending– horse; break and out; pair class, and county team.

If there are any questions, members can call Rose Fellenbaum at 717-569-3068 or Mary Ann Rohrer at 717-786-7604.

Conservation group meets

LANCASTER -- The Lancaster County Conservation District held its monthly meeting Wednesday at the Lancaster Farm and Home Center.

Plans were discussed concerning the Resources Conservation Act, which directs the USDA to make a total assessment or appraisal of America's basic natural resources and to help protect and improve them. Covered will be the nation's soil, water, and related resources.

The program calls for public input and a tentative meeting for groups in Lancaster County was scheduled. More information will be released later concerning the date and purpose of this meeting.

Other matters covered at the meeting included the land judging contest and the choosing of an outstanding cooperator for the year.

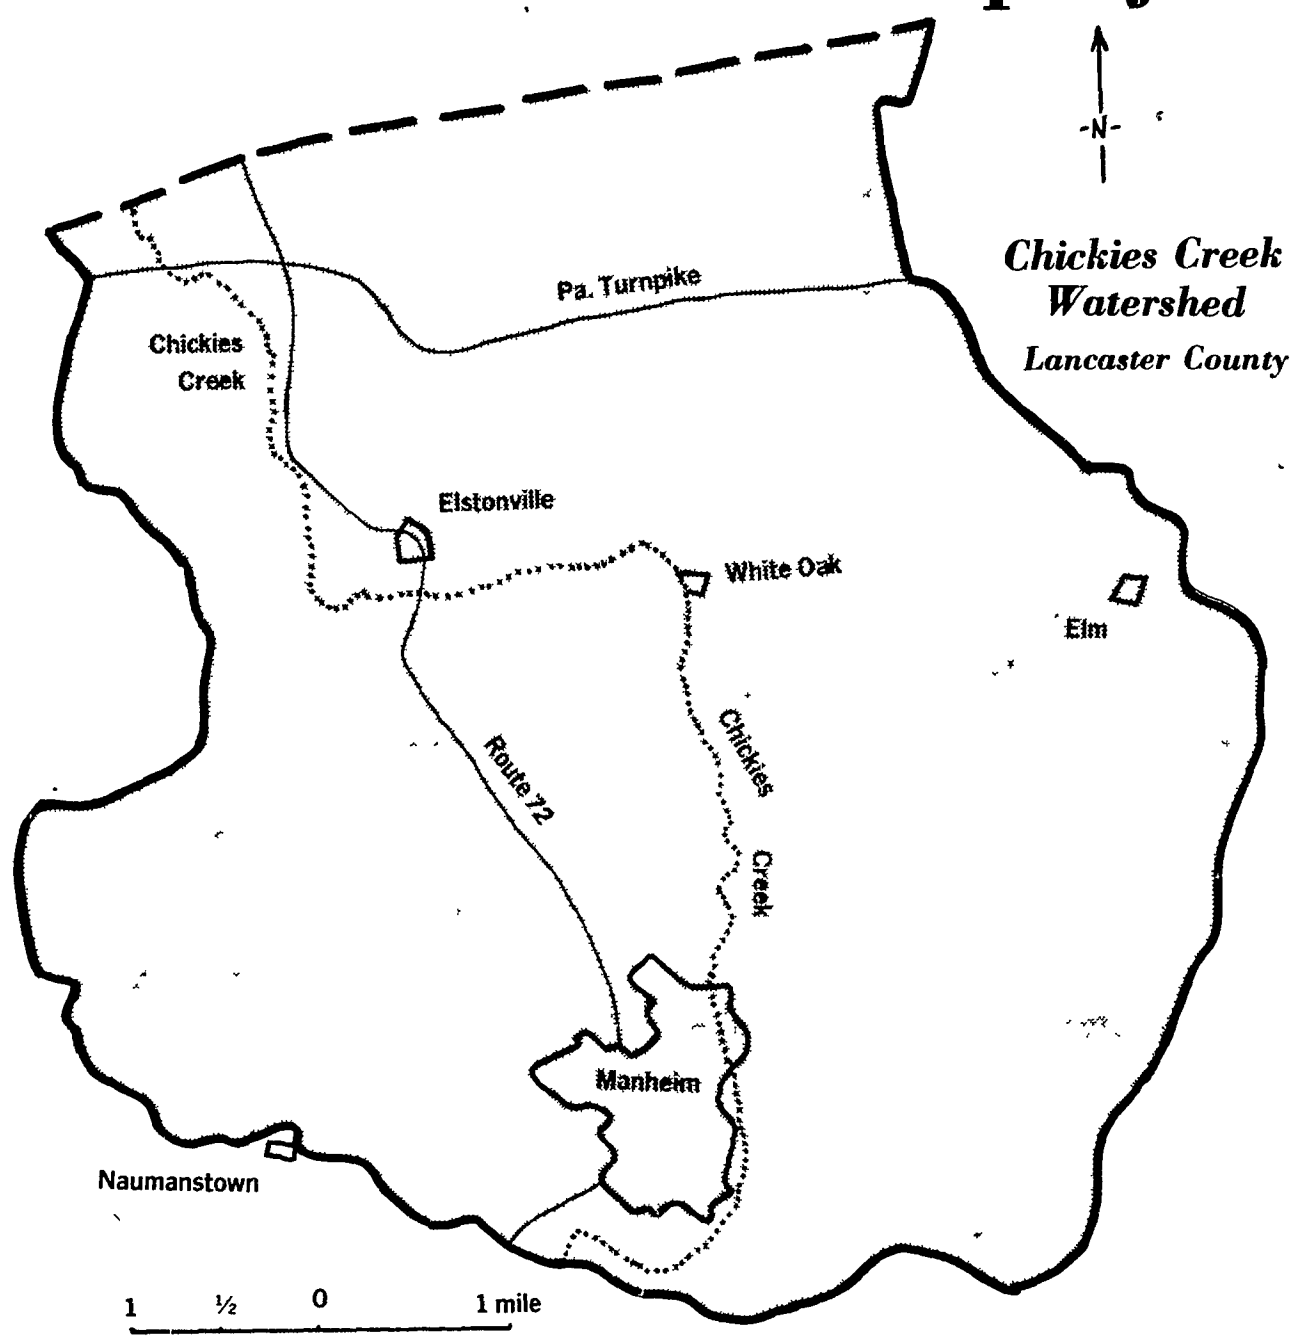
Land treatment focus of Chickies Creek project

By KENDACE BORRY

LANCASTER — "Land reatment of the farm land in he Chickies Creek water- hed is the first and basic tep to flooding problem. ny and all land treatment ill help. A heavier em- hasis on conservation ractices and programs ould aid in the anagement of the flood aters."

The speaker was Scott Eberly, soil conservationist in the Lancaster County Conservation District. He is actively involved in the Chickies Creek watershed project.

"Land treatment includes installing terrace systems, diversions, sub-surface drainage, grass waterways, and other erosion control structures," he related. "It is essential to farming, in fact all conservation practices are an important part of the farm industry."



The area within the boundries of the Chickies Creek watershed are shown on the map above.

The dotted line represents the creek whose travel can be traced from its start in Lebanon County. Farmers are urged to check and see if their farms are located within this area and find out if they qualify for land treatment cost sharing.

In order to aid with this land treatment, cost-sharing is offered by the ASCS office. Because of the high priority of the project, the rate offered by the government has been raised. In fact, 90 per cent of the cost of land treatment improvement practices in the Chickies Creek watershed will be paid by the government until the funds are exhausted.

At the start of the year, $12,000 was allocated for the

Land treatment

(Continued from Page 33)

project. At the present time, close to $4,000 in funds are still available to the area farmers. Anyone interested in the details of the project should contact the Lancaster ASCS Office, located at the Lancaster County Farm and Home Center, Lancaster.

There are approximately 23,500 acres of land used for cropland in the watershed. This makes up around 46 per cent of the total land involved in the area.

Estimates of erosion from the land that is being cropped average 11.2 tons per acre per year. The maxiumum allowed soil loss on cropped field is four tons per acre per year, for good conservation.

Surveys of the cropland in the Chickies Creek area have shown that the crop yields have stayed basically the same over the last five years. It is believed that the installation of conservation practices will reduce the soil loss through erosion, conserve water, and increase yields.

According to Eberly, around 2,700 acres of cropland are presently adequately protected, but there are 8,113 acres which are considered not "adequately protected" in the watershed. It is the 8,000 plus acres that need the land treatment to help in the Chickies Creek problem.

As was reported earlier in **Lancaster Farming**, the Chickies Creek Watershed creates a problem in the Manheim area of Lancaster County. Developing a flood plain and reducing the sediment capacity of the stream are part of the plan. The effects of the floodwater and its damage are to be considered, along with the evaluation of fish and wildlife resources and the management of them. Appraised will also be the water supply of the creek and its potential for future needs.

People interested in learning more about the Chickies Creek project can obtain information from the information center now located at the Manheim Chamber of Commerce, 32 N. Main Street, Manheim.

Farmers located in the northern end of the Chickies Creek watershed would benefit from the land treatment as well as those from the area near Manheim.

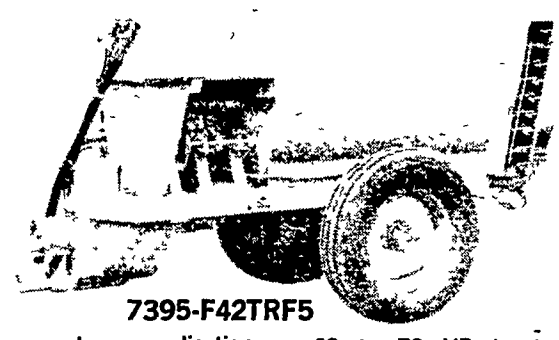
"Land treatment just makes good sense," Eberly observed. "And this program might fold up without public interest. Without local support, it could fall apart. But now, the money is available."

As part of the Chickies Creek project, two township meetings, one in Penn and one in Rapho, will be held in July or early August. There conservation practices will be discussed, and representatives from the SCS, ASCS, and the Lancaster County Conservation District will be available for questioning and discussion.

Sponsors of the Chickies Creek project include the Lancaster County Commissioners, the Lancaster County Conservation District, and the Manheim Borough.

Built to Handle the Big Crop

- Covers approximately 300 acres per day with 80 ft. total swath.
- Remote Controls include long hose harness for mounting next to operator.
- Control panel includes instant shut-off valves and vane controls to direct the spray swath.
- PTO Drive - Low Cost Operation.



7395-F42TRF5

- Low volume application from 20 to 50 GPA eliminates continuous fill ups.
- 60 to 70 HP tractors recommended.

Egg conference

(Continued from Page 1)

acquaint you with the goals and accomplishments of NEMA and UEP Your input will be welcome and we hope that you will draw long-term directions from the meeting."

"UEP," he continued, "speaks for egg producers with a special authority. It is the only national organization whose interest is concerned solely with the economic well-being of the egg industry."

A greeting to the guests by Don Horn, vice president of Pennfield Corporation, will open the meeting. That will be followed by an update on NEMA activities from Bill Rent and Charles O'Reilly.

Ms. Christine Bushway, coordinator of promotions for the American Egg Board in the Northeast, will detail the phases of the AEB's efforts to move more eggs to consumers.

Highlight of the meeting will be a talk by Greg Murch, director of marketing for UEP and architect of the UEP's egg export program. He will discuss Washington's political scene, touching on those subjects in particular which are pertinent to the egg industry. In addition, he will relate UEP's plans on how to offer a comprehensive cooperative program for farm insurance to members.

Summarizing the session, Al Wenger of Dutchland Farms will outline the role that NEMA, the other regionals, and UEP can play in making egg production a strong, well-knit segment of American agriculture.

Anyone who owns a laying flock and has not received an invitation to the June 20 meeting is asked to mail a card requesting further information. Correspondence should be addressed to NEMA, Box MM, Durham, N.H. 03824; or NEMA, 136 Harron Avenue, Hightstown, N.J. 08520.

Pa. has most hog packers

HARRISBURG – In 1977 there were 258 federally inspected plants which killed hogs in Pennsylvania. This was the largest number of hog packers listed by any state. The second highest number was 113 reported by Missouri. Iowa listed only 25 plants but 18.6 million hogs were slaughtered giving an average of 740,000 hogs slaughtered per plant in Iowa in 1977.

A further breakdown by size in Pennsylvania reveals some interesting information. There were 213 plants in the Commonwealth which slaughtered less than 1,000 hogs during the year. Thus, 82 per cent of the plants in the state accounted for less than two per cent of the total hog slaughter. There were 34 plants which slaughtered between 1,000 and 9,999 head, while 7 plants processed 10,000 to 99,999 head. All but four of the state's plants fall in these groups, but these 254 plants account for only 15 per cent of the state's slaughter. The four largest slaughter plants in Pennsylvania slaughtered 2.4 million hogs in 1977 – a shopping 85 per cent of the state total.

THE STRAWS THAT ARE BREAKING MILK PRODUCTION BARRIERS.

No doubt about it You've made great strides in building your herd's production Even if average, your herd's milk production has probably doubled in the last two decades And you're looking for more

We're ready to take you much further, and faster Curtiss stands ready now with the Holstein sire power to help you break your genetic barriers with every crop of replacements To help you reach greater milk and butter fat levels, and send you to the bank with more profit

How? Just look at the sire summary data of these five Curtiss sires Here's the kind of PD Milk, PD Butterfat, and PD $ that can put most any herd into a totally new profit picture

Sure you've seen high production figures on sires from other sources But you'll note that Curtiss sires offer something more *total performance* Not only high milk and butterfat production but also style dairy character udder strength and balance, and other traits that contribute to higher production and reproductive efficiency These too add up to more dairy income

So go ahead Shoot for higher milk production Do it with Curtiss sires and watch your herd take on the advanced look of high production *and* superior type

CURTISS
CURTISS IS AN AUTHORIZED DISTRIBUTOR OF LINDE CRYOGENIC REFRIGERATORS

Lined up in the center of the ring, the riders pause to practice their exercises as directed by their instructor, Mrs. Carol Henkel.

Riding lessons used as a therapeutic tool

By KENDACE BORRY

QUARRYVILLE – When you first see them in the riding ring, concentrating on their form, they look like any other group of youths learning to ride. Their instructor stands in the center, telling them how to sit up straight, put their heels down, and look straight ahead.

But on second glance, a person will notice that these riders are concentrating harder, and are very intend on what they are doing. The young equestrians are learning to ride through a project of the Easter Seals Society.

Now that Spring is here, each week the Easter Seals Society sends out interested youth to the Hidden Acres Farm, owned by Mr. and Mrs. George Hassler III. Located near Quarryville, the horse farm offers its horses and facilities for use by the group.

But many helpers are needed for the project for the riders need assistance as they learn to mount, ride, and guide their horses. And parents couldn't fill this role, for many of them know no more of how to handle a horse than their youngsters.

So the Rough Riders 4-H Club, headed by leader Mrs. Mimi Rohrer, has taken on the job of being assistants for the riding class. Mrs. Carol Henkel acts as riding instructor. The riders are taught the equestrian skills, using English hunt seat tack.

"This isn't recreation, it's therapy," explained Mrs. Mary Jane Ferro, assistant instructor and coordinator of the Easter Seals theraputic horsemanship program. "The riders are here to improve their coordination and motor skills. These handicapped children are learning to use muscles and move different parts of the

Gypsy moths

(Continued from Page 18)

Pennsylvania Department of Environmental Resources, a long term control must eventually come about through biological control efforts such as the importation of natural predators for these moths. (Since they were originally foreign to the environment, their natural enemies must be imported from Europe and other parts of the world.)

Although this process is working, the government also does aerial spraying of insecticides in high-use, forested, residential, and recreational areas as a type of nuisance control.

"We do not do massive aerial spraying," notes Bill Slippey. "We keep the spray blocs as small as possible with a very narrow buffer. That way there is some migration activity, and should a virus take place, the migrating caterpillars would spread the spores. When a general collapse occurs, it goes into the spray blocs."

There are several other reasons behind using very small spray blocs. Very dense populations of gypsy moths are susceptible during the fifth and sixth instars (an instar is the time between larval molts) to a virus, to a bacteria, and to starvation. Therefore, they have a natural population check.

Critics of the spraying program have said that large scale spraying prevents the natural control from operating since it has the effect of thinning out the population to a level at which it is less vulnerable to infectious epidemic diseases.

Another reason for using only small spray blocs is one of economics. Spraying is just too costly. The contract costs of spraying this year are $7.09 per acre. A total of 137,000 acres was scheduled for treatment with a price tag of $972,000.

The Bureau does not begin to approach the spraying as eradication because of the above reasons and several others. First of all, says Slippey, to eradicate the gypsy moth in Pennsylvania, all the infested areas around the state would have to be treated. That amounts to approximately one half the Commonwealth. Also, the building dynamics of the gypsy moth are such that if no caterpillars are destroyed, the insect will multiply 200 fold. (One female lays approximately 400 eggs in a sac with a sex ratio of 50/50.) Therefore, in order to keep the population steady, 97 per cent must be killed each year. Anything less than that and the population will increase.

To add to the problem, the gypsy moth has a delayed, or staggered, hatch. Therefore, spraying would have to be repeated several times to be sure all the gypsy moths were killed.

At this point, natural predators, or parasites of the gypsy moth have a cumulative effect of killing 80 per cent of the insect population each year. High residential, recreational, and high-use forests are also sprayed.

The insecticide used is Dylox, which has been found to be the safest type of spray which can be used to combat these insects. This material causes no adverse effects to humans, pets, property, fish, game, and to most desirable insects such as many aquatic organisms and honey bees It is, however, on the Russell Train list of 100 questionable products with a danger cited as cancer causing.

Spraying, which is just being completed in the Commonwealth this week, is tricky. The insecticide is sprayed onto the trees, so that when the caterpillars eat the leaves, they injest the material which is poisonous to them.

The timing of the spraying program is critical, because the foresters must wait for a complete hatch and enough leaf surface to be effective. If they wait too long, they need more chemicals with less leaf surface. As a result, they have only seven to 10 days, approximately, to apply the insecticide in order to do a good job.

In the past, 90 per cent of the spraying has taken place in new areas each year.

"We don't spray the second year unless it is absolutely necessary," says Slippey.

This year the spraying began in Cumberland and Perry Counties and then moved to Chester, Lebanon, and Lancaster. When completed, the pattern will include 24 counties where the gypsy is a serious problem.

Five contractors were involved in the work: Evergreen Helicopters, Inc., from Oregon; Island Helicopters Inc., New York; Helicopter Applicators, Inc., Maryland; AgRoters Inc., Gettysburg; and Ed and Dick's Air Service, Inc., Bloomsburg.

According to Slippey, the outlook for control of the gypsy moth is hopeful, but he added, "We are going to be involved in spraying each year for several more years."

"The amount of spending is determined by the state legislature," he points out. "Many years we could have used more, but it really depends on how much the people demand funds for the program."

"We're never going to be rid of the gypsy moth," he continued. "Just how long it will take until they become naturalized is a good question. I hope some day we reach that point."

Until then, precautions can be taken by all individuals to help prevent the spread of gypsy moths.

Since the female gypsy moth is flightless, she crawls into upright objects to lay her eggs in July and early August. While the trunks of trees are the usual egg laying sites, camping trailers, house trailers, cars, nursery stock, packing crates, and other movable objects serve, as well. Thus,

4-H club lists plans

LEESPORT – Members of the Berks County 4-H Public Affairs Leadership Program will have their last official session on Saturday, June 10 at the Berks County Agricultural Center.

The group will also help as counselors for a 4-H Public Affairs Leadership Camp for young teens. The camp will be on Wednesday through Friday, June 21, 22, and 23 and is open to any Berks County teenager 13 to 15 years old. The camp will be at Camp Manatawny, south of Yellow House, and cost $15. If interested, contact Ms. Barbara Stratton, Berks County 4-H Office, Berks County Agricultural Center, Leesport, Pa. 19533. Phone 215-378-1327.

Strawberry roundup set

LANCASTER -- The Lancaster County 4-H Strawberry Round-up will be held Wednesday, June 14, in the auditorium of the Lancaster Farm and Home Center. As in previous years, it is sponsored by the Lancaster Rotary Club.

All club members are to bring their strawberries to the Farm and Home Center by 10:00 a.m. Berries will be judged and record books scored by noon, after which the Rotary Club will treat the 4-H'ers for lunch. Immediately following will be the sale of strawberries to the Rotarians.

Each club member is asked to bring two quarts of hand-selected strawberries for judging purposes - plus eight to 10 quarts of additional berries to be sold. "Bring more if you have them because we will need all the berries that you have for the Rotarians to buy," says Extension agent Arnold Lueck.

"In addition, bring along your completed 4-H Strawberry Record Book. Cash awards will be given for the best exhibits of strawberries, as well as for the best total project score," Lueck explained.

Oranges Retain

The vitamin C in fresh oranges is very stable and little — if any — is lost when an orange is cut and stored overnight in a plastic bag in the refrigerator

Gypsy moths

(Continued from Page 37)

the egg masses of the less mobile female can be transported from their original site.

Because of this, families moving household goods from eastern states to other parts of the country should be especially careful, officials say, to check vehicles and belongings likely to harbor the egg masses – hairy, buff colored mounds the size of a half-dollar.

Anyone finding an egg mass in an area already infested with gypsy moths should remove and destroy it. Anyone outside those areas who finds an egg mass is asked to report it to a federal or state plant protection and quarantine office, generally found in the telephone book in federal or state listings under "Agriculture."

Homeowners in light-to-moderately infested areas should act now to help protect their trees and ornamental shrubs from gypsy moth caterpillars, according to USDA officials. Measures include:

——Putting a wide band of a sticky substance called tanglefoot around tree trunks to trap the caterpillars.

——Tying burlap or cloth strips around tree trunks. Caterpillars cluster under the strips and can be easily destroyed.

When an area becomes heavily infested, however, individual homeowners can do little to protect their trees, since gypsy moths will readily spread into their yards from infested neighboring properties. The best defense in such areas is community-wide action. Community leaders interested in gypsy moth control projects should contact their local county agricultural agent or state department of agriculture.

REPLACE YOUR ROOF NOW!

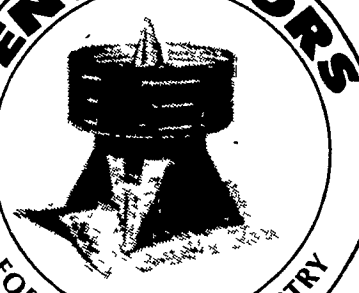
OBERHOLTZER'S CUSTOM MADE VENTILATORS FOR FARM AND INDUSTRY



18", 24", and 30" Vents

- Provides Adequate Ventilation for Curing and Drying Crops.
- Prevents Moisture and Heat Damage in Crop or Material Storage.
- Prevention of Spoilage or Damage Can Pay for Costs of Units in a Short Time.
- Used for Industrial Ventilation of Excess Heat—Fumes — Dust.
- Gravity Ventilation is very satisfactory, however, a fan can be mounted in base if forced ventilation is desired.
- By Exhausting Air Through Roof Vents, Entire Window Areas become Fresh Air Intakes.
- Roof Vents Eliminate Moisture which ordinarily Filters Out Through Walls, Causing Warping — Rotting — Paint Peeling.
- If these Units are Installed on the Ridge, and Windows are Opened to the Leeward Side of the Building, a Good Winter Ventilation is obtained, Eliminating Cross Drafts.
- These Gravity Units Provide a Gentle, Steady Air Movement Continually without a Forced Draft. Especially advantageous where Animals are Housed.

Onduline® CORRUGATED ASPHALT SHEETING
GUARANTEED 25 YEARS

USE THE ASPHALT ROOFING/SIDING THAT:

- Insulates like cork.
- Installs easily on 2 foot centers.
- Will not rust.
- Will not corrode from fertilizers or chemicals
- Offers a choice of built-in colors.
- Requires no special tools
- Is lightweight and flexible

Riding lessons used as a therapeutic tool

(Continued from Page 36)

that they didn't know could use."

ch week a progress rt is done by workers for Easter Seal Society who h and check to see how child is doing. Im- ements in extension, control, balance, and cle improvement are all d.

e program has been g on for several years although this is the nd year that the 4-H has involved. And its lts are evident.

e example would be Boettner, Lancaster. tated that six years ago started to come to the g classes as a student. ng her interest in the es, Mrs. Jill Hassler told she could come out to the every day. Now, years , she is learning to be a stable manager and at the moment is an apprentice at Hidden Acres. And she still loves horses.

Mrs. Ferro is hopeful that the program will expand in the future. She and executive director of the Easter Seals, Jack Sipple, plan to visit other facilities where riding is used as a therapeutic tool.

"We need to work this into a full time day program, but to do that we need monetary backing and more interest," she related. "At the moment, we are only doing and more interest," she related. "At the moment, we are only doing it on a one evening a week basis."

At the present time usually 12 riders are involved.

For those who are interested in becoming involved in the program or would like to learn more information about it, they can contact Mrs. Ferro, either calling her at 717-284-4850, or writing to her at her home at Holtwood R2, Pa. 17532, or contacting her at the Lancaster Easter Seals office.

Meanwhile every Tuesday night, weather permitting, the horses and hopeful riders gather at Hidden Acres Farm for another session of riding and exercising as all learn to improve their skills.

4-H club meets

SPRING GROVE – The Central 4-H Dairy Club of York County will meet here on June 12 at 7:30 p.m. at the Donald Eyster farm, Roth's Church Road.

For further information, please call Tom Welsh, East Berlin, 717-259-9685.

Three Rough Rider 4-H'ers plus one pony and one eager rider add up to a great combination for the riding class.

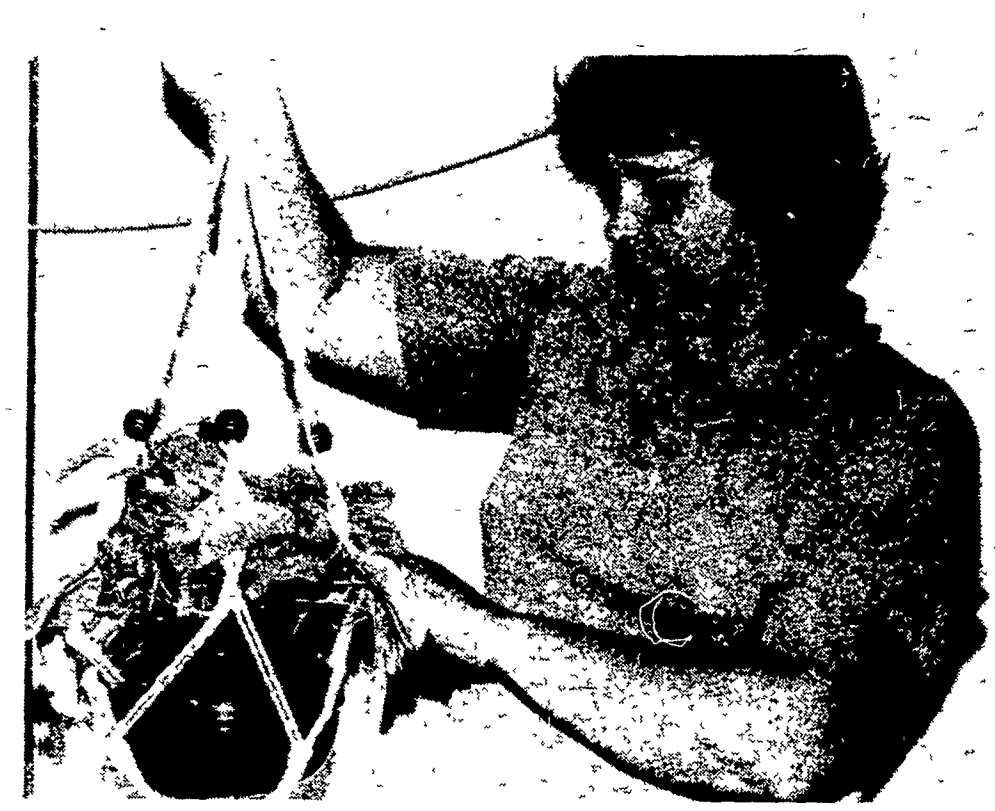
HOMESTEAD NOTES

Fay looks over her planter of flowers.



Fay Herr checks a prayer plant in a hanger before placing it in the hook on the front porch for the Summer. She and her daughter make macrame hangers, and she enjoys houseplants.

Fay Herr fills many roles at Herr-Hope farm

One of the jobs Mrs. Herr fills is that of writing down cow identifications and times she notices dairy animal in heat. With these records t herdsmen follow up with insemination.

By SUSAN KAUFFMAN
Staff Correspondent

KIRKWOOD – Many companies and industries have undisclosed business connections which are known as silent partners. Their input is substantial, but their involvement is not dramatically projected for public attention.

Probably the most frequent use of a silent partner is the family farm. For generations, farmers have had a strong help-mate, hired-hand, advisor, bookkeeper, and companion in the forms of their wives. Fulfilling a number of roles simultaneously, effectively and without fanfare is the task and life's work of many farmers' wives. One example of the farmer's wife who does whatever needs to be done is Mrs. A. Dale Herr.

First in the job description Fay Herr fulfills is mother to Tammy and Dale, Jr. Tammy is 12 years old and will be entering seventh grade at Swift Middle School in the Solanco School District next Fall. Dale, Jr. is eight years old and will be a third grader at Bart-Colerain Elementary School. Being a mother means trips to pee-wee baseball games, overseeing swimming pool guests this Summer and learning crafts along with her daughter Tammy.

Last November Tammy was selected Citizen of the Month for the Swift Middle School and was given the opportunity to enter a special crafts class in macrame. She, in turn, taught her mother how to tie the twine and yarn to create decorative as well as useful plant hangers. The newly learned craft was a natural skill for Fay who is well acquainted with crocheting afghans and a very useful craft which she uses to accent the many plants she enjoys growing. One particularly striking hanging plant among the many Fay has hung on her long front porch for the Summer months if a florishing prayer plant. It is housed in a shining black ceramic pot hung by a white twine macrame hanger with wooden beads worked into the tying pattern.

Although she says prayer plants are very easy to start as are several other varieties of houseplants she cares for, Fay's favorite is the more difficult fern. In the two west windows in her kitchen, Fay says she starts her plants best with a mixture of peat moss and garden soil and plenty of attention to watering.

In the Summer, when things are too busy for much pampering of houseplants, Fay hangs a lot of them on the front porch and also plants several dozen petunias and begonias in assorted containers which rest in front of the large stone home. One special time-saving technique Fay uses with the outdoor flowers is to place a layer of peat moss on top of the planter soil to retain the moisture and subdue weed growth.

While being a mother and a tender of delicate plants, Fay is also a caretaker of the extensive lawn which spreads itself around the buildings, silos, lanes, flower beds and up and down sloping banks at Herr-Hope Farm. Fay explains that it takes a full day to get all the lawn mowed even with the use of a riding mower.

With the addition of a totally new milking and housing set-up last Fall, the lawn has also expanded. Mrs. Herr explained that the farm they live on has been owned by the Herr family for around 50 years. Abram R. and Anna F. Herr, Dale's parents, owned it for 43 years. In addition to the home farm situated at the intersection of old route 472 (now Bartville Road) and pumping Station Road in southern Lancaster County near Quarryville, the Herrs own two other farms nearby. The total acreage is 496 acres and the crops grown on this land include 200 acres of corn, 120 acres of hay for haylage, 24 acres of wheat, 15 acres of barley and 26 acres of tobacco – 15 acres of which are raised on the halves with Amish neighbors.

Although Fay does not feel very confident with the

planting and raising gets into full swing. She explained that the plants are pulled in the morning then placed into the soil by hand with a tobacco planter. The planter is tractor-pulled. Two people sit behind it and when they hear a "click" it means they must drop the plant into the hole made by the planter before the water is added to the hole. A shoe pulls the dirt around the newly positioned plant. The Herrs use a two-row planter and Fay is often one of the two people handling the plants.

With rows 40 inches apart and plants spaced three feet apart, it takes several days to plant all the 26 acres even with the Amish planting their own.

After the plants have started to grow, the fields must be cultivated and hoed between plants. Once again Fay mans the hand cultivators which she pulls together then pushes apart in and out down the rows of tobacco plants.

In addition to the hand work of planting and cultivating, there is the chore of topping the tobacco plants or breaking off the flower stalk by hand. Fay says this step makes black hands. Usually by the middle of August, the strenuous task of cutting, spearing and hanging the tobacco plants in the tobacco curing sheds begins. Although Fay generally does not help with this more muscular work she pitches in when stripping the tobacco in the Winter before it is baled and finally sold in Lancaster.

At one time the Herrs used to raise their own tobacco plants but now they buy them and Mrs. Herr salvaged the old tobacco bed soil, rich with peat moss, to mulch her flowers.

The tobacco and yard work keep Fay busy during the Summer, but two jobs she also does all year long are helping with the milking and keeping all the records of the diversified farm operation which includes payrolls for several fulltime employees.

Dale expanded the Holstein herd last Fall from 90 to 180

milking cows. With the addition of a 150-stall free-sta barn and a herringbone double-six parlor, the operatio now handles 173 cows with 150 milking this week. The her is on DHIA and Fay helps during the two milkings wh testing is being done each month and also milks ev other weekend and when their herdsmen, Galen Mar and Robert Smith, have days off or vacations.

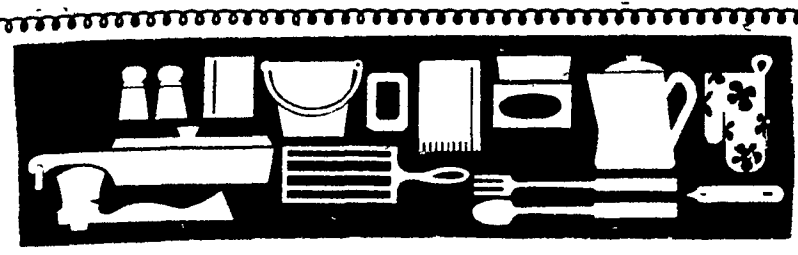
The Herrs raise their replacements and have als purchased bred heifers and milking cows recently t complete their herd expansion. Galen Martin inseminate the cows, and it is everybody's job to spot and write do cows in heat.

Fay helps with the milking and tobacco, but the recor keeping is all her territory. She spends considerable tim sending out the checks, recording expenses and income making out the payrolls for four fulltime men and keepin records for Farm Management Business Analysis Se vice. She has to have the books in order and complete quarterly for that service. And she is quick to give cred to that service for the computation of income taxes eac year.

"They do it better than I ever could. In this day it is har to imagine someone would try to figure his own incom tax by himself," she added.

Dale Herr is presently involved in a number of activiti such as serving as vice-president for Colerain Township Planning Commission, director for Octorara Watershe Association and Lancaster County Pennsylvania Farmer Association, vice-president and delegate for District 1 Quarryville Local for Inter-state Milk Producers an president of a Sunday evening bowling league.

Fay Herr, like many other farmer's wives, is the quiet partner who prefers the challenges of the family and th farm to speaking out in public. She, like other silen partners, finds plenty to do on the farm and goes about he many jobs as they come from week to week, season



Junior Cooking Edition

More dairy recipes are featured in the Junior Column this week as we continue through the dairy month. For those of you who like to cook, you can make caramels, dairy queen, homemade grape nuts, ice cream, strawberry pie, and white cake.

Now that Summer is fast approaching and schools are ending, you should have more time to try recipes and be busy in the kitchen. Send your favorite recipe to **Lancaster Farming**, Junior Cooking Edition, Box 366, Lititz, Pa. 17543. Please include your name, address, phone number, and age. Don't forget your list of ingredients and complete directions to your recipe.

CARAMELS

1 cup granulated sugar
½ cup brown sugar
½ cup light corn syrup
½ cup cream
1 cup milk
¼ cup shortening
2 teaspoons vanilla

Mix ingredients together, excepting vanilla. Cook over low heat to 246°F., stirring constantly. Add vanilla and pour into an eight inch square greased cake pan. Let cool.

xxx

DAIRY QUEEN

2 envelopes unflavored gelatin
½ cup cold water
4 cups whole milk
2 cups granulated sugar
2 teaspoons vanilla
1 teaspoon salt
3 cups cream

Soak gelatin in cold water. Heat milk until hot but not boiling. Remove from heat. Add sugar, vanilla, and salt to mixture. Let cool, then add 3 cups of cream. Stir until well mixed. Put in freezer to chill for five or six hours before freezing. Makes one gallon. Ingredients may be varied to suit individual tastes.

Lydia Hostetler
Age 13
Turbotsville, Pa.

xxx

HOMEMADE GRAPE NUTS

8 cups whole wheat flour
1½ cups brown sugar
4 cups buttermilk
2 teaspoons salt
1 teaspoon baking soda

Mix ingredients together. Pour into a 9 x 13 inch cake pan. Bake at 300°F. for approximately one hour. When cool, grind over a medium grate and then put into a shallow pan and toast until crisp. This should be kept in a tight container. Good to eat with milk.

Mary Anna Weaver
Age 12
Mifflinburg, Pa.

xxx

ICE CREAM

5 eggs, beaten well
2 cups granulated sugar
2 tablespoons vanilla
1 quart cream
18 large marshmallows
½ gallon milk
½ teaspoon salt
6 junket tablets in ¼ cup water

Heat the quart of cream and marshmallows together until the marshmallows are melted. Do not boil. Remove from heat. Then add the eggs and sugar. Next add the milk and salt. Put six junket tablets in ¼ cup lukewarm water. Add to the mixture after the ice cream is poured into the can. Let the mixture set for about 20 minutes before it freezes. Make in ice cream freezer. Note: two boxes of junket mix or instant pudding may be used instead of the junket tablets.

Simon S. Troyer
Age 13
Wyoming, Del.

xxx

DELUXE STRAWBERRY PIE

4 cups fresh strawberries
3 tablespoons corn starch
1 cup granulated sugar
3 drops red food coloring
1 baked 9 inch pie shell

Wash and cap strawberries. Then spread two cups of berries over the bottom of the pie shell. Mash or break remaining berries in a pan. Add sugar, cornstarch, and baking powder, mixing well. Place over low heat. Bring to a boil, stirring constantly. Reduce heat and cook for ten minutes. Add food coloring to deepen red mixture. Cool, then pour over raw berries in pie shell. Refrigerate until thoroughly chilled. Top with whipped cream.

Sandra Horst
Selinsgrove, Pa.

xxx

DELICIOUS WHITE CAKE

2 cups granulated sugar
½ cup shortening
1 cup milk
3 cups flour
3 teaspoons baking powder
1 teaspoon vanilla
6 egg whites

Cream shortening and sugar. Add milk and flour alternately, then add vanilla. Put in the stiffly beaten egg whites last. Nuts may be added if wanted. Place in cake pan and bake at 350°F., for 35 minutes or until done.

Anna Esch
Age 10
New Providence, Pa.

xxx

VANILLA ICE CREAM

6 eggs
2 cups granulated sugar
3 cans evaporated milk
¼ teaspoon salt
¼ cup vanilla
4 cups whole milk

Beat eggs in a three quart bowl. Add sugar gradually, then add other ingredients. Mix well. Place in ice cream freezer and freeze. Makes one gallon of ice cream.

Alfalfa award presented

LANCASTER -- Paul Sauder and Son recently received a placque from the Nachurs Plant Food Company for his past accomplishments in alfalfa growing. Sauder took first place in the Lancaster-County alfalfa contest, with a yield of 7.2 tons per acre in four cutting.

Roy Shertzer, reg. manager for Nachurs Plant Food Co. presented the placque for following the company's program and using soil tests.

On being a farm wife

—*And other hazards*

By
JOYCE BUPP

Hello there!

My name's Daisy. I'm a duck, I live at the farm of what's-her-name, who usually writes this piece of foolishness.

She's had a tiring week and appears to be falling apart. First her kitchen clock spun its gears out; then the stove died. And, her kids trucked on home from a farm display with two dozen baby chicks and a pair of guinea pigs in an unplanned pet expansion.

Fact is, the last time I saw her, she was galloping toward the barn, way behind schedule. She was muttering, "If this column doesn't get written, they'll cook my goose."

She really shouldn't worry – no one could cook anything on that dead stove. But I thought I'd help her out of her predicament, so I hurried in to the typewriter. Naturally, I type by the "hunt and peck" method.

Goodness knows, though, I really don't have time to do this sort of thing. I'm a mother now, you know.

Confidentially, I thought the blessed event would never happen. For two Summers, I patiently sat on nests of eggs that just laid there and refused to respond.

Then I discovered, in a government brochure from the Consumer Bureau, that it helped if you had a father duck around.

Just in the nick of time, two big, strong, handsome drakes arrived here to live in the barn. It was love at first sight. Following a brief Springtime romance, we were wed.

Finally, a day came at last when the eggs I had tenderly nurtured for three weeks began to make strange sounds and movements. It was an easy home delivery with no complications; and my happiness was unbounded as I proudly showed off my adorable eleven fuzzy yellow babies.

But mother never warned me what a job it is to raise a family!

All those hungry beaks to feed!

It's "Mom, I'm hungry!" all day long. Have you ever tried to find enough bugs and worms to satisfy eleven insatiable appetites?

And then I have to put up with this constant hassle about eating junk foods – paper, sawdust, bits of aluminum foil, even a piece of marshmallow that those human kids tried to feed them during a picnic the other day.

Oh, and they want to run wild all day long. Three clamor to go hunting in the pasture, four pester to roo in the garden, three others like to splash in the creek, and then there's this irritating one who just mopes around the hen house and pouts," I don't wanna go along; it's boring."

Some nights I'm so exhausted from trying to keep track of everyone that I know my poor old webbed feet are just going to drop right off my short legs.

I suspect, in a brief fleeting moment occasionally, that this motherhood bit isn't all that it's quacked up to be.

SHAMPCO VERSUS "STEAM" CLEANING

A question frequently sked is, "Is 'steam' leaning better than hampooing?" Newspaper ds compare the two ethods and professional carpet cleaners may give conflicting information. Some background information is needed so the answer can be understood.

Over 50 years ago, a handle, flat brush and solution tank were attached to an electric motor and the shampoo method of cleaning carpet was born. There have been many changes in the equipment, but the principle is still basically the same. The detergent solution is appliced to the carpet pile and worked in by the action of the brush bristles.

The rotary brush method gives a good surface appearance to most carpet. On deeply soiled carpet, the mechanical action of the brush may be required to loosen the soil. The action of the brush may produce pile distortion, especially in the hands of the unskilled operator. Carpet with a long pile, soft yarn twist or low density are most likely to have their textures changed.

A few years ago, a machine was developed to redye upholstery furniture in a plant. The machine used boiling water to get better dye penetration and it was observed that the steam laden with water produced cleaning. The machine was then used to clean rugs in the plant. The next step was to adapt the machine so it could be taken into the home. These machines did not produce true steam, but the name carried over from the original upholstery furniture dying machine. Today many of these machines no longer have heaters in them and the temperature is determined by the temperature of water used. Some machines do have heaters to maintain the temperature of the cleaning solution, and several machines do produce solutions with high temperatures.

Increasing the temperature of the cleaning solution will increase the soil removal. Even though the solution in the tank is hot, it may increase the temperature of the carpet only a small amount. It is then blown into the pile in a vaporized form. Almost immediately a large portion of the solution is removed from the carpet by a vacuum. Each of these steps reduces the temperature of the solution. A more accurate term of describing this method of cleaning is "hot water extraction."

Hot water extraction will remove a large amount of soil with little or no texture change. On deeply soiled carpet some mechanical brushing action may be necessary. Several machines have a brush attachment or the shampoo machine may be used first.

From this it would appear that the hot water extraction system is superior to the shampoo method. This is not necessarily true as the appearance of the carpet cleaned by the shampoo method may look better. In most cases the appearance is of the greatest interest.

When the hot water extraction systems were first introduced to the professional cleaners, they used a very hard sell. Some of this hard sell has been continued by the professional cleaners. These ads attempt to descredit the shampoo method of cleaning. In turn, the professionals who use the shampoo method have retaliated in their ads. This has produced consumer confusion.

A reputable cleaner should have both types of machines and, after examining the soiled carpet, he should determine the best procedure to use. After all, he should have much more knowledge and experience to make this decision than the consumer who has obtained the information from advertising.

In the hands of a skilled operator, either machine will clean satisfactorily.

DIETARY FIBER — NATURAL VERSUS COMMERCIAL LAXATIVES

Scientific research cannot at this time substantiate the claims that added fiber in the diet will cure, alleviate or prevent diseases and disorders of the gastrointestinal tract. But both scientists and medical authorities agree that foods containing fiber, eaten in sufficient quantities, can maintain normal elimination processes.

If you are buying over-the-counter products termed as "laxatives" and swallowing, chewing and choking down various cureall for consipation ills, perhaps the addition of fiber in your diet cannot only make you feel better but save you money.

Occasional use of commercially prepared products may be in order. But if taking these products is a habit, you should first check with your physician. No such product should be taken or is designed for consistant use.

Be aware that some physical conditions resulting in constipation and abdominal pain require medical attention and could even be aggrevated by self-diagnosis and self-administered commercial laxatives or a binge of fiberous food. For your best interests and future health, check with your physician if you are experiencing irregularity problems or abdominal pain.

If a medical examination reveals no problem, you can replace the more expensive over-the-counter products with foods that taste good and are good for you – fruits and vegetables, cereals and breads containing whole grains. Ask you physician about fiber in the diet – yours in particular.

As I watch Dollar, my faithful horse, amble towards me through the pasture, it amazes me how slowly he can move. He seems to take deliberately small steps as he picks his way up through the grass, making sure that no tasty green shoot escapes his attention.

I've only called him about five minutes ago and he has now covered about half the distance to me. But I know, the more impatient I get, and the more I urge him to get his body moving, the longer it will take him to reach me.

You see, Dollar knows that we're going riding. He can tell a "going riding" summons from a "come and eat" invitation, seven days a week. I don't know how he does it, even I can't tell the difference in the way I call.

Dollar firmly believes that riding is okay if you have nothing else to do, but one shouldn't be too overjoyed about it. Standing around in the pasture under the old shade tree is much more exciting.

But the highlight in his day is when he gets fed. He can be in the furtherest corner of that huge pasture and as soon as I step into sight, it's time for the running of the Kentucky Derby And you better have his feed there waiting, or the possibility exists that he'll keep right on coming through the fence and help himself.

It seems a shame to me to waste all that speed and talent. Do you think they could devise some horse race with a feed bucket at the finish line?

Farm Women Societies

Berks Co. Society 3

Berks County Farm Women Society 3 held their monthly meeting at the home of Mrs. Harvey Moyer, Boyertown R4.

During the business meeting, conducted by president, Mrs. LeVerne Richard, plans were made for several ladies to help at the Open House, June 11, at Berks Heim.

A slide and lecture presentation was given by Mrs. Ann Newbold on Wild Flowers.

Next meeting will be June 27, 7:30 p.m. at the home of Mrs. Ralph Baus, Boyertown R1. The program will be on safety.

Lancaster Co. Society 1

Lancaster County Farm Women Society 1 met June 3 at the home of Amy Brubaker, with Viola Wolf acting as cohostess. Twenty-three members answered roll call.

President Rachel Bollinger was in charge of the business meeting. The group voted to give $10 to the Easter Seals and $25 to Welsh Mountain Clinic.

Happiness for others, the group's project, will involve members who will do something for a sick or lonely person.

June 24 the Society will have their annual picnic at the Strasburg Railroad. A box lunch will be provided. The train will leave at 4 p.m.

For the program, Mrs. Clyde Brubaker and her daughter, Sara Lynn, talked of sheep and their uses.

Lancaster Co. Society 4

The home of Mrs. Ira Barley, Washington Boro R1, was the setting for the recent meeting of Lancaster County Farm Women Society 4. Twenty-four members attended.

Mrs. Bertha Conrad, an artist who paints both china and glassware, spoke to the Society. She gave a history of china and painted a piece in the presence of the group. There was also a collection of her work on display.

Mrs. Gertrude Yeaglin, president, presided over the business meeting.

On June Soceity 4 will be entertained at the Black Rock Retreat by Society 15.

Lancaster Co. Society 6

On June 3, Lancaster County Farm Women Society 6 met for their dinner at Bishops Restaurant, Hershey, Pa.

Afterwards they were given a tour of Founders Hall. A film of the activities of the privately endowed school where 1500 boys and girls attend was shown.

The next meeting of the group will be at the home of Mrs. Anna Geyer.

Lancaster Co. Society 24

On May 31, Lancaster County Farm Women Society 24 met at the home of Mrs. Louetta Hurst, Lancaster, with 26 members and 6 guests attending.

Mrs. Ruth Hoober, president of the group, presided over the meeting. Donations were made to the county project and to the Lancaster Co. Dairy Princess contest.

Mrs. Ruth Kniss, Bird-in-Hand, spoke on and displayed her "Antique Dolls". She has dolls from the 1830's to the present "bionic doll". Her collection includes dolls of paper mache composition, bisque, and rags.

The next meeting will be held June 17 at 1:30 p.m. at the home of Mrs. Dorothy Witmer, New Holland, when Society 13 will be society's guests at a garden party

Lancaster Co. Society 26

On May 25, Lancaster County Farm Women Society 26 met at the Nellsville Mennonite Church where the group entertained their mothers.

It was announced that a $25 donation was given to the dairy princess pageant.

A ladies trio from the Calvary Independent Church sang several hymns for the group.

Speaker for the day was Dorothy Fry who talked on kitchenware of yesterday

The group's next meeting will be held at the home of Judy Musser. The program will be vegetable carving done by Mrs. Frances Dietz

Refreshments were served

Farm Women Societies

(Continued from Page 46)

after the meeting by hostess Sara Ann Landis and co-hostess Gerry Buckwalter

York Co. Society 35

Joan Beck hosted York County Farm Women Society 35 on May 10.

Members were informed of the following dates: County Picnic-July 26; County Convention - November 2; and the Craft Fair, November 4.

Society 35 will entertain Society 25 on July 13 at a picnic.

Linda Brown, a member of the Loganville 4-H Club, presented a Oriental cooking demonstration.

The next meeting will be on June 8, at 7:30 p.m. at the home of Mrs. Judy Brenneman.

Ida's Notebook

Ida Risser

This morning I got to feeling rather nostalgic; maybe it is because I had a birthday recently. I began to remember how things were when we first moved to this farm.

My husband had one cow, one heifer, two calves and also a truck and a tractor. He attended several Farmer's Markets and sold potatoes and vegetables that we grew. I had a job in Lancaster and a house to tend. But, the house had no running water, no heat (used two coal stoves) and no bathroom for several years. It was a wonderful day when we piped water to the basement from the well down in the corner of the yard and an even better day when we installed plumbing.

In those days, I cleaned every room in the house every week. But as the years passed by and we had six children to upset the order of things, I felt that Saturday had to be clean-up day. Boy, were we all tired by nightfall. However, I really looked forward to coming downstairs, late at night after my bath, and seeing a clean house and hearing the quiet that resulted from having them all asleep in their beds.

As they leave home, I may decide that every other week is often enough to vacuum and scrub floors and polish. After all, with less feet to run through the house, there really is less dirt. No more rows of tiny shoes all polished and ready for Sunday School. No more toys all over the floor and sounds of children bickering as they play.

Now Allen milks some 50 cows in a six herring-bone milk parlor and keeps three tractors and a truck running almost perpetually. And, I have a new kitchen in a restored 1813-brick house.

Some things remain the same though -- the Conestoga still flows along within its banks (most of the time that is) and the sugar peas and strawberries bear each Spring and keep me busy.

Orienteering contest held

NEW HOLLAND -- Orienteering. You've never heard of it?

It's been called everything from "running with a purpose" to "a cross between a treasure hunt and a cross-country race."

Whatever you call it, this sport, which has gained enormous popularity in Scandinavia, is fun and a real challenge.

Recently 26 Lancaster County FFA members found out first hand just how challenging it is when they competed in the Lancaster County FFA orienteering contest held at Middle Creek Wildlife Management Area, Kleinfeltersville.

The contestants were FFA members from three county chapters, and they competed on an individual basis as well as a two person team.

This year the contest was divided into three sections. First, a written exam tested the competitors' understanding of topographic maps and map symbols, their ability to take bearings, and their knowledge of the parts and function of a compass. Contestants then showed their skill in estimating distances by pacing off the distance between three separate flag markers. Finally, teaming up with a partner, they were given a detailed topographic map of a ridge overlooking Middle Creek marked with 10 control points.

It was their task to locate as many of the points as possible using the map and compass and return to the finish line within the 45 minute time limit.

The individual winners from this year's contest were Reggie Bennet, Garden Spot High School, first place, and Jim Weidman, Pequea Valley High School, in second place.

The team taking frst place was Garden Spot with Pequea Valley finishing in second, and Ephrata running third.

The contest, in its second year at the county level, was established to allow more participation in contests by FFA members who are not necessarily production oriented. The contest deals with a skill that would prove helpful in many types of conservation or in resource employment. It can also become a lifelong hobby that adds enjoyment to backpacking, hiking, fishing, hunting, camping, and other outdoor activities.

No Use Tuning

A housewife called her television serviceman and claimed something was wrong with her color set. The repairman asked if there were any describable symptoms "The news is on now and the anchorman has a very long face," she said "Madam," replied the serviceman, "if you had to report what's going on these days you'd have a long face, too"

FUEL OIL HEAT

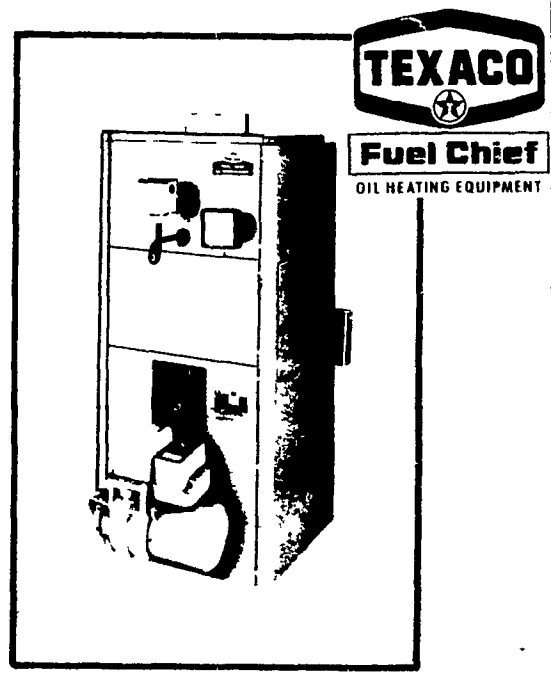
The modern design of the "FC-13" Series Texaco Fuel Chief Wet Base Boiler-Burner Unit features waterbacked heat-transfer surfaces on all sides and bottom to provide maximum heat absorption for greater fuel savings. Integrally cast fins staggered to increase the travel of hot gases in flue passages — prevent loss of otherwise wasted heat. Installation time is reduced to a minimum.

The entire unit is only 20" wide. Exterior is finished in attractive baked-on, decorator-approved colors. Features the dependable, economical Texaco Model TFR Fuel Chief High Speed Flame Retention Oil Burner with non-adjustable stainless steel firing head.

The "FC-13" Series Texaco Fuel Chief Wet Base Boiler-Burner Unit has been manufactured to furnish home-heating at its most comfortable-best!

FEATURES WHICH ASSURE RELIABILITY AND ECONOMY

- FLUSH CABINET — beautifully finished in green Hammertone Extension which completely encloses burner—optional
- INSULATION—Fiberglass blanket retains heat within boiler keeps jacket cool
- WET BASE CONSTRUCTION — bottom sides top and rear of fire chamber are completely surrounded by water backed cast iron sections to assure maximum absorption
- COMBUSTION CHAMBER—Ceramic fiber light weight one piece—molded unit is factory installed eliminates assembly of heavy fragile refractory materials
- BUILT-IN WATER HEATER—copper coil located at hottest point to assure ample hot water for household use the year round
- HEAT FINS — retard upward flow of hot gases for greater fuel economy



- FUEL CHIEF HIGH PRESSURE OIL BURNER — featuring the Texaco Fuel Chief High Speed Flame Retention design with non adjustable stainless steel firing head

BANVEL HERBICIDE

Post-emergence application gets to the root of your tough broadleaf weed problem

Banvel from Velsicol controls hard-to-kill broadleafs . . . smartweed, pigweed, morning glory, thistle, many others.

For one simple reason. Banvel translocates. Absorbed by leaves, stems, roots, Banvel moves with plant fluids from leaf tip to root tip. Destroys as it goes. So, no regrowth. Ask us for application details about Banvel, today.

WE HAVE 8-16-8 PLANT STARTER!

Corn post-emergence
When it's down to:

Which are you using?

For post-emergence weed control in corn . . . what if 2,4-D doesn't work? Like on smartweed.

Banvel herbicide, used alone or tank-mixed with 2,4-D, controls more broadleaf weeds than 2,4-D used alone.

So think Banvel:

. . . When you first see smartweed, velvetleaf, ragweed, cocklebur, pigweed, sunflower, morningglory, lambsquarters, Canada thistle seedlings.

. . . When you're planning to rotate to wheat or oats in the fall or soybeans next spring . . . because BANVEL DOES NOT CARRY OVER.

Your ag chemicals dealer has your supply. Any questions? Call free of charge on the Velsicol Herbicide Hot Line: 800-621-4129 (Illinois callers: 800-972-8381).

Before using any pesticide, read the label.

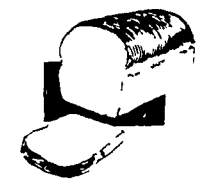
Home on the Range



This week and next week we will be running the overflow of our Dairy Issue's dairy recipes. Keep looking for our new set of themes for the upcoming months, and if you have any suggestions for these themes, send them to "Home on the Range," **Lancaster Farming** Box 366, Lititz, Pa. 17543.

SALMON TERRAPIN

1 tall can salmon
1 cup flour
1 teaspoon salt
½ cup butter
1 pint milk
2 eggs

Stir, flour, salt, and butter into salmon. Then add milk and lightly beaten eggs and combine well. Mixture will be lumpy. Pour into 8 by 8 inch baking dish. Bake at 350 degrees F. for one hour. NOTE: Very good served with baked potatoes.

Mrs. Harold Moore
Franklin, Pa.

BAKED CHEESE SANDWICHES

12 slices bread
12 silces Cheddar or American cheese
4 eggs
2½ cups milk

Make sandwiches of bread and cheese and arrange in flat baking dish. Beat eggs. Combine with milk and pour over sandwiches. Bake at 350 degrees F. for 30 minutes.

Mrs. Harold Moore
Franklin, Pa.

xxx

HOMEMADE BUTTER (BLENDER STYLE)

1 quart sweet cream
½ cup hot water
Salt to taste

Pour sweet cream, cold from refrigeration, into blender. Run blender at high speed until cream is whipped thick. Add ½ cup hot water (from tap) and run blender at low speed until butter forms. Remove with slotted spoon into wooden bowl. Run blender an instant longer and remove any remaining butter. Rinse butter several times in cold water, working it well with wooden spoon until water is clear and butter well drained. Add salt to taste. The cream may have to be stirred once or twice while whipping. Be sure blender is stopped before stirring. Total blending time amounts to about four or five minutes from cream to butter.

Mrs. Rose Hoover
Dallas, Pa.

xxx

SMOOTH AND CREAMY ICE CREAM

1 quart milk
4 eggs, beaten
2½ cups sugar
2 tablespoons cornstarch or clear jell
½ cup milk
1 tablespoon plain gelatin
3 cups heavy cream
¼ cup cold water
3 cups milk
2 tablespoons pure vanilla.

Scald one quart milk. Mix together eggs, sugar, cornstarch or clear jell and milk and add to scalded milk. Cook several minutes. Remove from heat and add one tablespoon plain gelatin, softened in ¼ cup cold water. Chill. Beat well. Add heavy cream, milk, and pure vanilla. If preferred, omit last two ingredients, and add one quart fresh fruit. Makes six quarts. Freeze in hand cranked ice cream freezer. This ice cream stores well in refrigerator freezer compartment.

Mrs. Eli Sauder
New Holland, Pa.

xxx

CREAM CHEESE CHIP SQUARES

2 (1 pound) rolls of refrigerated chocolate chip cookies
¾ cup chopped nuts (optional)
Filling:
2 (8 ounce) packages cream cheese, softened
2 eggs, slightly beaten
½ cup granulated sugar
½ teaspoon vanilla

Remove paper from the rolls of chocolate chip cookies. Slice in ½ inch pieces and set aside to soften. In a large bowl, beat softened cream cheese. Add the eggs and mix well, add sugar and vanilla and beat until smooth. Clean beaters often, set aside.

Using one roll of chip cookies, completely cover the bottom of 13x9x2 inch ungreased pan, patting into place with fingers. Pour cheese filling mix over cookie layer. Place sliced pieces of second roll on cheese mixture. Not necessary to completely cover cheese mixture. Do not press into filling, just lay on top.

Bake at 325 degrees for 30 minutes, until cookie dough looks done. Makes large amount, cool to cut. Keep this in refrigerator.

Mrs. Nellie Heisler
Tamaqua, Pa.

xxx

COCONUT CREAM TAPIOCA

4 cups milk
1 cup sugar
4 eggs, separated
3 tablespoons minute tapioca
¼ teaspoon salt
½ cup shredded coconut
4 tablespoons sugar

Scald milk in top of double boiler.. Add salt and tapioca and cook 15 minutes or until clear. Stir frequently. Combine egg yolks, sugar, and coconut. Add some of the hot mixture and stir until a smooth paste is formed. Add paste to hot tapioca and continue to cook for two minutes, stirring constantly. Pour into a greased baking dish. Cover with meringue made by adding four tablespoons sugar to stiffly beaten egg whites. Sprinkle with coconut. Bake at 300 degrees F. for 15 minutes or until golden brown. Makes six to eight servings.

Mrs. Lois Martin
Landisburg, Pa.

xxx

BERRY AND CHERRY PUDDING

2 eggs
½ cup sugar
1 tablespoon butter
3 cups flour (2 cups if no juice on berries)
1 cup sweet milk
1 cup berries or cherries
1 teaspoons baking powder

Mix all ingredients together. Bake at 350 degrees for 20 minutes.

CHEESE CUSTARD

1 (8 ounce) package cream cheese
½ cup granulated sugar
¼ teaspoon salt
3 beaten eggs
1¼ cup milk

Let cheese soften at room temperature. Put in bowl and add sugar and salt. Cream together thoroughly. Add beaten eggs. Stir until well blended. Add milk; mix well. Pour in eight-inch unbaked pie crust. Bake at 450 degrees F. for eight minutes, then at 425 degrees F. for 35 minutes more.

Above two recipes by:
June E. Boyer
110 Biesecker Rd.
York, Pa. 17404

xxx

CHEESE PIE

1 pound cottage cheese
1½ cups sugar
3 tablespoons cornstarch (little more than level)
3 egg yolks
½ teaspoon salt
1 can evaporated milk
2 cups milk
3 egg whites, beaten

Combine above ingredients, adding beaten egg whites last. Bake in nine inch pie shell at 350 degrees F. for one hour.

Mrs. Samuel Brubaker
Seven Valleys, Pa.

xxx

STRAWBERRY CUSTARD PIE

4 slightly beaten eggs
½ cup sugar
1 teaspoon vanilla
2½ cups scalded milk

Mix eggs, sugar, and vanilla Slowly stir in hot milk Pour in unbaked pie shell Add one cup sliced strawberries and bake at 400 degrees F for five minutes then reduce to 375 degrees F until firm About 25 minutes

BUTTERMILK PIE

3 eggs
1½ cups sugar
1 heaping tablespoon flour
1 cup buttermilk
½ stick butter, melted
1 teaspoon vanilla

Beat eggs, sugar, and flour together. Mix well, and add buttermilk. Stir in melted butter gradually. Mix. Do not beat. Pour into unbaked pie shell and bake in moderate oven about 30 minutes until well set. Pie will not yield to movement when baked.

Above two recipes by:
Donna Wright
Millerstown, Pa.

xxx

VANILLA ICE CREAM

2 envelopes unflavored gelatin
2 cups milk
2 cups sugar
¼ teaspoon salt
4 eggs
1 cup heavy cream or evaporated milk
4 teaspoons vanilla
1 package vanilla instant pudding

Soften gelatin in ½ cup cold milk. Scald 1½ cups milk and stir into gelatin mixture until it dissolves. Add sugar and salt, stirring until dissolved. Beat eggs at high speed for five minutes. Add cream or evaporated milk, vanilla, pudding mix, and then the gelatin mixture. Pour into four quart freezer can. Add additional milk to bring ingredients to fill line, Follow usual procedure for freezing and "ripening" ice cream. CONTRIBUTOR'S NOTE: This recipe is refreshing, but not too rich.

Mrs. Betty Moore
Nottingham, Pa.

xxx

SOUR CREAM SUGAR COOKIES

1 cup butter
2 cups sugar
3 eggs
1 teaspoon vanilla
4½ cups flour
1 teaspoon salt
2 teaspoons soda
1 cup sour cream

Cream butter and sugar, add eggs, and vanilla. Mix well. Add flour, salt, and soda alternately with sour cream. Drop by teaspoonsful, top with cinnamon sugar. Bake at 400 degrees F. for six to eight minutes.

Mrs. Harold Moore
Franklin, Pa.

xxx

CHEDDAR CHEESE PEANUT BALL

2 cups (8 ounce) shredded cheddar cheese, at room temperature
1 package (3 ounce) cream cheese
2 tablespoons finely chopped red onion
1/8 teaspoon curry powder (optional)
½ cup chopped salted peanuts

Beat together cheddar and cream cheese until well blended. Stir in onion and curry powder. Shape to form a cheese ball. Roll in peanuts. Cover and chill to blend flavors. Serve at room temperature with assorted crackers. Yields about two cups of cheese spread.

My Thoughts ...

And welcome to them

By JOANNE SPAHR
Assistant Editor

I'm resolved to it.

It took a while, but I've come to accept it, now.

I didn't want to at first, but now I can handle it with a smile

Yet, I still wince at the thought

There I was, loving Aunt Joanne, just returning from taking her adorable nephew for an educational walk to the barn, only to be slapped in the face with the awful truth.

The scene went something like this:

Joanne: Well, Jeremy, tell Grandma what you saw in the barn

Jeremy: (In endearing first word lisp) Cows

(Laughter and giggles from pleased Grandma and Aunt)

Joanne· Jeremy, tell Grandma who took you to see the cows

Jeremy (Dead silence)

(Grandma and Aunt look at each other puzzled)

Joanne (In attempt to get cute, adorable nephew to reward her by saying her name.) Jeremy, tell Grandma who took you to see the cows.

Jeremy. (No answer.)

Joanne· (More firmly, frantically trying to get beloved child to utter the word "aunt ") Jeremy. what am I?

Jeremy (With light of recognition in his little blue eyes.) Cow.

Joanne· (Chuckling from child's error) No, Jeremy, what am I?

Jeremy (Sticking to his guns) Cow

Joanne: (This time pleading with hurt in voice) Jeremy!

Jeremy: (Looking aunt straight in the eye and saying firmly, almost viciously) Cow.

Joanne: Jeremy, I'm not a cow!

Jeremy: (Matter-of-factly, ending the conversation once and for all) Cow.

Well, there it was. Jeremy thought I was a cow Hurt, I began thinking about a so-called compliment I'd received a few weeks earlier

After a pleasant conversation with a dairy farmer, that dairyman turned to me as he parted and said, "I'm going to name my next heifer calf Joanne "

At the time I took it as a compliment. Now, I didn't know.

Then I got cheerful At least, I realized, if there's a cow named Joanne, there's hope that I can still get my nephew to say my name

Del. dairy princess has eventful year

NEWARK, Del. – June is Dairy Month – the last and busiest month of Betsy Cook's reign as Delaware Dairy Princess. It's been an eventful year for the Middletown High School senior.

It was last July at the Delaware State Fair when Betsy was crowned by Governor duPont. The judges had been favorably impressed by her dairy farm background, her attractive appearance, the gaily festooned "pretty cow" she brought along, and her enthusiastic cheer: "...Let's go! Let's grow! Let's glow! with moo-tritious milk!"

Many elementary school children have learned those words in the last 11 months.

Visiting schools has been a frequent and favorite royal activity. The children are always thrilled to meet a real princess, complete with crown. And what second grader can resist Betsy's recipe for the "Magic Cow?" (Put two teaspoons of a powdered fruit-flavored drink mix in a cold glass of milk. Shake, and enjoy.)

In the course of the year, Betsy has appeared at a number of fairs, sometimes handing out literature about her favorite subject, sometimes offering samples of freshly churned butter. She has also spoken to a number of community groups, including, naturally enough, all three county chapters of the Delaware Dairy Herd Improvement Association.

The pace picks up in June, not only because it's Dairy Month, but also because it's fair time for many a community. And, of course, every fair wants to boast of royalty.

Betsy Cook is serious about milk. The daughter of a Glasgow dairy farmer and a homemaker with a degree in nutrition (both are graduates of the University of Delaware), Betsy wants everyone to know how good milk is.

It's a subject she knows a lot about. Betsy and her two brothers and one sister have lived their whole lives on the farm. All have owned and cared for their own animals over the years, winning many ribbons and trophies through 4-H.

Betsy is especially anxious to quell the nasty rumor that milk is fattening. She notes that many foods which people don't think of as fattening actually have many more calories than milk. (A cup of whole fresh milk has 159 calories; nonfat skim milk just 81 – plus a lot of good nutrition. Compare that to a 3.5 ounce veal arm steak, at 298 calories; 3.5 ounces of baked flounder, at 202 calories; a half cup of cooked dry beans, at 340 colories; or half an avocado at 185 calories.

Without a doubt, a rich part of Betsy Cook's life will end with the crowning of the new Delaware Dairy Princess at the Delaware State Fairy this July. But come September, Betsy will enter Virginia Polytechnic Institute to study the consumer aspects of food and nutrition. If everything works out as planned, she's looking forward to a whole career of speading the good word about "Moo-tritious Milk!"

Delaware Dairy Princess Betsy Cook takes time from her June Dairy Month activities for a milk break. She'll be appearing at the Philadelphia Children's Zoo and the Captain Noah TV program on June 15; the Kent-Sussex County Holstein Show on June 23; and the New Castle County Holstein Show on June 24.

Rose diseases handled by chemicals

FLEMINGTON, N.J. – The number one plant in the popularity contest for use in the home garden is the rose.

It is also true that the plant with more disease problems than about any other garden plant, says Spencer H. Davis, Jr., Extension specialist in plant pathology at Cook College, Rutgers University.

Two common and troublesome diseases are black spot and powdery mildew, says Dr. Davis. Black spot causes, as the name implies, spots on the leaves that eventually result in loss of leaves.

By late Summer all bottom leaves will be dead and gone. The rose may look like a little green umbrella.

Powdery mildew doesn't result in much defoliation, but it coats the leaves and flower buds with a powdery fungus growth. Leaves curl, buds fail to open and plants suffer.

Several chemicals prevent one disease or the other. And many garden mixtures have one of each type of chemical in the package. But only two - phaltan and benomyl - give good control of both black spot and powdery mildew.

One should apply sprays or dusts regularly, Dr. Davis suggests. Once a week is a good schedule starting now. And the plants will keep their leaves and produce flowers all Summer.

There are other diseases, as well as insects, that attack the garden rose. These are described and control recommendations are given in a bulletin called, "Roses for the Home." In New Jersey one can ask his county agricultural agent for a free copy. He is located in the Hunterdon County Extension Center, Route 31, north of Flemington.

This auctioneer is a woman!

By JOANNE SPAHR

CARLISLE – The inscription under her name in her 1964 high school yearbook said only one thing – "Wants to be an auctioneer"

And they laughed because she was a girl.

Undaunted, she thought to herself, "Let them laugh, I'll show 'um."

And she did.

Today Carol Burruss, Carlisle, is that auctioneer that she always wanted to be and she is one of only two or three in the state. Back in 1964 when opportunities for women weren't nearly as abundant as they are today, Mrs. Burruss forged the way for women in auctioneering, a profession she grew up around and always loved.

"My dad (Paul Boyles) has owned Potties Auction House in Newville for 32 years," relates the smiling Carol, "And, ever since I was little, auctioneering was something I thought was fascinating."

"In fact," she continues, "I used to get up and holler when I was a little kid. One time our auctioneer became sick and I yelled, 'I'll do it, I'll do it!' That was when I was about 12 or 13 years old."

It was around that same age that this self-proclaimed tomboy made up her mind to be an auctioneer. And, even though she knew it wasn't going to be easy, she set about the task when she was still a senior in high school.

She began the process by writing a letter to Reppert's School of Auctioneering in Decator, Ind., telling them of her aspirations and her desire to enter their school. Unfortunately, they never wrote back.

Carol, however, did not give up.

"I made a pest of myself," she says with her big, easy grin. "I just kept writing for over a year until they accepted me. I think I wrote four or five letters until I got a reply."

Up to that time no women had ever been admitted to the three-week school and when Reppert's agreed to accept her, she was told that the school was doing it only on a conditional basis.

"They said they'd try it one time," she notes with her pleasant, very-slightly-southern-tinged accent.

The main drawback, as the school saw it, was that women would detract from the program. But, actually, says Carol, they have now found that men actually work harder when women are enrolled because they don't want a little lady showing them up.

At the same time Carol was enrolled, two other women were accepted, as well, and the practice of taking women has continued ever since.

But, Carol points out, just because they were accepted doesn't mean that the women had an easy row to hoe.

"We poor girls," Carol laments with her usual infectious smile and laughing eyes, "We had to furnish our own living quarters and we had to worry about our own transportation from the hotel where we were staying." The men, in the meantime, lived in dormitories.

Some of the teachers did take pity on the women, however, and attempted to make life easier for them.

"When they did that," says Carol, "I told them I didn't want favoritism. I wanted to be treated just like everybody else. I think I shocked them."

Once she finished her course, she had another obstacle to overcome – her apprenticeship. As was to be expected, few auctioneers wanted a girl apprentice at their side. But, she was able to obtain one with Dean Shull of Perry County.

She vividly remembers her first sale with Shull. It was her uncle's farm sale, and the first time she got up she couldn't talk because of "stage fright."

"I tried, and I'm still trying," she says with laugh. Even today, she notes, she still gets butterflies in her stomach when she steps in front of a crowd. But, over the years she has developed an attitude which helps her greatly.

"I just say to myself, 'Nope. They're not going to laugh at me. I've heard worse than myself.'"

But, there's still some

Farm Drainage Pays High Returns

Investment	Typical Annual Return
Land Drainage	21-46%
Farm Buildings	3-23%
Farm Land	11%
Stocks	7.4%
Bonds	6.1%

Even with the conservative figures shown above, it's obvious that land drainage should top farmer's lists of investment priorities.

✓-CHECK THESE BENEFITS ...

- Better soil aeration
- Better soil moisture conditions.
- Longer growing seasons
- An increased supply of nitrogen to the plant.
- Soils warm up more quickly
- Certain toxic substances and disease organisms are removed.
- Soil erosion can be reduced
- Deeper root development enables plants to better withstand summer droughts.
- Valuable livestock water supplies are obtained.
- Increased crop yields and improved crop quality

Lady auctioneer

(Continued from Page 55)

problems being a woman auctioneer.

"A lot of people think it's a man's job," notes Carol in a serious tone. "There are still some people who are jealous of women."

But, regardless of the occasional friction, Carol finds her job rewarding.

"It's a very interesting job. No two sales are the same," she says. "There's always something new to learn about."

According to this experienced auctioneer, the learning aspect of the job is one of the reasons she started to call.

"It keeps you acquainted with the world," she notes. "I don't claim to know everything. I just want to learn as I go."

But, of course, Carol says that an auctioneer must stay abreast of the going prices for all types of objects from machinery to tools to animals to antiques. That's a large job, but Carol manages to stay on top of things. She also has the philosophy of catering to the public and letting them start an object at the price from which they want to see it begin.

"I always say you can't start something too low, but you can start it too high," she points out.

The intricacies of auctioneering are really difficult for Carol to talk about, because there are so many variables involved.

"You have to know your buyers," she points out, "And, you also have to stay one step ahead of the public."

"I don't know," she concludes. "It's hard to say how to be a good auctioneer."

There is one thing she does know for sure, however.

"The public's got to like you," she states matter-of-factly. "If they don't like you, you don't have a good sale."

"Some auctioneers are boring, and if you let the crowd die, you won't make any money. People have to be able to say 'I enjoy following her sales.'"

And, most likely, people can say that about Carol. At least she can say the reverse.

"I just love the public" she states flatly. "My husband is the same way I am. We like people."

Carol's husband is Hap Burruss, a self employed hay dealer. And, as is to be expected, she met him at a sale – a horse sale. However, in this particular instance, she wasn't calling the sale; instead, she buying.

"I went down to pick up quiet horses," she says with a giant grin on her work-tanned face, "instead, I picked up a man," she laughs

At the age of 19 men were the furthest thing from her mind, but within a year, the two were married. Today they have three children – Paul, age 11; Tammy, age 9; and Linda, age 6. And, the whole family gets in on the hay buying, selling, and hauling.

"In the Summer, the children go with us 90 per cent of the time," says Carol. "I think that a child who travels can cope better with life. From going with us they know what's right from wrong."

The hay dealing schedule is a rigorous one. The day usually begins at 5 or 5:30 in the morning and, until the hay is delivered and the chores done, it may be as late as 12:30 the next morning before Carol gets to bed.

The Burruss's haul hay every day from Monday through Saturday, but on Wednesdays and Saturdays Carol makes sure she is home in time to call at Potties Auction House. One day per month Potties has an all day auction, and on that day Carol doesn't help with hay hauling.

In between all this work, Carol manages to also lead two 4-H clubs – the 4-H Light Horse and Pony Club of Cumberland County and the 4-H Cumberland County Swine Club.

The Burruss's also have pigs of their own, "because of the children. They love it." All together they have nine registered Spotted Swine sows and a boar as well as about 30 market swine. They also have 12 registered Quarter Horses.

Hap Burruss also refinishes furniture.

It's a busy life, but a good one, for Mrs. Carol Burruss, auctioneer, wife, mother, hay dealer, and 4-H leader.

4-H'er to travel to Europe

UNIVERSITY PARK – Gary E. Hornbaker, of Shippensburg R5, has been selected to visit Europe this Summer as a participant in the People-To-People Citizen Ambassador Program.

An outstanding 4-H member, Gary will join other Citizen Ambassadors in Washington, D.C. on June 27 for an orientation program prior to a 38-day visit to England, Switzerland, France, Germany, the Netherlands, and Russia.

According to Henry T. Moon, 4-H specialist at Penn State, Gary and other members of the group will travel by air and bus as they experience homestays with host families, visits with European youth groups, tour historical sights, and meet new friends from many different cultures.

Gary, the son of Mr. and Mrs. Paul E. Hornbaker, has been a 4-H member for 10 years. He has participated in State 4-H Capital Days, Port Royal Canadian Winter Fair, Pennsylvania 4-H Leadership Congress, State 4-H Achievement Days, and Pennsylvania All-American Judging Forum.

He received the Outstanding 4-H Dairy Member Award, was a Distinguished Holstein Junior Member, and State 4-H Award winner in the citizenship category.

WANTED:
tractor dealers to make and sell profit!

Case Franchises Available In The Reading & Everett, Pa. Areas.

When you're selling farm machinery, your customers rightfully demand products that will turn them a profit And being a businessman, you in turn expect a profit from your services

You both profit with a Case tractor franchise As a Tractor Specialist, you will sell 14 sizes of farm tractors and a line of heavy-duty tillage tools Period You needn't scatter your selling power over the full range of farm machinery Your service shop is expert on one commodity farm power Your parts inventory is cleaner and more financially manageable Your used equipment lot consists largely of faster moving used tractors

Light construction power too if the Case utility tractor franchise is available in your territory Call or write us We'll be glad to outline the full potential of a Case franchise in your area

NOW...FINANCE CHARGES WAIVED ON USED TRACTORS & IMPLEMENTS

Trade now for one of our ready-to-go used tractors. Get several months of use...with no finance charges imposed until September 1, 1978. John Deere Financing can help with your purchase and keep more of your money available for other uses this season.

What's more, new John Deere implements and used implements of any make can also be financed as part of your purchase.

Stop in or call us. Be sure to see the fine selection of tractors we have in stock. This offer is for a limited time only!

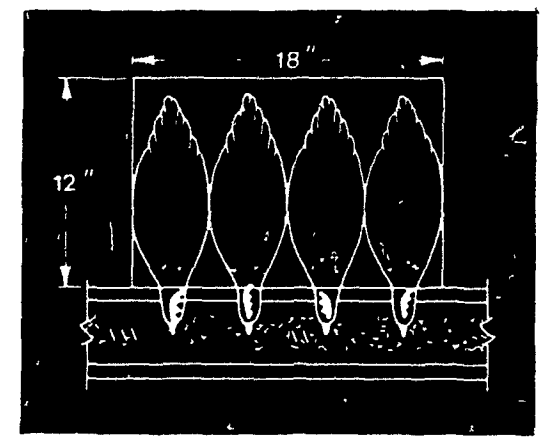
DISTRIBUTOR OF CENTRAL TRACTOR PARTS CO

THE REVERSE CAGE

EVERYBODY'S TALKED ABOUT IT. A. R. WOOD BUILT IT.

The 4-Deck Reverse Cage Slant Back System from A. R. WOOD, Is Built To Deliver EXTRA NET PROFIT: UP TO 50¢ EXTRA NET PROFIT PER HEN PER YEAR!

Research has confirmed that less competition at the feed trough is one key to more eggs and more net profit. With proper management, the Northco® 4-Deck Reverse Cage Slant Back System from A. R. Wood will deliver extra net profit from the day it's installed. Here's why: ☐ The extra equipment costs are offset by savings in building costs (in new construction). ☐ There's no increase in operating cost, no extra feed. ☐ The Reverse Cage delivers fewer cracked eggs. ☐ Slant back design eliminates the need for dropping boards and dropping board scrapers. ☐ The Northco® Core Auger mixes the feed as it moves, to prevent feed separation. ☐ There's only a 2" setback per tier, so there's easy access to all levels.



NORTHCO® 4-DECK PLANNING SHEET

FOUR DECKS — REVERSE — SLANT BACK CAGES

4 hens per 18"x12" cage
54" Long Sections

24 cages/section/row
96 hens/section/row

21 33 hens/foot/row
Row width — 52" (Rail to Rail)

PLANNING TO SELL YOUR FARM?

Selling a farm is more than running an advertisement. It involves a thorough knowledge of soils, crops, livestock and financing. Kissinger Leonard & Associates Farm Sales Staff has extensive farming and agricultural financing experience, and combined with the firms 45 years of service in Central Pa., a detailed professional farm sales program has been developed. If you are thinking of selling we would appreciate the opportunity to explain this program to you at your convenience, without obligation. For more information, please feel free to call or write the office or call any of the sales associates listed below.

IH FULL RANGE TIRE GAUGE

FOR: • FARM & INDUSTRIAL TRACTORS
• LAWN & GARDEN TRACTORS
• TRUCKS • AUTOS
• TRAILERS & CAMPERS • CYCLES

★ Sturdy construction with unbreakable crystal.
★ Easy-to-read dial gives pressure from zero to 100 psi.
★ Brass gear movement assures accurate reading of tires filled with either air or liquid.
★ Correct air pressure makes driving safer, giving you flatter cornering, smoother braking, safe steering, and longer tire life.
★ Under-inflation by only 5 psi will increase tread wear, impair handling, and lead to premature tire failure. Over-inflation reduces tread contact with road surface and may cause skidding and poor braking performance.
★ National Bureau of Standards survey showed most gasoline stations air towers are off an average of 4 psi
Ensure Accuracy — Use An IH Full-Range Tire Gauge!

Reg. Price $4.55

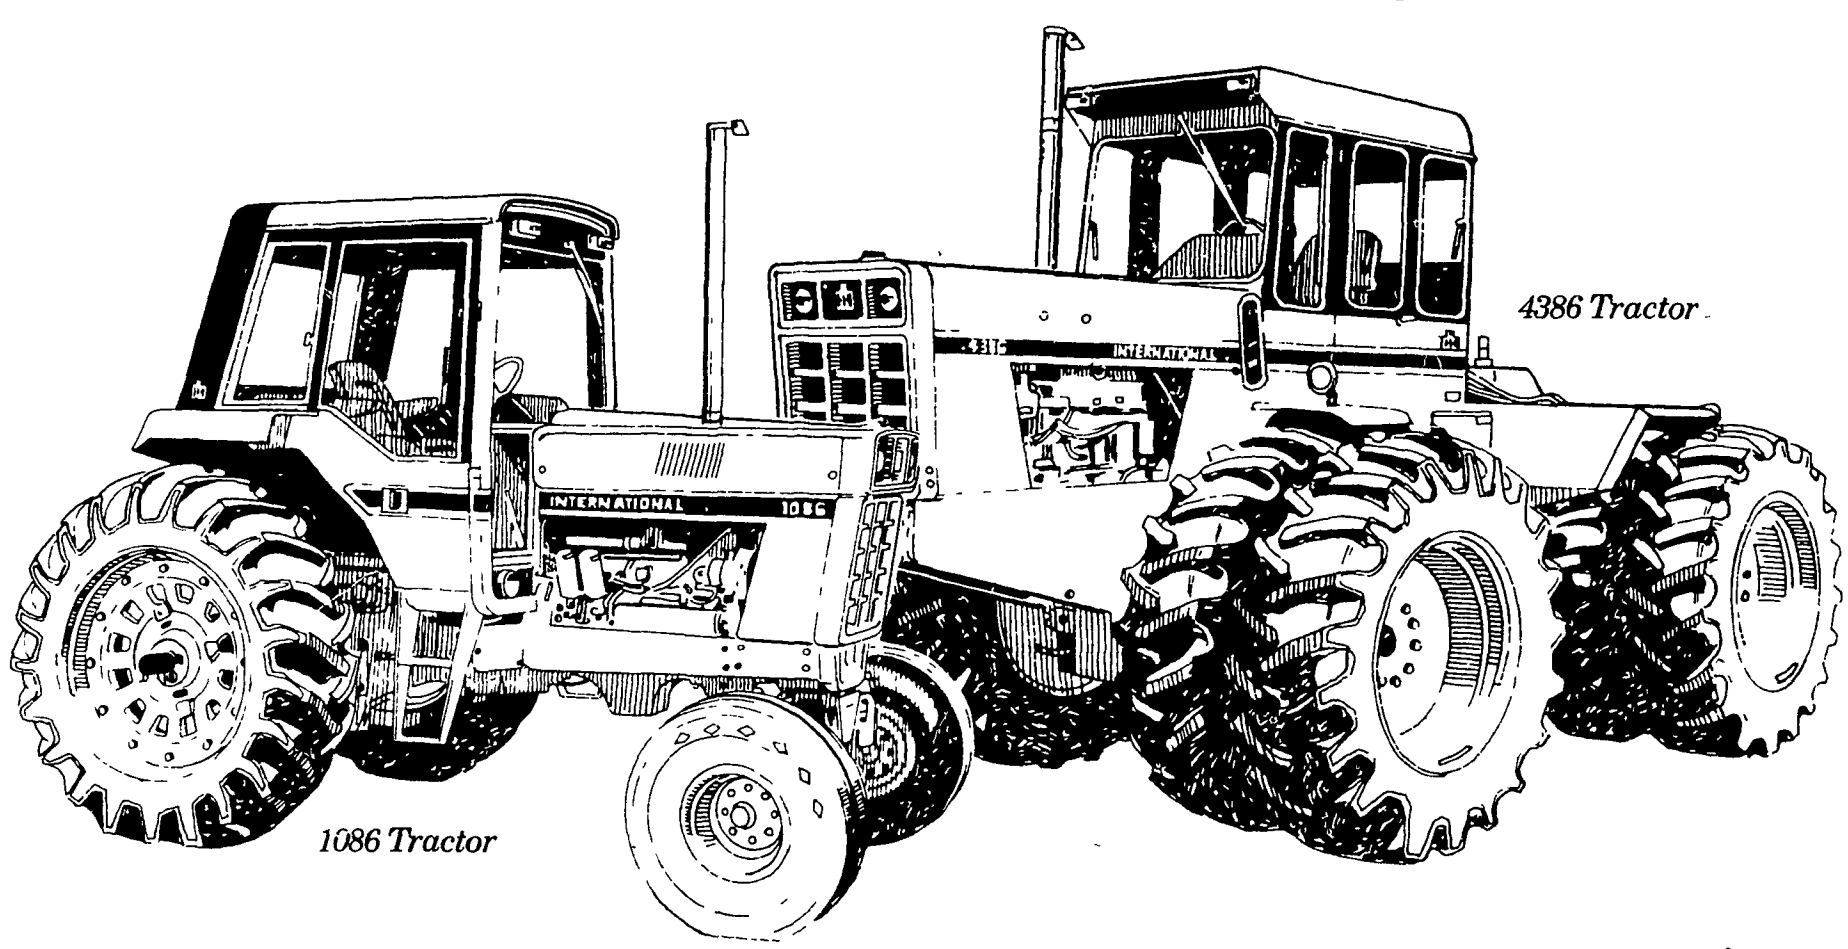
THE IH® TWO-YEAR TRACTOR WARRANTY.



1086 Tractor

4386 Tractor

THE FINEST EVER OFFERED.

We're your Right Connection for a complete, two-year warranty on every IH tractor over 85 horsepower. That's every one of the popular, new Series 86 tractors, both two-wheel and four-wheel-drive.

This unique warranty covers every part on the tractor—every single one—except for the tires and radio, which are warranted by their own manufacturers. It's a complete warranty for two years or 1500 working hours, whichever comes first.

Compare other warranties. No other tractor warranty even comes close to this new IH air-tight protection plan. So why not come on in and make The Right Connection with the only tractors covered by a complete, two-year warranty? The finest ever offered.

It's Time To Think Haylage Treatment

Ensil-ate™

Developed by

MASTER MIX RESEARCH

The Silage Preservative With A Real Difference

WHAT IS IT?

ENSIL-ATE is a silage additive designed to

- Reduce Rancidity
- Prevent Oxidation and Over-Heating
- Inhibit Mold Growth
- Increase Palatability of any Ensilage

$1 invested for ENSIL-ATE per ton can return $3 per ton in added feeding value

ENSIL-ATE has its own feed value!

- Protein 11 percent - Fat 2 percent - Fiber 35 percent

ENSIL-ATE adds highly digestible protein and fiber in the form of ground soybran flakes.

ENSIL-ATE prevents initial run off.

- 10 lbs. of Ensil-Ate will absorb 40 lbs. water.

ENSIL-ATE is perfectly safe to use and contains only all-natural proteins.

ENSIL-ATE is backed by leading experimental stations as well as Master Mix Research.

HOW IS IT USED?

ENSIL-ATE requires no additional equipment.

It should be added to your silage at the rate of 10 lbs. per ton. Packaged in 50 lb. paper sacks, each bag will effectively treat 5 tons of silage. Simply spread the bag on the silage wagon before or during filling.

REMEMBER -

You can mix 10 lbs./ton easier and more thoroughly than 1 lb./ton of silage that most additives require.
ENSIL-ATE can also be added as the silo is being filled.

FOR MORE DETAILS ON HOW YOU CAN GET AN AVERAGE ADDED RETURN OF $3 FOR EVERY TON OF HAYLAGE YOU PUT UP THIS SPRING, CALL OR VISIT YOUR

MASTER MIX DEALER TODAY!

YOU'LL BE GLAD YOU DID!

Beef falsely accused as inflation leader says Angus official

ST. JOSEPH, Mo. – "Despite recent price increases, beef is not an inflation leader, and in fact is a bargain compared to other consumer goods," contends Dr. C. K. Allen, executive secretary of the 39,000-member American Angus Association, headquartered here.

"Since 1973 the price paid to farmers and cattle feeders for beef on the hoof has increased only 18 per cent," Allen reports. "During this same period retail beef prices have increased 30 per cent, food prices are up 48 per cent and the average price of all consumer goods is up 46 per cent. At the same tim per capita disposable income is up 53 per cent.

"It is true that beef prices have gone up dramtically in the last few weeks," Allen said in a letter to USDA officials and national legislators and in a news release to the nation's food editors, "but this price increase is the result of a decreased supply of beef coupled with continued strong demand. The prices of most products such as labor, steel, automobiles, postage and taxes go up continually and are almost never reduced. On the other hand, beef cattle prices go up and down as supply and demand change. Over the years this has resulted in a lower overall price increase for beef than for most other products."

Allen said that he is extremely concerned about adverse publicity the beef industry is receiving from some analysts and media.

"The headlines indicting beef as the major cause of inflation today are clearly inaccurate. Beef prices are just recovering from a drastic decrease that provided beef to consumers below the cost of producing it on U.S. farms and ranches," he said. "There was no intervention then when cattlemen were losing their lifetime savings at the low part of the beef cattle cycle and there should be none now that prices are recovering

"While beef prices may seem high in comparison to a year ago, it is in the best interest of consumers to allow the free market, supply and demand situation to function." Allen said. "Consumers are partially dependent on American political leaders to insure a continued adequate supply of high quality, healthful beef. This can be accomplished over the long run, only if cattle producers are permitted to stay in business, make a profit, and pay off the debts they accumulated during the past few years."

Calf housing plans available

NEWARK, Del. – There's been an unusually large amount of interest in calf and dairy replacement housing this Spring. To meet this need, the Delaware Cooperative Extension Service has made available plan No. 6234, "Dairy Replacement Housing."

According to Delaware Extension agricultural engineer Ernest Walpole, the plan shows several arrangements to suit herd sizes ranging from 50 to 100 milking cows.

The structure is an open-front (to south) shed with several sizes of free stalls to fit calves of various ages. Thought has been given to provide the correct number of stalls of each size for the probable number of animals in each age group.

For example, there are nine crates for new calves; six stalls for calves four to five months old; six stalls for calves six to eight months old; 16 stalls for calves nine to 15 months old; 18 stalls for calves 16 to 20 months old; 16 stalls for calves 21 to 24 months old; and 15 stalls for dry cows.

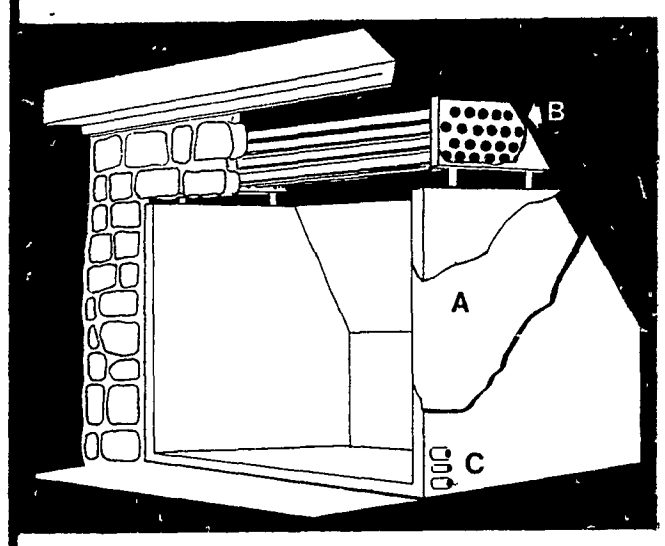
This would be a good distribution for the dairy farmer with 70 to 80 cows with 60 to 65 milking at all times.

The plan provides for hay and silage feeding while keeping each age group separate. The location of each group is controlled by gates to facilitate feeding and manure scraping.

This sytem, featuring loose housing, south facing open sheds and free stalls sized for the animals, is a healthful, convenient labor-saving way to raise young stock.

Plan No. 6234, "Dairy Replacement Housing," is available free from: E.W. Walpole, Extension Agricultural Engineer, University of Delaware, Newark, DE 19711.

Hydro-Heater will cut your fuel costs . . . Can heat your whole house, even when it's zero outside!



Why settle for a conventional fireplace when you can have a beautiful efficient Hydro-Heater?

A A 1¼' water jacket surrounds the fire on back sides and bottom These water jackets help to absorb heat from the fire

B Directional flow tubing captures the heat that is normally lost up the flue 65% of the heat collected in the Hydro-Heater is absorbed by the tubing section This heat is then transferred to your existing heating system

C These fittings connect the Hydro-Heater to your existing system The heat collected by the Hydro-Heater is transferred to every room of your house via your normal heating ducts or radiators A built in safety system assures that the Hydro-Heater temperature remains below 210°

Various sources named for imported cheeses

ROSEMONT, Ill. – The rage American ate 15.9 nds of cheese in 1977. Of amount, less than one nd or about 6 per cent imported. The bulk of ign name cheese con- ned here was produced in United States.

he average American 1.25 pounds of Swiss ese per year with .35 nd imported. Top source 1977 imports was Finland, supplying 30 per cent.

Next were Austria and Norway at about 20 per cent each. Switzerland provided only 13 per cent. Leading suppliers of the balance were Denmark and Germany, with smaller amounts coming from ten other countries.

Italian cheese imports include Pecorino, Romano, Reggiano, Parmesano, Provolone, and Provolette. Average U.S. per capita consumption of Italian cheese is nearly 4 pounds with imports in 1977 only .13 pound per capita.

Pecorino is, by far, the leading imported Italian cheese. Approximately 60 per cent comes from Italy, 19 per cent from Romania, 11 per cent from Greece and the balance from seven or eight other countries.

Reggiano and Parmesano comprise 17.5 per cent of Italian cheese imports, with approximately 80 per cent coming from Argentina and 20 per cent from Italy.

Romano accounts for 15 per cent of the imported Italian cheeses. Practically all of it comes from Argentina.

Provolone and Provolette make up the remaining 8.5 per cent of imports in the Italian category. Nearly all comes from Italy.

The U.S. is apparently almost self-sufficient in soft Italian cheeses. Our government reports that, in 1975, we produced and consumed 457.6 million pounds of Mozzarella and 81.3 million pounds of Ricotta.

Per capita consumption of Cheddar and similar cheeses is about 9.0 pounds per year. Cheddar is 75 per cent of this total. The remaining types include Colby, washed curd, stirred curd and Monterey Jack.

Imports are almost insignificant at only .07 pound per capita per year. Australia and New Zealand are the major sources, with smaller amounts coming from Canada and four other countries.

Americans consume about .11 pound of Edam and Gouda per year. The U.S. imports approximately .04 pound, or a little more than one-third of what is consumed. The Netherlands supplies about 87 per cent of our imports. Smaller amounts come from Portugal, Finland, Argentina ans six other countries.

U.S. per capita consumption of Blue Cheese is approximately .18 pound per capita. In 1977 we imported about .016 pound per capita, or less than 10 per cent of our needs. Denmark supplied 90 per cent of this amount; the rest came from six other countries.

Americans consume only .01 pound of Roquefort per capita annually. We import all of our requirements. Because of legal rights and restrictions, France is the only supplier.

The largest single category of cheese imports consists of "other" cheeses. They amount to .36 pound per capita, or approximately 38 per cent of our imports.

Many types of foreign made cheeses are consumed in the United States. They vary from skim milk cheese to exotic types. New Zealand, Denmark and France are the leading exporters to the U.S. In addition Switzerland, Sweden, Poland and 20 or more countries send us cheeses included in the "other" category.

Judging school set in York

DELTA – The Junior Holstein Club of York County will sponsor a judging school on Saturday, June 24, for all youth and adults interested in brushing up on their dairy judging skills.

Paul and Kathy King, of Kingway Farms at Delta R2, will host the educational seminar, set to begin at 10 a.m. and run through mid-afternoon.

Official for the school will be Dr. James McCaffrey, well-known area dairy cattle specialist.

"This is not a contest, just a learning opportunity," stresses Kathy King, a leader of the Junior Holstein Association. "No one will be expected to compete with others or to turn in their scoring sheets for marks or placings."

Members of the 4-H and FFA dairy project areas are especially urged to take part in the school. Lunch will be available for a small fee, or participants may supply their own meal.

No pre-registration will be required to attend.

USED TANKS AND MILKING EQUIPMENT IN STOCK

The dairy cow is a modern animal

By DEBBIE CLAYTON
Asst. Agricultural Editor
University of Delaware

NEWARK, Del. – Back before Delaware was known as the First State, there were no handsome black and white cows to complement the green and gold pastures of the countryside. But then there was no such thing as a dairy cow either.

"Until about the middle of the 19th century, nobody distinguished between meat and milk cows," says Joanne Passmore, a former University of Delaware assistant extension agricultural editor who is now writing a book on agriculture in Delaware. "They just milked the cows until the milk stopped and then began fattening them up for meat."

Since there was no refrigeration or transportation in those days, a dairy business would have been a complete impracticality. Most people put their cows out to open range until late fall when all but a few were killed and salted down for winter beef. They could only afford to feed a couple of cows through the winter.

Delaware dairy cows have come a long way from the large-boned rugged cattle the Swedes brought with them when they started their new lives in America back in 1638. As the different nationalities settled in the New World, each brought their own cattle with them. In addition to the hulking Swedish cows, there were large, yellow-colored Danish cattle and colorful "variegated" Dutch cows.

"When all these breeds began mixing together, you can imagine what a conglomeration we had," says Passmore, who also helps her husband run their dairy farm near Taylor's Bridge.

It wasn't long, however, before people realized the advantages of breeding cattle to perpetuate desireable traits. When the industry arrived at "neat" or blooded cattle in America, according to Passmore, cattle owners began importing animals with certain qualities.

Even before the Civil War, Durham Shorthorn cattle were brought here from England and another popular breed was the Devon – a strong but rather gaunt, reddish cow. Beginning to differentiate between meat and milk cows at this time, farmers imported Holsteins and Aldernay cattle (Jerseys and Guernseys) strictly for milking purposes.

"The dairy industry really started when the railroads came through during the mid-1800's," says Passmore "The farmers now had a way

(Turn to Page 94)

The dairy cow as we know her today was unheard of less than 100 years ago. Man has made her what she is through specific breeding and feeding programs.

National Holstein Convention begins June 27

BRATTLEBORO, Vt. – More than 1500 Holstein dairy farmers are expected to converge in Louisville, Ky., the heart of the great bluegrass country, for the 93rd annual convention of the Holstein-Friesian Association of America June 27-30.

The Galt House, will serve as convention headquarters and site of the annual meeting. Host for the four day convention is the Kentucky Holstein Cattle Club. John Kalmey, Shelbyville, Ky. is the general chairman of the convention.

Convention business sessions will convene at 10 a.m. on Wednesday, June 28 and includes an open forum for the discussion of association activities and policies by all members. The business meeting will continue through Thursday. Convention delegates will act on the bylaw amendment proposals and elect officers for the coming year, as well as four directors to serve four year terms.

The Ad Hoc Committee on convention nominating procedures, authorized by the 92nd convention delegates, is proposing a bylaw amendment which establishes a seven member committee, appointed by the president, that will nominate one or more persons for each of the offices of president, vice president and directors.

Another major bylaw amendment proposal, made on behalf of the board of directors, concerns HFA's reregistration of Holsteins registered in the herbooks of other countries.

Reflecting the increased importance of Holsteins internationally, this year's annual meeting will include the presentation of the "Joint Effort Award" to The People's Republic of Hungary. The "Joint Effort Award" recognizes the relationship between Hungary and the U.S. as a "model of cooperation in the establishment and development of Holsteins worldwide." HFA Executive Chairman Robert Rumler will present the award to Jeno Vancsa, vice minister of agriculture for livestock, and Hungarian Agriculture Attache Jozef Nemeth on Thursday afternoon, June 29.

Tuesday, the day preceding the annual meeting, has been designated host day. Convention-goers will be taking a bus tour of bluegrass country that includes a stop at a horse farm in Bourbon County. All groups will visit either Clayborne Farm, Golden Chance Farm or Stoner Creek Stud Farm. "Each operation will be explained in detail," reports John Kalmey, convention chairman. The bus tour will also include visits to the Keeneland Race Track, The Kane Ridge Meeting House Shrine where the First Christian Church was founded, a winery, and the recently completed Horse Farm Park, where the U.S. equistrian team will defend its world title in a three day event.

The finale of the week's activities will be the '78 convention sale, managed by Alvin R. Piper and Associates, International Holstein Sales and Service, Lake Mills, Wis. It will begin at 10 a.m. on Friday at the Kentucky Fair and Exposition Center. Piper reports that 97 of the nation's finest Holsteins have been consigned to this year's sale.

Six young Holstein breeders have been selected winners of the National Distinguished Junior Member Contest, conducted by the Holstein-Friesian Association of America. They are: Pennie Smith, Monkton, Md.; Steven Vaughan, Hartville, Ohio; Johana Merrill, Silver Springs, N.Y.; Alan Nower, Hamilton, N.Y.; Jeff Gibson, Paris, Ky.; and Janice Muther, Salinas, Calif.

These six distinguished junior members will receive an expense-paid trip to HFA's national convention, June 27-30, in Louisville, Ky., and will be given special recognition and awards during the association's annual meeting.

More than 10,000 young people are junior members of HFA. Contest entries were received from 27 states.

Milk components and estate planning will be the featured discussion topics for the "early-bird sessions," which begin at 8:30 a.m. on both Wednesday and Thursday, and will precede the convention business meeting. On Wednesday morning, HFA Vice-President Ivan Strickler, Iola, Kans., will chair a panel discussion entitled "The Bottom Line For Breeders On Milk Components". Darrell Gaugh, Boulder, Colo., chartered life underwriter and president of the National Estate Planning Institute, Inc., will explain a practical approach to estate planning for Holstein breeders on Thursday morning.

Designed to update Holstein breeders on the issues concerning milk components, Wednesday morning's informational session includes three capsule presentations. Elmer Paper, chairman of the component pricing committee for the National Milk Producers Federation (NMPF), Stockton, Iowa, will review a discussion paper that was recently developed by the NMPF on a proposed method of component milk pricing. This paper has been distributed to NMPF members and is presently receiving considerable discussion nationwide. Donald Voelker, extension dairyman at Iowa State University, will explain the factors involved when considering nutrient components in a breeding program. Ivan Strickler will wrap up this informational session with a review the established policies and principles of the Holstein Association on pricing milk to the producer.

Darrell Baugh, Boulder, Colorado, extends a special invitation for all the wives to accompany their husbands to Thursday morning's "early bird session". Recognizing the deep involvement of farm wives in the business, Baugh believes they should also be involved in the decision-making

DAIRY MONTH SPECIAL ON RED BARN COW MATS

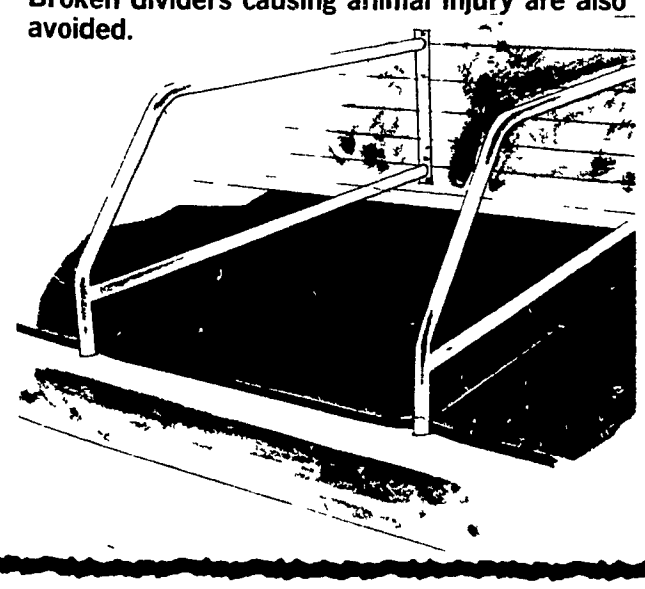
BUY 9 OF ANY SIZE MAT AND GET ONE FREE

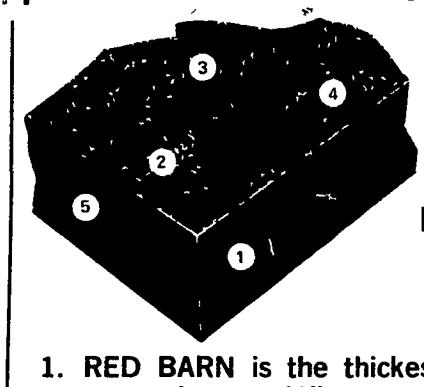
Why and How RED BARN Rubber Mats can reduce costs, cut injuries.

RED BARN floors are 100% vulcanized rubber. They were first manufactured and installed in 1968, and have proven their worth to dairymen ever since. Whether these mats are used in free stalls or stanchion barns, their non-slip qualities provide both comfort and safety for your herd. Dairymen everywhere report bedding cost reductions of 80% and more, and a dramatic decrease in clean-up time. Slips and falls that result in swollen hocks and stepped-on teats are all but eliminated.

LABOUR COSTS CUT DRAMATICALLY

RED BARN rubber flooring cuts free stall cleaning time to a minimum. One dairyman with 165 stalls averages only 15 minutes per day to keep ALL stalls clean (testimonial on request). Because RED BARN mats are tough, depressions cannot develop that require filling, as is often the case with other types of flooring. Broken dividers causing animal injury are also avoided.





NOTE THESE SPECIAL QUALITIES

1. RED BARN is the thickest mat there is, measuring over ¾".
2. Surface has a grained, pebbled texture for easy cleaning and non-slip qualities.
3. Surface is resilient for comfort, yet springs back to original form.
4. TOUGH. Each mat contains over 100 pounds of vulcanized rubber. NO WIRE, METAL OR CLOTH BONDING MATERIALS ARE USED.
5. RED BARN is non-absorbent.

RED BARN Soft, Tough Mats Save Costs & Protect Animals.

VANCO SALES CO.
Phone 717-776-3494
Ask For Van Hocker

RED BARN rubber mats come in four standard sizes and will fit virtually any floor installation No adhesives are required the corners of each mat are fastened with cement nails or Ram-Set pins and washers The 100 pound weight of each mat does the rest Mats are easily cut and fitted — the only tools needed are a piece of chalk, a square and a utility knife To assure dry floors and good drainage, a slope of about 3 inches per 7½ feet is recommended

DETAILED INSTRUCTIONS FOR BOTH FREE STALL and STANCHION BARN INSTALLATIONS are AVAILABLE on REQUEST.

The dairy cow

(Continued from Page 92)

to get their products to the people."

Before calories and cholesterol became dirty words, tastes in dairy products were decidedly different. According to Passmore, every Delaware town of any size had a creamery. There, farmers would take their milk to be skimmed and made into butter. The skimmed portion – considered an undesirable tasteless liquid – was fed to the hogs and chickens.

Sweet creamery butter has not always been standard fare at the dairy counter, either. Because of the lack of refrigeration, they made butter from "ripened" cream which had a most distinctive flavor, to be sure. When a Newark dairyman finally introduced sweet butter (made from fresh cream) in 1906, most people rejected it as too bland.

"Pasteurization and refrigeration were developed at the turn of the century, just when Delaware needed a new agricultural industry," says Passmore. "They'd already been through the wheat industry in the early 1800's, peaches in the mid-1800's and cannery produce in the late 1800's.

Farmers who had made their fortunes in cannery produce left their rural residences to move to the city and let tenant farmers run their farms. It was because of these tenant farmers that the Delaware dairy industry grew up in the Kenton-Dover-Middletown area. As part of the arrangement, the tenant farmers agreed to share half of the crops with the landlord. Thus, the only way these farmers could get ahead financially was by keeping their own dairy cows and selling the milk.

By the 1920's there were not only creameries, but ice cream and cheesemaking plants scattered throughout the state. Income from dairy products comprised a substantial portion of Delaware's total farm income.

"But the milk market began to decline after World War II when farmers realized they could make more money growing improved crops than dairying," says Passmore. "In addition, sanitary regulations were beginning to be strictly enforced and many farmers couldn't make the improvements necessary to stay in business because either it wasn't their land or they couldn't afford them."

Then in the 1950's the small businessman in every field discovered that his functions were being usurped by large, national companies. The Milk Marketing Order went into effect and many dairies found it easier to keep the records it required by buying a larger quantity from a few farmers than dealing with many small ones.

The small dairy farmer is now only a memory in Delaware. However, as cow numbers have declined through the years, per cow production has increased even more rapidly so that more than twice the amount of milk is produced than when the Delaware dairy industry boasted twice as many cows.

Mrs. Passmore's book **Three Centuries of Delaware Agriculture** is a joint project of the Delaware Grange and the Bicentennial Commission. It will be available through the grange at the first of the year.

June is dairy month

Ice cream grading project melts

WASHINGTON, D.C. – The U.S. Department of Agriculture is dropping plans for ice cream grades because of public response to the proposal.

Acting Secretary of Agriculture Carol Tucker Foreman said although many persons who commented favored grades, they thought the grades would tell them what ingredients were used in ice cream. The ingredient information will be provided by a Food and Drug Administration labeling regulation which will go into effect July 1, 1979.

The proposed quality grading system for ice cream developed by USDA's Food and Safety and Quality Service (FSQS) would have been based on the flavor, body and texture and color of ice cream to help customers identify the various quality levels of ice cream found in retail stores.

Ms. Foreman said FSQS would continue to develop consumer grades for food products where they can help customers make buying decisions and that the department would continue to ask for public input in the development of grades and standards.

"This is why we ask for public comment on our draft proposal," Ms. Foreman said. "We want to know before we develop grade standards whether they are going to be of use to the public. In addition, it has become increasingly apparent that consumers may want grades to reflect information in addition to or other than taste, color and such factors. Some comments on the ice cream grade proposal reflected a desire to have them reflect nutritional value or other qualities. We do not know whether this can best be accomplished by the grading system or by improved nutritional labeling. Our joint labeling hearing this summer with FDA and the Federal Trade Commission should provide additional answers."

The proposed ice cream grades were outlined in a study draft issued Feb. 21 and comments were invited by April 15. The study draft evolved from USDA's request for public comments on the feasibility of setting up a grading system for ice cream in October 1977.

FSQS received 464 comments on the draft proposal for ice cream grades. Of this total, 195 were opposed, and 41 expressed no opinion FSQS establishes grade standards and provides grading service on request and for a fee. The USDA grade may be used on foods that have been officially grades.

More milk used

Last year Americans' per captia consumption of all dairy products was 522 pounds - a slight increase over 1976. U.S. milk production reached 123 billion pounds in 1977 - that's enough if lined end to end in gallon cartons to go to the moon and back four and one-half times. Cash receipts from dairying last year were $11.8 billion – a record high.

A beefy response to your long-term needs

The new 4440 is indeed a powerful performer But just as important it has the strength to back up that power in the field From stem to stern it s beefier than its predecessor There s a bigger-displacement engine new engine cooling system bigger transmission/hydraulic oil cooling system new 4-pinion differential wider final drives and bigger drive axles These are just a few of the points we d like to cover when you stop by the store and ask for more information on the new 4440

Dairy industry smiling over cheese purchases

SOUTHAMPTON – Per capita cheese, consumption in the U.S. increased 93 per cent from 1960-1976, a performance unmatched by any other staple food in the country. And, in 1976 it jumped to a record 16.0 pounds per person, for the biggest annual increase in 31 years! So says Dairy Council Inc., headquartered here.

American cheese, led by Cheddar and including Colby and Monterey Jack, accounted for 92. of these 16.0 pounds. Americans ate almost a pound more per capita over 1975 from this cheese group. And Cheddar remains, by far, the most popular cheese in the country, with its popularity continuing to grow. Total 1976 U.S. cheese consumption was up to almost 3.4 billion pounds, or nearly 400 million pounds more than in 1975. Cheddar's proportion of this was 44 per cent.

Other cheeses showing per capita consumption gains in 1976 included Mozzarella, Swiss, Provolone and Parmesan. The additional cheese that Americans ate in 1976 was virtually all in natural forms, as opposed to processed cheese/cheese foods and spreads.

Cheese Production Sales

Matching the 1976 record cheese consumption was an all-time high total U.S. cheese production of 3,337 million pounds. This is 14 per cent more than the previous 1974 record output of 2,937 million pounds and 19 per cent more than was registered in 1975.

All cheese types showed production increases in 1976. The American variety was up 25 per cent over 1975 and largely accounted for the total U.S. cheese production increase with 62 per cent of the nation's cheese output. Cheddar led the way be recording the largest cheese production gain in this group. It jumped to 1,606 million pounds, a 33.3 per cent increase over 1975. Italian-type cheeses accounted for another 22 per cent of the total production, Swiss 6 per cent and all others, 10 per cent.

Mozzarella registered the biggest Italian gain to 506 million pounds, a 10.6 per cent increase over 1975.

Sales of American cheese exceeded 1.9 billion pounds, 12 per cent more than in 1975. The other cheeses averaged a 10 per cent sales growth.

Several factors are contributing to the cheese explosion in America:

•Increases in family incomes, leading to increased cheese sales/consumption.

•Greater interest in ethnic cooking, such as Italian/Mexican cuisine, where cheese is a major ingredient.

•Trend toward away-from-home eating and corresponding growth in fast-food outlets, which use cheese in many dishes (e.g., pizza, cheeseburgers, and tacos).

•Fewer full meals being eaten. Cheese, as a "now" food that's instantly ready to use, suits today's new eating habits where people are eating fewer full meals and doing more snacking and "grabbing a quick bite."

•Increased awareness of cheese's nutritional value. Since cheese is an animal source protein, it rates with meat, fish, and fowl as a complete or first-class protein. That means it has all the essential amino acids needed by people to meet their daily protein requirements. It's also high in food energy and a good source of calcium, phosphorus and vitamin A.

People are gaingin a greater knowledge of the diversity of cheese types and their uses. This is due in large part to increased promotional efforts by cheese/food companies.

In-store merchandising efforts have increased, as reflected by larger cheese sections. Where cheese retailers had only 40 different cheeses from which to choose 50 years ago, today some are showing as many as 200 of the different kinds available, and they're using more dynamic cheese displays.

Dan Carter, a past National Cheese Seminar president, said in 1976:

"We (in the cheese industry) are in a growth industry that has a potential to double again in the next 20 years. There is no other food industry as exciting in volume growth and profit as cheese. It remains one of the fastest growing consumable foods in the U S. today and continues to grow in profitability.

N.J. is tuberculosis free

NEW YORK, N.Y. – A certificate recognizing New Jersey as the 14th state officially accredited free of tuberculosis in cattle was presented to state officials recently by Dr. F. J. Mulhern, administrator of the U.S. Department of Agriculture's (USDA) Animal and Plant Health Inspection Service (APHIS).

The certificate was presented to Phillip Alampi, New Jersey secretary of agriculture, in the auditorium of the State Office Building, Trenton, N.J.

The following states previously have qualified as accredited free of tuberculosis: Connecticut, Colorado, Maine, Maryland, Minnesota, Montana, New Hampshire, New Mexico, North Carolina, North Dakota, Rhode Island, Utah, and Wyoming.

Heavy milk flow noted in Order 2

NEW YORK, N.Y. – The volume of milk pooled under Order No. 2 during 1977 rose for the second year in a row. The increase of 144.7 million pounds over 1976's total nearly tripled the 1975-76 increase.

Although annual producer receipts of 9,628.9 million pounds were above last year's total, monthly production did not follow the same pattern throughout the year: Pool receipts were lower for the first five months of the year compared to 1976 and higher thereafter. Since August, production each month reached the highest level since 1971.

Producer receipts were at their peak in May with 916.3 million pounds and at their low in February when 710.5 million pounds were pooled. The margin between the high and low months, 205.8 million pounds, was the lowest since the seasonal incentive plan was adopted in 1967.

More than 97 per cent of the milk pooled each month in 1977 was delivered on bulk tank units. For December, the figure rose to 98.6 per cent. On an annual basis, bulk milk aggregated 9,423.1 million pounds or 97.9 per cent of total pool receipts.

According to Order 2 Market Administrator Thomas Wilson, the increased pool receipts were the result of continued producer efficiency as indicated in statistics on the daily deliveries per producer.

With fewer producers in the pool, each one delivered an average of 1,402 pounds per day, a 4.5 per cent increase over last year. Bulk tank producers increased their daily output by 51 pounds and can producers had an average increase of 16 pounds.

Daily deliveries per producer were higher each month during 1977 than the corresponding month in 1976. However, the increases ranged from six pounds in March to 123 pounds in December.

A record high under the Orders was attained in June this year when daily deliveries per producer reached 1,572 pounds. The 1977 low of 1,291 pounds occurred during the first month of the year.

Producer receipts from New York totaled 6,970.0 million pounds an increase of 16.9 million pounds over a year ago.

New Jersey declined in amount and realtive importance in 1977, supplying 21.7 million pounds and 0.3 percentage points less than the previous year.

Pennsylvania, the third major state in the milkshed, increased its Order No. 2 production last year by 148.7 million pounds to a total of 2,357.4 million pounds. More significant was its proportionate share of the pool, 24.5 per cent versus 23.3 per cent in 1976.

Milk from other states still constituted less than one-half of one per cent of Order No. 2 producer receipts However, the amount supplied from such sources in 1977 was 4.3 million pounds, more than one-fifth above last year's total.

Class I milk $12.03 in July for Order 4

ALEXANDRIA, Va. – Middle Atlantic Order Market Administrator Joseph D. Shine this week announced a Class I milk price of $12.03 per hundredweight for July 1978. Shine said that the price is up one cent from June and is 63 cents higher than the July 1977 price. Order No. 4 prices are announced for milk testing 3.5 per cent butterfat, f.o.b. (free on board) plants located within 55 miles of Philadelphia, and also within 75 miles from the nearer of Washington, D.C. or Baltimore, Md. There is also a six-cent direct-delivery differential applicable to producer milk received at plants located within 55 miles of Philadelphia.

Shine announced a Class II milk price of $9.15 per hundredweight for May 1978 and a butterfat differential of 12.3 cents. The Class II price is down two cents from the previous month.

These class prices are based on the May 1978 Minnesota-Wisconsin manufacturing milk price of $9.25 per hundredweight adjusted to a 3.5 per cent butterfat content.

The USDA reported that the wholesale price of Grade A butter at Chicago for May was $1.0671 per pound and the nonfat dry milk price was $.7071 per pound f.o.b. plants in the Chicago area.

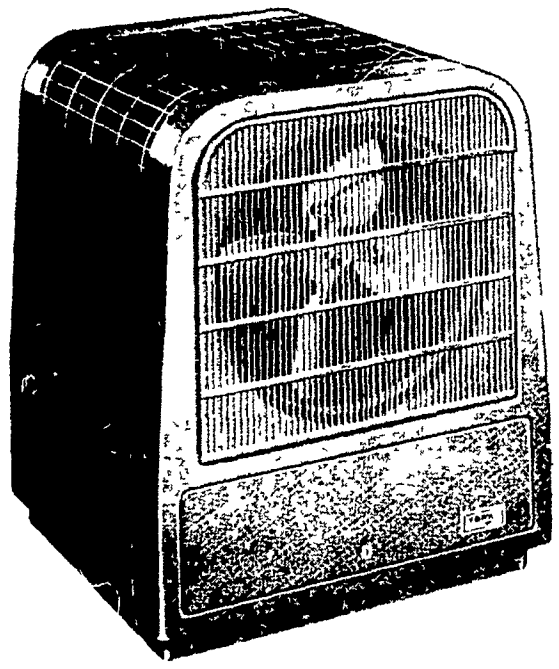
AIR CONDITIONING
YORK CHAMPION IV



THE YORK CHAMPION IV Total Engineering Concept

You expect the air conditioner you buy to cool and dehumidify your entire home In addition you may be looking for a quiet unit and one that will operate efficiently Certainly you want a system that is easy to maintain or service and one that is built to last Here s how the York Champion IV unit was designed to meet these four basic requirements

I. QUIET OPERATION

The Champion IV unit uses twin fans for low velocity extremely quiet air flow through the unit In fact air flow is so gentle it will not harm vegetation located as close as 12 inches from the coil The compressor is positioned below the twin fans to help disperse its operating sound

The Champion IV unit is engineered to give you as quiet a unit as possible without affecting the other benefits Visit your York dealer and listen for yourself

II. CONSERVE ENERGY

In terms of energy savings the Champion IV unit has been engineered to give you optimum efficiency without sacrificing quiet operation serviceability or durability

Because the York condenser coil uses more fin surface with fewer tubes a large refrigerant charge is not needed eliminating the need to provide heat to the compressor The Champion IV unit does not consume power when it s off as do conventional units with constantly operating crankcase heaters

There are reasons to believe in magic cows

By DEBBIE CLAYTON
Asst. Agricultural Editor
University of Dela.

NEWARK, Del. – Do you remember "brown cows?" You made them by adding ice cream to your favorite cola drink. Some people called them black cows but in either case they made a tasty beverage.

Today a drink similar in nature being promoted by the American Dairy Association is called a "magic cow." More than just the updating of an image, this renaming of an old standby makes a comment about the dairy industry as a whole...you may not have noticed but cows have gone from ordinary to magical in just a short half century.

Consider that there are now less than half the number of dairy cows in Delaware than there were 50 years ago–when the dairy industry reached its zenith in the First State. Then consider that these cows produce more than twice the amount of milk that their grandmothers produced.. that's equivalent to a quadruple in production or a 300 per cent increase per cow.

Now do you believe in magic cows?

The reason for the dramatic increases in milk production in the past 50 years is of course due not to witchcraft or sorcery but to the scientific wizardry of the Atomic age: improvements in animals nutrition and health, the development of antibiotics and the growing is enough to give even the staunchest nonbeliever a little faith in the national Agricultural Experiment Station system--through which most of these improvements were developed.

But the cow is not the only component of the dairy farm that has been magically transformed by progress. The dairyman of today is a better manager of labor, capital, time, animals and, ultimately, himself. Consequently, there aren't as many of them around anymore either.

Many of the Delaware dairymen who have perservered through the changes in the industry are located in Kent County. According to Kent County Extension agent Dave Woodward, a former dairyman himself, this is due largely to historical reasons but also because this county is a good halfway point between rural Sussex County, which has a smaller market for the milk, and urban New Castle County, which has fewer farms.

"I still get plenty of phone calls from people wanting to get into the dairy business," says Woodward. "But anyone who gets into the business without prior experience is only fooling himself. And then again, it's an occupation that is so confining that you're more-or-less married to it."

Not only does he farmer's lifestyle have to be tightly meshed with his occupation in dairying, but getting into the business involves a higher initial investment than other types of farming. Added to the land and equipment costs of regular farming are the costs of the animals and milking equipment. "With dairying," says Woodward, "there's more of an investment which doesn't increase your net worth...but there's also more of a cash flow all of the time once you've established yourself."

Funding sought for groundwater studies

HARRISBURG -- A resolution seeking high priority funding for detailed groundwater studies will be prepared by the Department of Environmental Resources' Water Resources Policy Advisory Committee for presentation to the General Assembly.

At its June 1 meeting the Committee selected a group of its members to draft the resolution and present it at the Agust 3 meeting for approval.

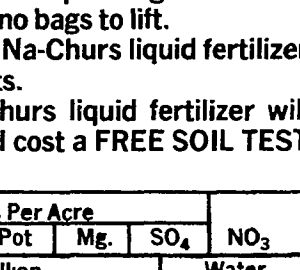
Committee members said there is a pressing need for detailed groundwater management data and plans and noted that the Department of Environmental Resources has been unable to do such work to date for lack of sufficient budget appropriations.

The Committee spent much of the June 1 meeting considering issues involved in water supply and allocation and what steps should be taken to prepare for another major drought.

After much discussion, it was generally agreed that the Commonwealth needs to consider a law covering water allocation and withdrawal which would look at both surface and ground water and would have applicability throughout the state rather than in just the two areas – Delaware River and Monongahela River – where the most pressing problems now exist.

At its August 3 meeting the committee is expected to continue this discussion and develop in more detail a recommendation for this new legislation which could then be forwarded to the General Assembly.

Committee members also will vote on leadership for the group at the August 3 meeting, choosing from among candidates who represent the Pennsylvania Bar Association, Council of Farm Organizations and League of Women Voters.



MORE THAN A FAN

Jamesway All-Season ventilation systems help increase production by controlling condensation, odors, and drafts in your livestock buildings. Air recirculates evenly through distribution tubes.

We also install silage distributing-unloading, feeding, and manure-handling systems.

SALES REPRESENTATIVES NEEDED

The remarkable difference between conventionally and intensively managed fields is illustrated here by the height and thickness of the stands. The same varieties were used in both cases. Checking the specific results were, left to right, Becky Raschke, student teacher of vocational agriculture at Garden Spot High School; Homer Martin, territory manager of Stanford Seed Co.; and Donald Robinson, agriculture teacher at Garden Spot. Not shown, but also present for the clover management study were Paul Eby, of the P.L. Rohrer Company, Smoketown; and Robert Anderson, adult instructor for agriculture at the Hinkletown Alternative School.

Intensive management gets farmer into clover

By DIETER KRIEG

HINKLETOWN -- Intensive management of clover fields can bring pleasantly surprising results to the farmer, according to a research project conducted by the vocational agriculture department of the Eastern Lancaster County School District.

Although similar findings have been recorded all over the country - including the Penn State Field Research Laboratory near Landisville - the plot near here offers some of the most dramatic proof on the subject.

Donald Robinson, advisor for the adult agricultural education program, noted that one of the keys to good clover management is to have the crop mowed before it reaches full bloom. If that does not occur, then the crop will not come back the following year. Although clover is a biannual, research by Penn State University and other institutions has shown that a properly managed clover stand can be productive and profitable for as long as five years. Penn State's Dr. John Baylor, one of the leading authorities on forage crops and hay, has been lecturing for years that clover can do much better if it wouldn't be so neglected.

The Eastern Lancaster County School District's purpose for the research at the Hinkletown plot is to provide farmers with an opportunity to see for themselves what clover can do if it's managed properly. Seeded in the Spring of 1977, and cut for the first time last Fall, the plots came back this year with yields surpassing two tons per acre.

Robinson, who is assisted in his programs by Robert Anderson, noted that during the first harvest last Fall, the three planted clover varieties gave the following yields:

Pennscott – 0.94 tons per acre; Flory – 1.54 tons per acre; and Redland – 1.14 tons per acre. All of these yields were the result of intensive management procedures. Yield checks for conventionally managed fields were not taken, explains Robinson, due to interference by weeds and rain. He also noted that mildew was a problem last year when the crop was established.

Last week, when the first cutting was made for 1978, only the intensively managed plots were worth mowing. Portions of the field which had been treated conventionally had all but died away. The explanation is that the crop was mowed too late last Fall (when it was in full bloom) and weeds had taken over.

First cutting yields this year were as follows: Pennscott – 1.16 tons per acre; Florie – 1.46 tons, and Redland – 2.04 tons.

Even before the clover was cut last week, and yield checks were taken, Robinson and others noted that Redland had survived the Winter much better than the other varieties. Also, in the conventionally managed plots, it had withstood full bloom much better than the others.

Robinson recommends that clover be cut at the late bud or early bloom stage. Fertilization and weed control are also important.

In the case of his test plots, the clover was sowed in mid-April of 1977 The seedbeds were conventionally prepared and Eptam was sprayed on before seeding "It controlled weeds very nicely," Robinson observed A hundred pounds of 0-15-30 fertilizer were used to nourish the plants. This Spring, the field was sprayed with Butyrac for continued weed control, and a topdressing of 100 pounds 10-10-30 to the acre was applied. A second topdressing will follow the final cutting this Fall.

"A farmer should be able to expect to maintain improved varieties of clover for at least three years," Robinson explained, adding that it could even be four years and that stands at the Landisville research facility have stood for as long as five years.

"The key", Robinson repeated, "is to not allow the clover to reach full bloom."

The late bud to early bloom stage is when properly managed clover should be cut for harvest.

AVCO NEW IDEA FARM EQUIPMENT

MODEL 769 UNI FLAIL-MATE

EXCLUSIVE NEW MACHINE

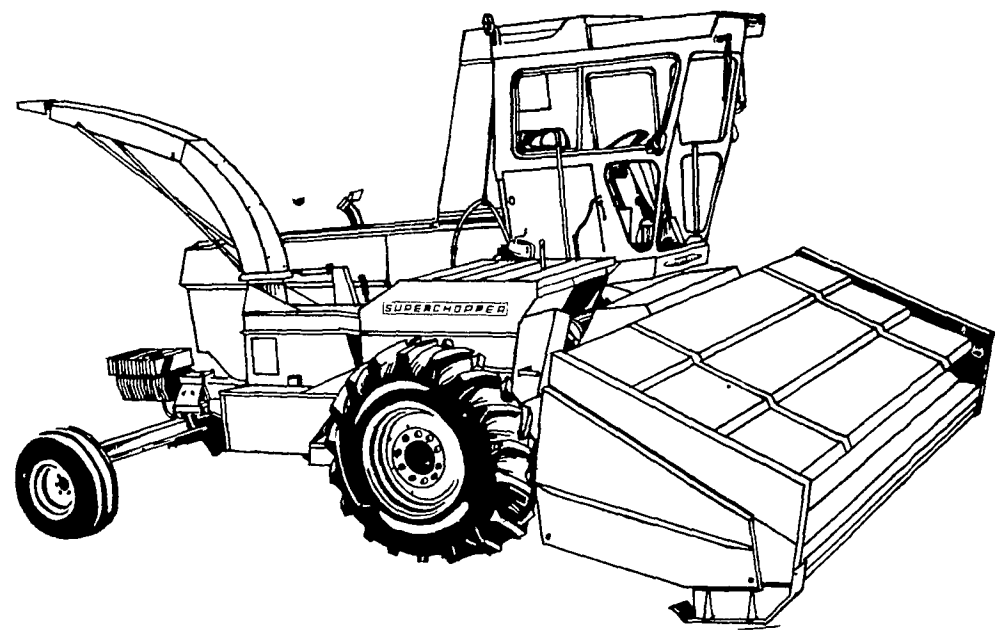
Expands your Uni-Forage Harvester versatility.

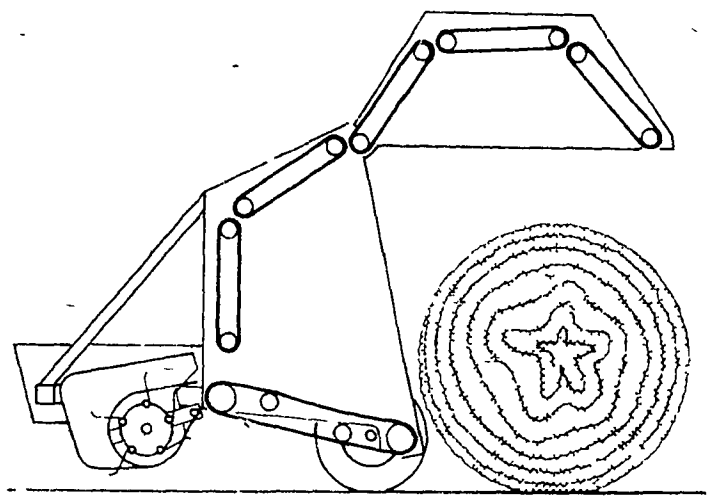
MULTI USE — MULTI CROP

It's a Cut/Ditioner, Windrow Pickup, Direct Cut Head.

The new Model 769 Uni Flail-Mate is the industry's first forage harvester attachment capable of performing as a Cut/Ditioner, windrow pickup and direct cut head with changeover in less than five minutes. It has a 12-foot cutting width for big capacity, reduced harvesting time of hay and crop residues and minimum soil compaction.

FLAIL-MATE . . . one more reason why Uni-System just plain makes more sense.





THE BALE KING

Look for the star. It's your way of knowing the bale hasn't been tightly wound, squeezed and compacted all the way from the center out. The Avco New Idea Bale King gives you the star in the center that tells you the hay is still soft. The bale is compacted from the outside inward to give a hard wrap for extra protection against the weather as well as shape retention in storage.

Look for positive, easy start. The open chamber design and positive-start pickup feeds hay, straw, or cornstalks right into the chamber. You can stay right in your tractor seat for easy, safe operation from start to finish.

Yogurt becoming increasingly popular in U.S.

ROSEMONT, Ill. – Yogurt sales have increased phenomenally during the last 10 years. A $27 million business in 1967, yogurt netted more than $400 million by 1977 when per capita consumption reached 2.5 pounds.

Available in many varieties, sweeter yogurt, fruit-flavored, sundae-style and frozen yogurts have all contributed to the popularity of this age-old product. Because yogurt is more of a natural food than many others is probably another reason. The convenience offered by carrying and spooning yogurt out of a carton may also be responsible for the current interest in this versatile dairy product.

A spring 1977 survey of 4,000 consumers by the marketing and economic research division of United Dairy Industry Association shows that, overall, more and more Americans are developing a taste for yogurt; consumption doubled between 1972 and 1977.

Survey results indicate more women eat yogurt than men, with women ages 17 to 19 the most avid consumers; consumption is growing fastest among teenagers. Yogurt is most popular in the Pacific area of the U.S., followed closely by New England; the West Central area, where consumption is the lowest, is just starting to discover the tangy dairy food.

Health watching, too, is considered a good reason for yogurts rise in consumption, with plain yogurt leading the way for many who are dieting. At nine calories a tablespoon for plain yogurt, one can eat a cupful without panic, or use one, two or three tablespoons on a salad with far less calories than a commercial dressing (65 per tablespoon) or mayonnaise (approximately 100 for a tablespoon).

Yogurt matches milk closely in value for calcium, protein and riboflavin. Thus, it can be used to replace at least one of the milk servings daily.

Yogurt was the primitive man's way of fermenting milk, originating in the Mid-East during Biblical times. Abraham is said to have used goat's milk while Genghis Khan used mare and yak's milk. Today's yogurt is made from cow's milk under rigid laboratory control.

Yogurt has undergone several revivals since it was discovered. During World War I it was made commercially in Spain. In 1929, a Spaniard opened a plant in Paris but it was not until 1950 that it surged to popularity in Europe. Although yogurt has been in the United States since the 1940's among the ethnic population, its current popularity started when fruit was added to yogurt and it was sweetened.

During the past year, frozen yogurt has given an immense boost to the overal picture. Small shops, countrywide, dealing exclusively in the frozen varieties have experienced immense success.

Although yogurt is often eaten as a snack and dessert, it also has extensive use as an ingredient. It is frequently used as a substitute for sour cream in stroganoff, as a topper for baked potatoes or whipped in a blender with cottage cheese and seasonings for a dip.

Yogurt contributes a tender crumb to such foods as pancakes, crepes or pound cake. It can be used as the liquid ingredient for a quiche, the sauce in a chicken casserole or chicken ala king or as an ingredient for a filling for a pie or torte. Frozen varieties have a great use in summer coolers.

A 16-page booklet on yogurt's uses, as well as tips for making it or freezing it, is just 25 cents for handling and mailing. One can order "The Wonderful World of Yogurt," United Dairy Industry Association, 6300 North River Road, Rosemont, Illionois 60018, by enclosing his full name and address with the coin

Park pools to open

HARRISBURG – State Park visitors were reminded recently by Secretary Maurice K. Goddard, Department of Environmental Resources, of swimming restrictions at beaches and pools brought about as a result of the reduced budget for the current fiscal year.

"Swimming facilities in 54 State Parks were open on the Memorial Day weekend," said Secretary Goddard, "but were closed from Tuesday, May 30, through Friday, June 2. The swimming facilities will reopen on June 10, and remain open for the season."

Goddard, who made the initial announcement to the news media concerning the reduced swimming days last April 3, and again on May 18, noted that this was only one of several steps taken to live with a $700,000 cut in the State Parks budget mandated by the General Assembly last December.

HOW UNIPEL® 10-10-30 puts new flexibility in fertilizer planning:

This UNIPEL fertilizer provides all of the Phosphorus and Potassium needed for a Spring plowdown application for soybeans. It's also an excellent fertilizer to boost forage yields of legume crops such as alfalfa.

If you use split-application fertility for corn . . . it provides all the P and K you'll need to team up with the Spring supplemental N of your choice.

The chemical combination of N and P in UNIPEL 10-10-30 enhances Phosphate uptake and increases the fertilizer's efficiency. ORTHO's unique "Phospho-Nitric" manufacturing process for UNIPELS produces its long-lasting form of Phosphate that resists fixation in acid soils and is readily available for plant use whether applied Spring or Fall.

UNIPEL 10-10-30 gives you lots of options for fertility programming. Let's discuss how we can fit it in yours.

Tearful dairy princess promises to do her best

By JOYCE BUPP
Staff Correspondent

TOWSON, Md. – With tears of happiness glistening on her cheeks, Jo Garber promised to "do her best" for the Baltimore-Harford County milk industry as the new Area 5 Dairy Princess.

The lovely brown-haired, dark-eyed young lady won her crown over a field of six contestants during pageant festivities held June 2 in the Towson Plaza Shopping Mall.

Reigning over the Baltimore-Harford County dairy industry for the coming year will be: (from bottom) Jo Garber, newly-crowned Area 5 dairy princess; Mary Foster, first runner-up; and Holly Amos, second runner-up.

Miss Garber, age 17, is the daughter of Mr. and Mrs. John P. Garber, Troyer Road, White Hall, formerly of Virginia. A junior at North Harford High School, she is preparing for college studies in the field of speech pathology or biological sciences.

High school activities of the new princess include the German club, yearbook staff, and serving as a class representative to the student government. Among her hobbies are swimming, bicycling and sewing, a talent she used in designing the blue quiana gown she wore for the pageant.

Jo has been a 4-H member for the past eight years and holds offices in both her local club and in the Harford County dairy club. Her project animals are three registered Holsteins, two cows and a calf, which she enjoys showing in area competition. One animal, her 4-year-old cow, was named an all-Virginia winner as an intermediate calf.

The Garber family milks 100 Holsteins and are members of Maryland Cooperative Milk Producers.

Mary Foster, daughter of Mr. and Mrs. Clyde A. Foster, Masemore Road, Parkton, was selected the first runner-up. She will be a sophomore at Lycoming College, majoring in art, Near East culture and archaeology.

Her busy college schedule includes membership on the women's field hockey team, officer of a social sorority which she helped to form, and serving as a reporter on the college newspaper.

Nineteen-year-old Mary has been active in 4-H for 10 years, participating in dairy exhibiting and judging. She owns nine Holsteins and seven Guernseys, and is employed on the family farm, which includes a milking herd of 115 Guernseys and Holsteins.

Peach marketing clinic set July 10

MORRESTOWN, N.J. – New Jersey's Peach Marketing Clinic, which has been held for several years for the benefit of producers, handlers and buyers in the Northeast, is scheduled for July 10.

The meeting will again be held at Mallard Inn in Moorestown, N.J. A dutch treat dinner is to start at 6:30 p.m., with the program scheduled to get underway at 7:30 p.m.

Dougals Zee, president of the New Jersey Peach Promotion Council, will preside at the meeting, which will be open to anyone who wishes to attend.

As in the past, the meeting is being put on by the Cooperative Extension Service of Rutgers University in cooperation with the New Jersey Peach Promotion Council and the New Jersey Department of Agriculture.

While the major program emphasis will be on the peach supply outlook for the Eastern section of the nation, there will also be a wrap-up on the national peach marketing situation, and comments concerning supplies of competitive fruits.

Five speakers will present the reports on the peach marketing situation and supply outlook. G. Ansel King of the Marketing Information Center at Clemson University will report on the Southeast. Ernest G. Christ of Rutgers will report on the New Jersey situation. Paul McPherson of Maple Lawn Farms, New Park, PA, will report on the Pennsylvania situation, and Tony Rubino of Blue Goose Growers, Hagerstown, MD, will report on the national peach situation. Malvin McGaha of the Fruit Division, Agricultural Marketing Service, USDA, will report on the supply situation for competitive fruits.

4-H dairy club holds meeting

READING – The Western Berks 4-H Dairy Club met at the home of Mark Wicks, on June 2, 1978, with 12 members present.

Business at the meeting included discussing first prize exhibit at Boscov's promotion. Slides were shown from the 4-H field day 1977.

The older members of the group showed the younger members how to trim hoofs.

The next meeting will be held at the home of John Stump on July 7.

4-H club meets

INTERCOURSE – On May 22, the Pequea Valley 4-H Cooking & Sewing Club met. The meeting was chaired by President Lisa King. The group then saw slides about 4-H activities, played some games and sang some songs.

The next meeting will be June 26, at the Pequea Valley Intermediate School's home economic room. This will be the club's first work meeting. It will start at 10:30 a.m.

Hunterdon Co. plans contest

FLEMINGTON, N.J. – A roast turkey dinner will precede the annual Hunterdon County dairy princess contest scheduled for June 13, reports Mrs. Marie Schwab, Ringoes, contest chairman. The affair will be held at the Ringoes Firehouse.

Details, entry forms, and tickets are available in the Hunterdon County Extension Service office.

Franklin Co. beef club holds meeting

GREENCASTLE — Twenty members of the Franklin County 4-H Baby Beef Club and their parents met recently at the Citizens National Bank, Greencastle.

A roller skating party was set for June 6 at Cold Springs Roller Rink, Waynesboro.

Roy Brenneman, Agway feed representative, discussed the proper feeding and ingredient proportions for steer feed.

The next meeting will be held June 15 at the Uppermen home.

11 million cows

The U S dairy herd totaled 11 million cows, or one dairy cow for every 20 people, in 1977 And, last year, these cows produced more than 123 billion pounds of milk - or 337 million pounds of milk per day

Two Pennsylvania youths to attend Shorthorn conference

VOLANT – Nadine Butler and Eric Peoples, Pennsylvania Shorthorn Association members, have been named delegates to the 11th Annual National Shorthorn Youth Conference, to be held in Kansas City, Mo. June 16-18.

Events during the three day meeting at the Mariott Hotel will include national committee meetings, workshops, business meetings, and various competitions including a speech contest, promotional contest, judging clinic and the national showmanship contest to be held at the Lazy D Shorthorn Ranch, Richard Dolginow, owner, at Excelsior Springs.

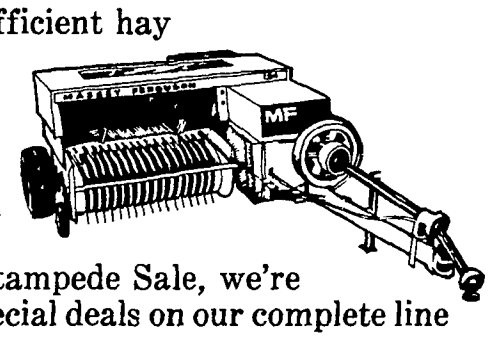
Highlights of the final morning session will be the election of new national directors and officers and the presentation of the Outstanding Club Award based on an accumulation of points earned by the states during the three day meeting.

Massey-Ferguson

Summer Stampede Sale!

Round Up Big Savings Now On Massey-Ferguson Balers

For fast, efficient hay harvesting, you can't top Massey-Ferguson balers. And during our Summer Stampede Sale, we're offering special deals on our complete line of MF balers.



Looking for a rectangular baler? Take your choice from the economical MF 120 to the big MF 128/130. Twine or wire tie models available.

If you prefer the easy-handling big round bales, now's the time to round-up great savings on MF's big round balers. Either the MF 560 (1,500-lb. bale) or the MF 450 (1,000-lb. bale) will be just right for you.

$600 Rebate on Tractors

But balers are just the beginning of our Summer Stampede specials. Purchase a 34 to 81 hp tractor, and Massey-Ferguson will give you a $600 cash rebate. And there are many other special values, too — but only during our MF Summer Stampede days.

Hurry! Summer Stampede Sale offer ends July 28, 1978. Limited to available inventory.

11 ag research projects approved

HARRISBURG – State agriculture secretary Kent Shelhamer has announced the approval of 11 agricultural research project totaling $239,744. The approval came from the nine-member agriculture research committee chaired by Shelhamer, with funding for the projects from a $400,000 allocation from horse and harness racing revenues.

Shelhamer said that the committee had approved six new projects totaling $155,594, and had approved, pending additional executive authorization, four more projects of $66,191. An additional continuing project was also approved at $17,959.

Shelhamer noted that earlier in the year the committee had approved 10 continuing research projects at a total cost of $220,256.

He explained that the four provisional projects would be funded if the governor gives his approval to spend the balance of revenues from previous years which remained in the research fund revenues.

The new projects had been discussed at the April 11 meeting of the committee and were approved on May 11 in Harrisburg. Shelhamer noted that these agricultural research projects become more valuable each year as new developments in agriculture become a way for farmers to meet the continually rising consumer demands for top quality products.

"We hope that these new agricultural research projects will yield maximum benefits for our farmers while minimizing taxpayers costs," Shelhamer noted.

He added that five projects went to Penn State, three to the University of Pennsylvania, one to the Catholic Archdiocese of Philadelphia, one to the Pennsylvania Food Processors Association and one to the Agriculture Department's Bureau of Plant Industry.

The new agricultural research projects approved by majority vote of the committee members are:

–Alleviating deer damage to Pennsylvania agriculture, a three-year project, Penn State, $27,314.

--Development of procedures for evaluation of soil conditioners and plant growth substances, a three-year project, Penn State, $30,000.

–A fruit rot control system for processing tomatoes, a three-year project, Penn State, $28,913.

–Optimizing production and production efficiency in dairy cattle by controlling rumen fermentation, a three-year project, University of Pennsylvania, $16,385.

–Natural mode of transmission of the bovine leukemia virus (BLV); development of a vaccine, a three-year project, University of Pennsylvania, $33,500.

–Distribution, impact and control of the dagger nematode and the viruses it transmits on apple, grape and stone fruit in Pennsylvania, a three-year project, Bureau of Plant Industry, Pennsylvania Department of Agriculture, $19,482.

The four new projects pending approval by the governor include:

–Aflatoxin in eggs – a potential human health hazard, a three-year study, Penn State, $20,000.

--Effects of selenium deficiency on sperm of stallions and bulls, a two-year project, University of Pennsylvania, $20,018.

--Pennsylvania direct marketing project, three years, Catholic Archdiocese of Philadelphia, $11,173.

–The effect of high temperature, short time processing on the quality of yield of canned mushrooms, two years, Strasburger and Siegel, Inc., $15,000.

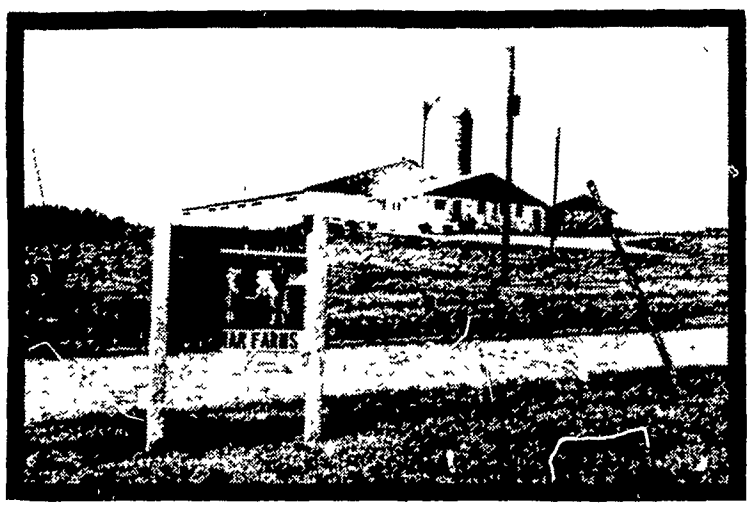
A study of alternatives to property taxation for financing Pennsylvania's public schools by Penn State was approved for $17,959 as a continuing project.

AGRI-KING
KEY TO PROFIT

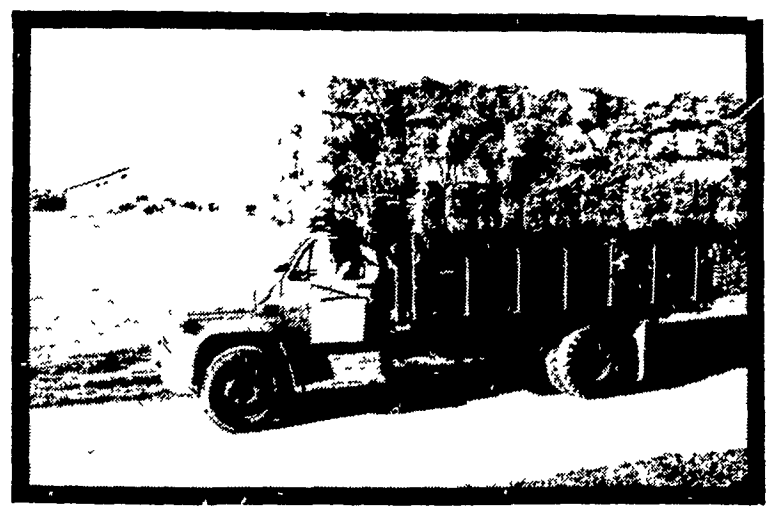
IT WORKS

Silo King On Baled Hay

Harold and Wayne Lesher of Way-Har Farms in Berks County tell of their experience in using **Silo King** on baled hay.



The Lesher Brothers Dairy Set-Up.



Harold on his way to auction with a load of their top quality hay.

"We feel that hay is the best cash crop (return per acre) a farmer can raise in this area today. We had 400 acres of hay last year and we baled over 26,000 bales plus filling our 20x50 silo twice with haylage. We baled very little rained on hay, but we did bale a lot that was not fit to bale because of weather conditions. By using **Silo King** we were able to bale the hay at a higher moisture level which helped us to beat the weather and save more nutrition."

"We feed over 200 head of dairy livestock and sell the remainder of the hay. Last year we sold over 200 tons, and to our surprise we found very little mold in any of the hay; and it also kept its color."

"We have used **Silo King** 5 our of the past 6 years. We became sold on **Silo King** after trying another preservative for one year. The **Silo King** works and it is easy to apply by using the Gandy Applicator on our baler."

Beekeeping meeting set

SCHUYKILL HAVEN – A beekeeping program sponsored by the Schuylkill County Cooperative Extension Service will be held on June 15 at the Penn State University Schuylkill campus. A movie entitled "Secret in the Hive" will be shown. Following the movie a discussion on forming a county beekeeper's association will be held.

The program will begin at 7:30 p.m. For further information contact Dale D. Moyer, Schuylkill County Cooperative Extension Service, 717-385-3431.

Milk has a lot

It's estimated that, during 1977, dairy foods contributed only 11.1 per cent of the total calories available in the U.S. food supply, yet they provided:

75 per cent of the calcium, 39 per cent of the riboflavin, 35 per cent of the phosphorus, 22 percent of the protein, 22 per cent of the magnesium, 20 per cent of the vitamin B-12, 13 per cent of the vitamin A value, 11 per cent of the vitamin B-6, 9 per cent of the thiamin (B-1), almost all the vitamin D intake and significant amounts of niacin equivalents.

Dairy princess contest was shopper stopper

By DIETER KRIEG

HARRISBURG – Dauphin County's dairy princess pageant, held here a week ago at the Harrisburg East Mall, was a real shopper stopper. Complete with milking contests and other dairy oriented entertainment, the event attracted hundreds of Friday evening shoppers.

The climaxing moment of the 2-hour program was the crowning of 19-year old Debra Cassel as the 1978 Dauphin County dairy princess. She is the daughter of Mr. and Mrs. John Cassel, Hummelstown R2, and a 1976 graduate of Lower Dauphin High School.

The new dairy princess may turn out to be the perfect representative for dairy farmers. When asked what she liked best about dairying, she quickly responded: "Drinking milk." She'll be wanting to convince thousands of school children that milk is Nature's most nearly perfect food and has already formed some strategies towards that end.

Runner-up in the contest, which was witnessed by hundreds of Dauphin Countians, was Kathy Feidt, 17, of Millersburg R1. Her parents are Mr. and Mrs. Eugene Feidt.

The pretty girls attracted considerable attention in their own right, but they by no means had an exclusive handle on the shopping crowds. A number of politicians participated in the cow milking contest and the crowds were delighted.

With WHP radio personality Ron Drake as master of ceremonies, all portions of the program received professional introductions and coverage People gathered around the display and contest areas two and three deep. For many, it was the first time they had ever seen a cow For others it was the first time they had personally seen one of their local politicians. Their interest and delight was self evident by the craning necks and sparkling eyes.

Tom Williams, Dauphin County dairyman, provided two Jerseys for milking contests. Mastering - or at least attempting to master - the teats of the gentle bovines were Harrisburg

(Turn to Page 121)

Dauphin County's new dairy princess, Debra Cassel, is flanked by her alternate, Kathy Feidt, left, and predecessor, Donna Capp.

4-H club lists plans

YORK – Liz Kohler, East Berlin R1, presented a demonstration "What Goes in a First-Aid Kit" at the meeting of the Thomasville 4-H Club on May 23 at the 4-H Center.

Members made plans for a trip to Hershey Park on July 31.

Jonathan Myers encouraged the members to participate in Five County Camp June 20 to 23 at Mt. Alto Campus.

Reports given included County Rural Life Sunday, Club Rural Life Sunday, Handicapped 4-H Club, 4-H Center Clean-up, County Council, and playground committee.

The next meeting of the club will be on June 27 at the 4-H Center.

Griest wins two pulls

THE BUCK – Harry Griest, a veteran tractor puller from Coatesville, won two pulling contest at The Buck Tractor Pulls last week. Driving his IH 1456, Griest drove to victory in the 9000 pound open class with a pull of 286 feet, seven inches. Les Houck of Kinzer and Dave Johnson of Deerfield, N.J. followed with pulls of 260-10 and 258-9, respectively. Both of their tractors were modified. Houck's rig was powered by two 427 Chevy engines, while Johnson had three 427 Fords in his machine.

Griest's second victory came in the 9000 pound super stock class, where a pull of 273-11 edged efforts by Marlin Brubaker of Quarryville and James Weaver of Staunton, Va. Brubaker drove an Allis-Chalmers D-21 for a distance of 257-9 and Weaver piloted a Ford 9600 for 241-9.

Two contests – 7000 pound modifieds and 7000 pound super stock – were rained out Results of the other classes were as follows:

12,000 pound super stock

1 Tom Middleton, Ridgely, MD. IH 1066, 282-6; 2 Amos Stauffer, Ephrata, Deutz 8006, 227-11; 3. Harry Griest, 86-6

5000 pound modified

1. Gary Mills, Fallston, Md, 427 Chevy, 239-2; 2. David Greek, Delta, 460 Ford, 230-8; 3. Curt Stoltz, Myerstown, 427 Chevy, 229-10.

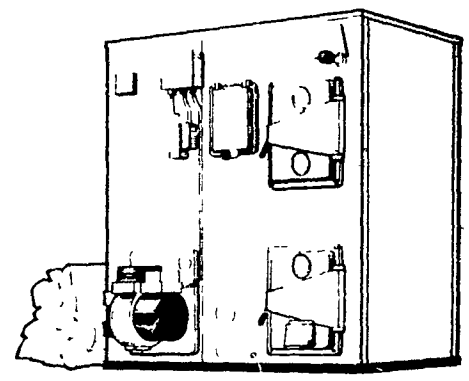
5000 pound super stock

1. Harold Stauffer, Ephrata, Deutz 8006, 261-10, 2 Jim Brubaker, Quarryville, AC 180, 251-1; 3 Dale Smoker, Cochranville, AC 180, 157-0

Two ways to reduce fuel costs.

The **HS Tarm Type OT** is a modern, efficient multi fuel boiler for central hot water heating systems It's a unit which allows you to use low-cost wood in addition to electricity and oil or gas as your source of heat When fueled with wood, it warms your home and provides plenty of hot tap water as well Should the wood fire go untended, automatic controls will switch to another fuel, and the boiler will continue to supply all your heating and hot water needs

The **Tasso A-3** is a cast iron wood burning boiler made to work in combination with existing oil- or gas-fired hot water heating systems to give you multi fuel economy Used with your present boiler, it allows you to heat your whole house with wood all the time, or merely supplement your present fuel by burning wood Like the HS boiler, the Tasso A 3 offers convenient operation if the wood fire dies out, your oil or gas burner will take over automatically



The HS-Tarm Type OT

Either the HS Tarm Type OT or the Tasso A 3 will give you reliable service while helping to protect you from fuel shortages and the high cost of commercial fuels Choose the boiler that's right for you!

Whelen to address Pa. poultry group

HARRISBURG -- Dr. Elizabeth Whelan, a nationally recognized authority on food and health, will address the 1978 Pennsylvania Poultry Conference on June 22 at the Host Farm in Lancaster.

Dr. Whelan is executive director of the American Council on Science and Health and a research associate in nutrition education at Harvard University.

Dr. Whelan's topic will be "The Panic Over Food Safety". She is the author of nine books, including **Preventing Cancer, Panic in the Pantry,** and **Food Facts, Fads, and Fallacies.** The latter two were written in corroboration with Frederick J. Stare, M.D., Ph.D., Professor of Nutrition at the Harvard School of Public Health. Dr. Stare was the founder of the department of nutrition and was its chairman for 35 years.

Dr. Whelan regularly contributes articles to professional magazines and popular publications. She is the moderator for "Healthline" and "To Your Health", syndicated radio programs heard daily in the United States. She earned degrees at Connecticut College (A.B.), Yale University School of Medicine (M.P.H.), Harvard University (M.S.) and Harvard University School of Public Health (Sc.D.).

The conference, which features separate broiler, egg, and turkey programs all day with the exception of Dr. Whelan and a price-outlook session for all conference participants, is open to everyone. This open invitation is also extended to the Pennsylvania Poultry Federation's (conference sponsor) annual banquet in the evening where the broiler, egg, and turkey industryman of the year are announced and entertainment is featured. For information write the Pennsylvania Poultry Federation, 500 N. Progress Ave., Harrisburg, Pas. 17109 or call (717) 652-7530.

Dr. Elizabeth Whelan, executive director of the American Council on Science and Health, will address the 1978 Pennsylvania Poultry Conference on June 22.

Milk marketing hearing set

HARRISBURG -- The public hearing for the Area No. 4 Milk Marketing Area, which was recessed May 31, 1978, will be reconvened at 10 A.M. on June 15, 1978, in Room 103, Agriculture Building, 2301 North Cameron Street, Harrisburg, Pennsylvania.

Public notice will be given via the news media of the above reconvened public hearing in accordance with the provisions of the Milk Marketing Law of April 28, 1937, P.L. 417, as amended.

Milk helps you sleep

Scientists at Tufts University in Alabama say they have identified a substance in milk that actually helps induce sleep. The element acts as a natural hypnotic by triggering an increase in the amount of serotonin in the brain, the natural chemical that brings on sleep. Researchers say a lack of the chemical can cause insomnia, buy that drinking milk may prompt the body to manufacture enough of the substance to start you on your way to dreamland.

WHERE QUALITY HAS BEEN FOR OVER 60 YEARS

Berwick Vegetable Cooperative celebrates 25th year

More efforts needed to preserve family farm

BERWICK – The cause of the family farm was championed here recently when State Representative William K. Klingaman of Tamaqua addressed the 25th anniversary meeting of the Berwick Vegetable Cooperative. It was held near here on May 20 at the Briar Heights Lodge.

A member of the House Agriculture Committee, the Schuylkill County legislator emphasized the need for programs which would help Pennsylvania farmers. He noted that a number of bills have been introduced and passed, but that there hasn't been enough impact to slow the trend of farmers going out of business.

Claiming that Pennsylvania agriculture is "deeply concerned with such a trend," Klingaman exclaimed "we tried to attack it with a 'Clean and Green' law, but its original intent got lost in the shuffle."

An estimated 150 members and guests of the BVC listened attentively as the House Ag Committee member explained why: "In order to get the law passed at all, even with its recognized deficiencies, we had to accept so many admendments from so many special interest pressure groups, that it got lose in the shuffle. I think it needs revision so that it truly reflects the original intent: the preservation of agricultural land for agricultural production of food and fibre."

Klingaman told of newer approaches to the ongoing problem of keeping farmland in production and farmers on the farm.

He said:

"Another idea had now been brought forth in House Bill 2145, which provides for 'agricultural districts'. It is very complex and intricate piece of legislation that didn't receive nearly enough consideration and discussion in the Agricultural Committee, which decided to hand it out and let people shoot at it. My own guess - and hope - is that it will be re-referred to committee for further study and amendment, which I think it surely needs. Its intent is to protect the farmer from eminent domain proceedings and "unreasonable local ordinances". Before I buy that bill, I want to know who is going to decide what is "reasonable". My personal philosophy is to hold to local control of our destiny. I believe that the local township supervisors know what is best for their neighbors than does some committee or bureaucrat sitting in Harrsiburg.

"Here is a case in point. The city of Allentown has a problem of disposing of its sewage sludge, and because of the concentration of heavy industry in the county, the sludge is very often alarmingly high in mineral content. So they're dumping it on one particular farm in Lynn Township. I mean dumping it and piling it - not necessarily plowing it under I went on a field investigation with the township supervisors, some farmers, and some interested residents of the township. The man investigationg for DER suggested that Lynn Township eanct an ordinance against dumping sludge in the township. And so the supervisors did just that. Then guess who joined the City of Allentown in a legal action to contest the legality of the ordinance? DER did. I brought that strange paradox up at a meeting of the Ag Advisory Committee to DER many months ago, and the DER attorney promised to look into it and explain their action - and I'm still waiting. So you see, the supervisors thought it was "reasonable", but DER thought it was unreasonable.

Klingaman pointed out in his speech and in a questioning period following his address that the problems of agriculture are no closer to be solved despite the legislation that is being introduced, debated, and amended in Harrisburg.

What's needed, he said, is for agriculture to become profitable and attractive enough to keep young people on the family farm.

On the subject of diminishing farmland, Klingaman pointed out that last year foreigners bought $800 million worth of American farmland and this year their purchases may reach $1 billion.

"Invasion by big business and big capital and big government into the function of agricultural production is not the answer to our problem. The president of that agribusiness corporation, like his counterpart in the big industrial corporation, doesn't really care about the means He sees only the end. What counts to him is profitable production spilling off the end of a very impersonal and lifeless assembly line," the legislator stated.

"Ever since the biblical book of Deuteronomy was written so many centuries ago, we have been taught that it is our duty to God as well as to one another to honor the land and to respect the plant and animal life that he put on it," Klingaman continued. "On the whole, humankind was not lived up to that teaching very well, and we're getting further and further away as more

(Turn to Page 115)

Berwick Vegetable Cooperative's 25th anniversary cake is being cut by State Representative William Klingaman, Tamaqua, and Edward Hopkins, chairman of the board, right. Looking on are State Representative Ted Stuban, left, and BVC manager Burt Hetherington.

Insect birth control system devised, approved

ALBANY, N.Y. – The first practical system for interrupting the mating habits of insect pests and reducing their number through biological means rather than through the use of pesticides has been approved by the Environmental Protection Agency for field use against pink bollworm, the scourge of cotton producers throughout the world. While this is the first EPA approval of a product of its type, its inventor says that other similar products for agriculture, forestry and residential pest control are in research and development stages.

Gossyplure H.F., developed by Albany International Corp., is a chemical duplicate of the natural mating scent emitted by female pink bollworm moths to attract male moths, packaged in a hollow plastic fiber. The pink bollworm moths produce caterpillar offspring that devour cotton in Arizona, California and other parts of the world.

When Gossyplure H.F. is applied to a cotton field, it permeates the air with the artificial sex scent so that male moths become confused and rarely find females with which to mate, thus causing a dramatic drop in the number of crop-damaging insects.

Until Albany International developed its unique Conrel hollow fiber, timed release system (Conrel for CONtrolled RELease), the practical use of insect sexual attractants "pheromones" was simply a gleam in the researcher's eye. Pheromones are sophisticated chemicals that are expensive to make, requiring careful distribution and controlled evaporation in the area to be treated if they are to be effective. They are economically competitive with pesticides because they are used in small quantities.

One gram of Gossyplure H.F. (active ingredients) is usually sufficient to arrest the breeding of the pink bollworms, compared to 900 grams of a toxic pesticide for the same result. In field tests near Blythe, Calif., last year, cotton plants treated with Gossyplure H.F. suffered only 10 per cent damage from the pink bollworm versus more than 80 per cent damage to untreated plants.

Unlike toxic pesticides, that are usually sprayed onto crops in either a liquid or powder form, pheromones must be carefully evaporated in precise

(Turn to Page 118)

Conrel's pheromone filled hollow fibers containing approximately one gram of Gossyplure, which prevents pink bollworms from mating, has the equivalent insect control effectiveness of approximately 900 grams of pesticides.

Life on the farm

By Dieter Krieg

Taking advantage of a bit of editorial privilege, I hereby declare June as life on the farm month. And, lest anyone becomes concerned over June -- Dairy Month -- being neglected, let me state my case by beginning with the dairy angle.

June is life on the farm month because this is the time of year when dairymen have one cow going into the maternity pasture while another is coming out. This is one of the busiest months for the calf stork, as well as the farmer.

With long-legged calves stumbling amidst clumps of orchard grass, and later darting away from the farmer's grasp, who can deny that this is life on the farm month? But if you need more proof, the list can grow

June is the month when days are longest. Everything on the farm has sprung to life in full force and splendor.

Corn is up and stretching towards sunny skies. The alfalfa is thick and tall. In the pasture, grass is just barely staying ahead of the cows. In another month its growth will have slowed down. Singing birds and buzzing insects add more proof that this is life on the farm month.

Trees are in full splendor with leaves that are fresh and clean. Strawberries are ripe and the children are home from school.

Add to all this the fact that there is plenty of work to do just in order to keep up with all the life and growth that's going on. Lawns, hay fields, newborn calves, and fresh cows are all demanding attention. It's a busy, and yet rewarding and inspirational time of year. Fortunately, none of that will end when we turn the calendar to July. Life on the farm month, like Dairy Month, lasts all year. And we wouldn't want it any other way.

We Serve the Dairy Farmer

Del. Jr. broiler winners announced

NEWARK, Del. – In one of the closest contests in 30 years, an FFA member from Christiana High School was chosen as the 1978 Delaware Junior Broiler Program champion. Dan Thomas of Bear received the top prize of $25 and a trophy, plus an additional $5 for submitting the heaviest entry. The winning entry scored 94.80 points.

William R. Brown, III, FFA member from Wyoming took second place with a score of 94.25. Another FFA member, Glen Davis of Bear, came in third with a score of 94.15.

Cash prizes were awarded to the top 20 contestants, all of whom scored over 90 points. They are: Allen Cook, Kenton, 4-H; Bonnie McClements, Dover, 4-H; Sherry Warren, Smyrna, FFA; Ellen Sherwood, Camden, FFA; Maria Warren, Woodside, 4-H; Ron Walton, Magnolia, 4-H; Keith Warrington, Bridgeville, 4-H; Dale Cook, Kenton, 4-H; Mike Everline, Harrington, 4-H; Wayne Carlisle, Dover, FFA; Cheryl Warren, Kenton, 4-H; Crawford Shahan, Magnolia, FFA; Matt Smith, Bridgeville, 4-H; Eddie Jestice, Laurel, FFA; Holly Webb, Wyoming, 4-H; Brian Hammond, Houston, 4-H; and George Petras, Clayton, FFA.

First through fifth place winners of the 30th annual Delaware junior broiler finals are (left to right) Dan Thomas, Bear; William R. Brown, III, Wyoming; Glen Davis, Bear; Allen Cook, Kenton; and Sherry Warren, Smyrna. Each contestant raised at least 50 chicks to seven weeks of age.

The Junior Broiler contest was established in 1948 to encourage youth participation in poultry production. Sponsored by the Delaware Poultry Improvement Association and the University of Delaware Cooperative Extension Service, the program is open to youths participating in 4-H and FFA programs.

Each contestant was given 50 chicks in March and was responsible for feeding and caring for the birds through maturity. Seven birds from each flock were selected for competition, dressed by a commercial processor and then displayed and judged.

Judges selected the winning broilers on the basis of conformation, condition, appearance, uniformity of entry, weight and completeness of records.

This year, the birds were raised in 49 days and had an average weight of 4.99 pounds, while the heaviest entry averaged 5.61 pounds per bird. Twenty years ago it took contestants 10 weeks to produce birds with an average weight of only 4.37 pounds. According to the judges, experienced contestants as well as better poultry breeds and feeds are responsible for the improvement.

Stop losing interest,

Farmers First now pays you more interest than ever before.

That's right. More interest for a shorter term.

Our new six month certificate of deposit pays an interest rate at date of issue equal to the U. S. Treasury Bill 6 month rate then in effect. Farmers First takes this highest rate available and compounds the interest daily to give you the **maximum yield for your deposit.** This rate will vary weekly, so call your local Farmers First office to see how much you will receive. $10,000 minimum deposit required.

And even more interest for a longer term.

If you have more time, we'll give you more interest. $1,000 minimum deposit required.

Term	Rate		Effective Annual Yield
1 year	6.00%	Plus daily compounding equals	6.272%
3 years	6.50%		6.812%
4 years	7.25%		7.627%
6 years	7.50%		7.900%
8 years	7.75%		8.173%

Benefits to you.

- Daily compounding on highest rates permitted by law.
- No purchase fee.
- Automatically Renewable at maturity.
- Interest paid to you by check, deposit to any Farmers First account, or added to your renewed certificate.
- Deposits up to $40,000 insured by Federal Deposit Insurance Corporation.

Most all milk has vitamin D

ROSEMONT, Ill. – Ninety-eight per cent of all milk on the market contains vitamin D. This vitamin is important in bone metabolism and utilization of dietary calcium; deficiency in children can lead to the bone disorder rickets. Vitamin D is a fat soluble vitamin, added to milk at the recommendation of the medical and public health community since milk is the primary source of calcium in the diet. The action of sunlight on the skin is another source of the nutrient.

The amount of vitamin D in the diet is increasing, however, via regular use of dietary supplements high in vitamin D, fortification of other foods and because of increasing levels of vitamin D in meat. This latter source is due to a combination of greater use of vitamin D in animal foods and the fact that the vitamin D content of animal tissues is relative to what is consumed in their food. Regular consumption of extremely high levels of the vitamin may lead to toxicity. Some researchers have suggested that one manifestation of this toxicity may be the development of coronary heart disease, although data are preliminary. In any event, when vitamin D toxicity does occur it is most likely the result of regular consumption of dietary supplements high in vitamin D rather than the vitamin D consumed in food.

Although there is no adult Recommended Dietary Allowance for vitamin D, the nutrient is still necessary for prevention of rickets in children and to insure proper bone health. The American Medical Association and other public health authorities continue to endorse adding vitamin D to the diet and to endorse milk as the logical food for vitamin D fortification.

PennAg supporting drive for laryngotracheitis immunization

EPHRATA – The PennAg Industries Association, headquartered here, is cooperating with the Pennsylvania Department of Agriculture and other organizations and persons in an effort to reach small poultry flock owners, urging them to vaccinate against laryngotracheitis (LT) annually.

The agribusiness organization, which has over 400 members throughout the state, is also suggesting that feed suppliers post notices telling customers about the availability of vaccines. If a business does not stock vaccine, they may arrange for it through several sources, says Donald W. Parke, executive vice president of PennAg.

Technical information on vaccines, as well as suppliers may be obtained from Dr. Wilson L. Miller, a veterinarian who specializes in poultry, located in Rohrerstown, Pa. (Phone 717-766-9064). Other sources are John Gearhart, New Holland Supply Co., Box 184, New Holland, Pa. 17557 (717-354-4001); or Knauff Bros., Harmony, Pa., Parke revealed.

LT, a lethal respiratory virus infection of chickens, recently spread to numerous large and small poultry flocks in southeastern Pennsylvania. Small flocks infected with LT have been found in all parts of the state. In unvaccinated flocks death losses can range from 10 to 70 per cent, possibly ruining an entire small operation.

To protect your farm and prevent the spread of this costly disease, your feedman is cooperating with location associations, the Cooperative Extension Service and the Pennsylvania Department of Agriculture by promoting LT vaccination in even the smallest of flocks. A bottle of vaccine enough to save 1 to 500 chickens usually costs less than $4.

Grange leadership school set

HARRISBURG – Approximately 400 Grange members from all parts of the state are expected to attend the 55th annual Pennsylvania State Grange leadership school which will be held at Elizabethtown College, Lancaster County, June 20, 21 and 22.

In addition, representatives from New York, New Jersey, Delaware, Maryland, West Virginia, and Ohio will attend the Mid-Atlantic Grange Youth Conference that will be held in conjunction with the leadership school.

Three National Grange officials will participate in the program.

Mrs. Jenny Grobusky, of Walhalla, S.C., the National Grange women's activities director, will deliver the keynote address at the formal opening at 2 p.m. June 20.

C. Jerome Davis, of Ramsey, Ind., highest ritual officer of the National Grange, will be the speaker at the annual leadership banquet Wednesday evening, June 21.

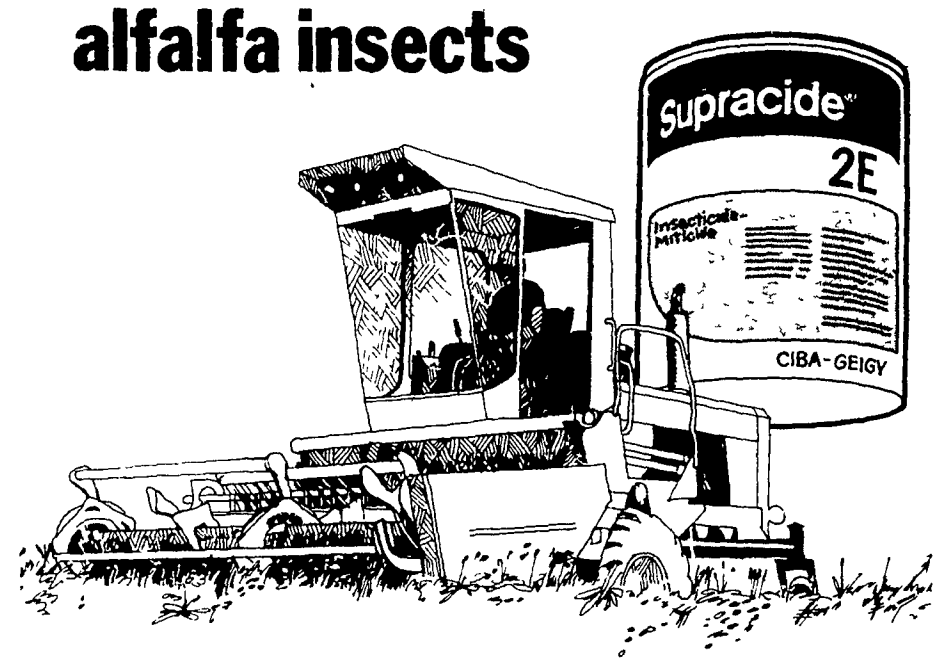
William A. Steel, National Grange youth director, will be in charge of a public speaking contest Wednesday evening that will highlight the Mid-Atlantic Youth Conference.

Workshops will be conducted on a variety of subjects following the Tuesday afternoon opening until the closing exercises at 11 a.m. Thursday. The closing day speaker will be J. Luther Snyder, State Grange master.

Among the workshops will be one on consumerism conducted by Judy Stover of the State Agriculture Department's Bureau of Rural Affairs. Another, on the metric system, will be conducted by Mrs. Doris W Thomas, Lancaster County Extension economist.

OUR RECOMMENDATION:

for alfalfa insects



You know how much a good crop of alfalfa is worth today. It's never been higher . . . You'd like to grow more of it per acre Insect control plays an important role

Supracide is what to use. Why? 14 to 21 days of control, for one thing. Short interval to harvest, for another. These are only two reasons to use Supracide on your high-priced alfalfa. Ask us about some others.

Supracide® trademark of CIBA-GEIGY for methidathion

SUPRACIDE 2E is not a restricted Insecticide - it is a general use pesticide.

CONTROLS - Alfalfa Weevil, Aphids, Spittlebugs, Leafhoppers.

It is a long lasting locally Systemic Insecticide.

Call today for spraying SUPRACIDE 2E after 1st cutting.

U.S. ag trade value assessed

WASHINGTON, D.C. – Besides year to year variation due to weather, future levels of U.S. agricultural exports will depend upon a number of factors. These are the rate of economic growth in both the developed and less-developed countries, the production and trade policies of other nations, and the national and international trade policies of other nations, and the national and international trade policies affecting production, imports, and trade between countries. So says USDA director of economics, Howard Hjort. He says further that: The expansion of U.S. exports to developed countries may be relatively modest in the years ahead. Any increases will be due primarily to increased demand resulting from shifts in consumer demand to higher quality foods, such as meats and meat products. Most of the expected growth in food demand will occur in less developed countries. Most of the countries the income elasticity of demand is still high and greatly accelerates the growth in total demand for food when per capita income rises.

In Western Europe available land resources for feeds and feedgrain production are comparatively more abundant, enabling these countries to have a greater reliance on domestic production for a large proportion of their total feed consumption. The Soviet Union has an abundant land base. However, their production is subject to major yield variability. This translates into a highly variable import demand. The Soviet import demand for grains has ranged from a low of less than 6 million tons in 1974/75 to a high of over 26 million tons in 1975/76. During the past 2 years grain imports have averaged 15 million tons.

Soviet foreign trade policy has generally emphasized self-sufficiency. Foreign trade policy in the USSR is controlled by the Soviet leadership through centralized economic planning and regulatory organizations under the direction of the Council of Ministers. While the USSR generally prefers bilateral trade within the eastern trading bloc, the Soviet Union has stepped up its imports of capital goods, technology, and agricultural products, especially grains, from the developed market economies.

Future USSR imports of grains are likely to increase, yet continue to be variable. The policy decision the USSR made in the early 1970's to make up consumption levels is likely to continue and affect the actual level of U.S. exports in coming years.

There has been a marked change in the food and agricultural policies of this Nation since January 1977. In part, the policy changes are the consequence of events and circumstances; they are also due to our perception of the role and responsibility of our government with respect to the U.S. and world food and agriculture system.

Expansion of U.S. export markets is an essential element of this administration's food and agriculture policies. At the same time we must be concerned about export stability. Sustained growth in farm income for U.S. producers has become increasingly difficult to achieve without continued expansion and lessening the instability in export markets.

World supply and price instability during recent years for a number of major agricultural commodities have pointed up the need to reassess U.S. export policies and promotion programs. Our export promotion programs are aimed at stimulating foreign demand, and a credit thrust designed

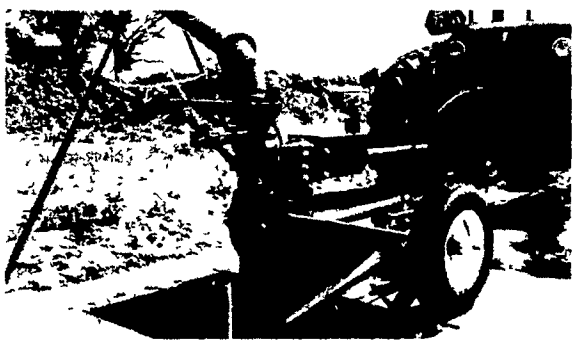
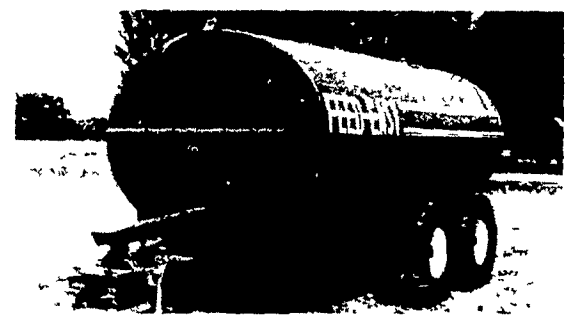
ANNOUNCING A. L. HERR & BRO.
AS AN AUTHORIZED DEALER OF
FEED EASY
MANURE HANDLING EQUIPMENT
(PRODUCTS OF RYDER SUPPLY CO.)

MANURE: PROFIT OR PROBLEM???
It's PROFIT with a FEED EASY Above Ground Storage Tank the no-mess no fuss way to handle nutrient rich liquid manure Save on commercial fertilizer too! The FEED EASY tank features
– Double bolts on the vertical seams 20% stronger than single-bolted tanks
– Widest range of sizes on the market One will fit your needs – without expensive troublesome custom designing
– ASCS approved
And FEED EASY offers one source supply for your Waste Management System
Barn Cleaner
Transfer Pump
Agitator and over the side pumps
1500 to 3000 gallon spreader tanks
Above Ground Storage Structures
Your time is money – make one call to a firm who sells it all!



AGITATING's EASY!
The workhorse of every liquid manure system – the FEED EASY Agitator/Filler Pump! It's a versatile piece of equipment with **many** uses
1 Pumping manure from a pit into an above ground storage tank or into a liquid manure spreader
2 Agitate and pump from an above ground storage tank, through a pit, into a spreader
3 Agitate and pump from a lagoon to a spreader
Now available in 6, 8, 10 and 12 foot sizes!

FARMERS: TAKE NOTICE!!
The FEED EASY Vacuum Liquid Manure Spreader is the clean efficient and modern answer to waste disposal problems Now available with **both** side and rear fill ports for easier more convenient filling And separate intake and discharge ports make fill hose hook-up really **clean**!
Our big 400 cu in vacuum/pressure pump fills even the 2250 gallon unit fast Plus the pump is mounted on the outside of the tank, where you can get at it, within easy reach of the new side fill port lever
Mechanize your waste disposal problem with the FEED EASY Vacuum Manure Spreader—precision designed yet simply and ruggedly built to give years of trouble-free service!



Sling it Clean, Low, Fast!
The FEED EASY Slinger throws liquid manure in an even **low** straight-back 180° spread pattern with a swath up to 40 feet! Messy blowback on the tank the operator and the tractor is gone forever! No need to drive over ground already spread either!
Choose between 1500 2250 and 3000 gallon models
Now with a new two-piece PTO new sidewinder jack and a new 4 fabricated discharge valve
The FEED EASY Slinger is designed for simplicity and dependability with a minimum of maintenance

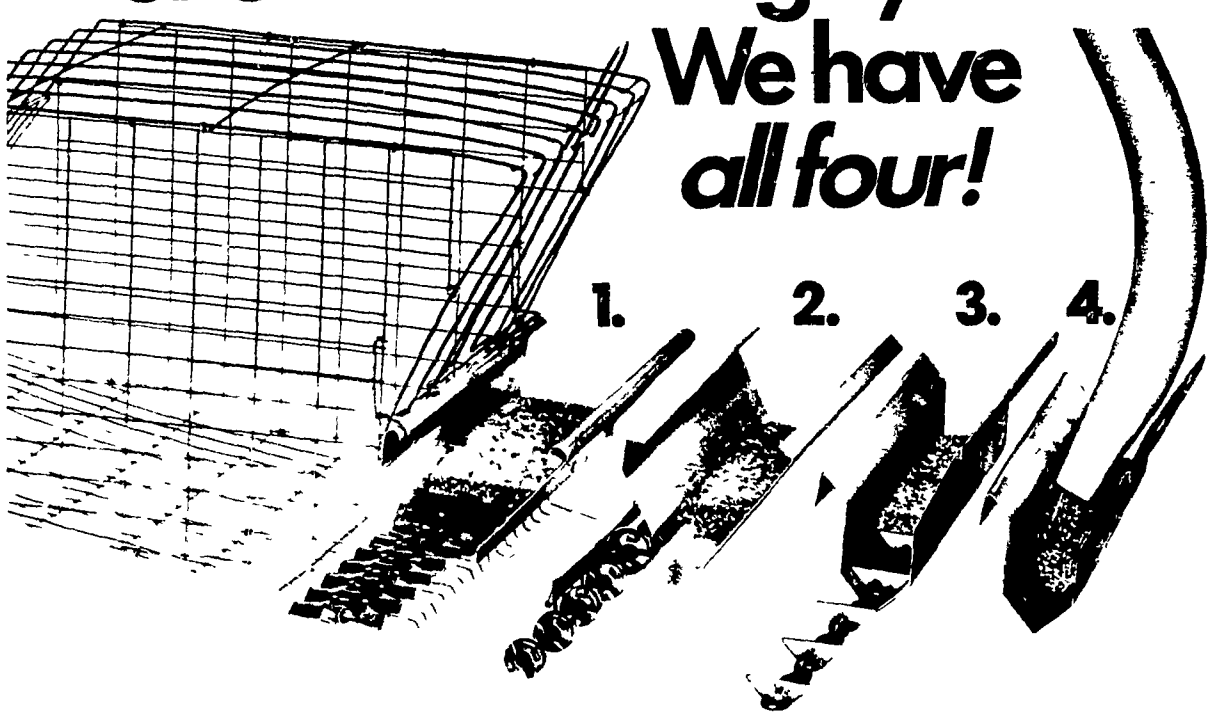
DIAMOND AUTOMATION

Looking for the *one* best feeding system? We have *all four!*



Diamond Automation offers you a choice of four automated feeding systems. Why? Even among the experts not everyone agrees on which system is "best."

With the cost of feed running about 60% of your total production cost, more than ever, proper feeding is critical It can make you — or break you One key to proper feeding is proper distribution.

That's one big advantage of dealing with Diamond Automation We don't have to try to sell you on one particular system because it's the only one we have You pick the system that best fills your feed distribution needs And you can bank on it

Choose from:

1. New Flat Chain System. Feed is carried on top of the chain links You control the depth of feed with ease and accuracy. There's less billing-out Optimum feed level is maintained to all cages Various chain speeds from 20 to 60 ft per minute are available

2. New Link Chain System. Small individual portions of fresh feed are carried through a covered channel Birds can't pick at feed as it passes Each time the system starts, equal portions of fresh feed are distributed throughout the length of the trough Less waste Same formula from beginning to end.

3. The Old, Reliable F-80 Deep "V" System. Keeps an even supply of fresh feed in front of all birds, including those farthest from the feed supply Even debeaked birds eat freely and safely from the entire width of the trough Deep "V" design really cuts down on billing-out

4. Exclusive Feedsaver® System. The feed mix you buy is the mix the birds get Energy-saving, battery powered hoppers deliver a fresh, balanced ration to each bird Automatically compensates for differences in birds' feeding habits to eliminate feed build-up and spillage Reduces overfeeding and billing-out Provides meaningful savings in electric and feed costs

Fully compatible with any of our cage systems. And, if you haven't heard, we've added seven new cage systems We call them our "Egg Maker Series" 2-and 3-high, floor supported or roof suspended, 4-high layer reverse cage, and single tier starter-grower floor supported or suspended

If you'd like to get together and talk systems - cages or automated feeding — just let us know

Tool up here for a great future in the hog business

Producers planning to stay in the hog business are tooling up to squeeze more pork from their feed and their labor

If you're one of them, chances are you ll appreciate the built in feed and labor efficiency of AGSTAR equipment

Sensible feed-saving design features — like precision TIP TOP feed flow adjustment on AGSTAR feeders

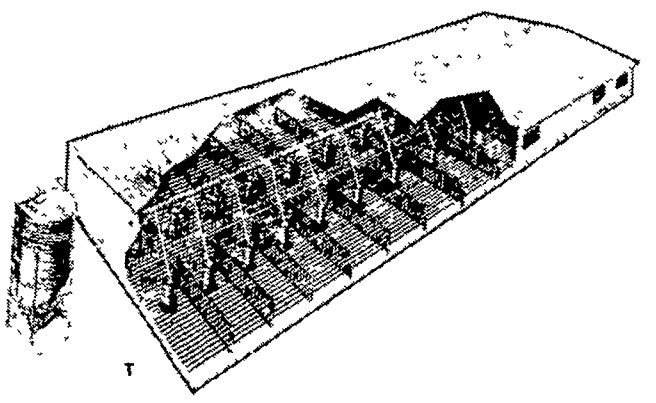
Great labor-saving ideas — like self cleaning watering cups with smooth Porcelainized Steel surface and fully automatic feeding and ventilation equipment

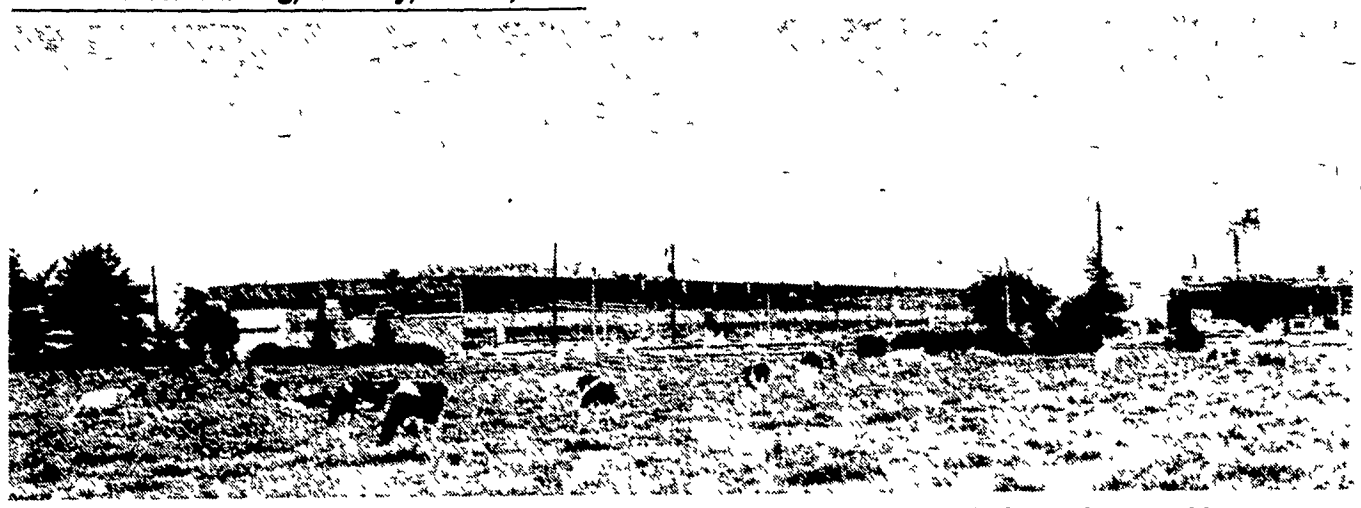
We think you ll also appreciate the ruggedness and durability of every piece of AGSTAR equipment

You can buy AGSTAR equipment and install it in your own buildings Or you can get it already installed and ready to use in one of our new factory built modular hog production buildings for sows pigs or finishing hogs

The equipment samples in the photo are arranged to demonstrate as many of our 40 types of hog equipment as possible For full details on this and our other equipment for confinement, open lot, or pasture — as well as cattle sheep or horse equipment — contact your AGSTAR dealer

- **A. Modular 24-ft. wide farrowing & finishing buildings.**
- **B. Modular 12-ft. wide farrowing & nursery buildings.**
- **C. Lot or pasture fountains.**
- **D. Hog lot gates & partitions.**
- **E. Heavy duty hog & cattle waterers.**
- **F. Big capacity feeders.**
- **G. Ventilation equipment.**
- **H. Round feeders.**
- **I. Feed delivery systems.**
- **J. Galvanized vertical pen partitions.**
- **K. Hog troughs.**
- **L. Porcelainized Steel slats.**
- **M. Rotary feeders.**
- **N. Porcelainized watering cups.**
- **O. Baby pig feeders.**
- **P. Farrowing stalls & pens.**
- **Q. Pig heaters.**
- **R. Nipple waterers.**
- **S. Space-saver nursery feeders.**
- **T. Flex auger systems & feed bins.**





University of Delaware dairy cows coexist peacefully with their urban neighbors. That's Chrysler Corporation's Newark assembly plant in the background.

Cows get urbanized at U of D

NEWARK, Del. – Across the street from the Chrysler plant, up against the Metroliner tracks, and just upstream from the Brookside housing development sits the University of Delaware dairy farm. It's a pastoral scene worthy of a National Grange calendar, smack in the middle of urban Newark.

How long can the cows remain without interfering with urban society? Just as long as they keep putting their best hooves forward, says University of Delaware Extension dairy specialist Dr. George F. W. Haenlein.

The University of Delaware goes to great lengths to keep the bovines on their best behavior and to keep the neighbors happy. The cows are kept attractive and clean; manure isn't spread on the fields when the wind is directed toward Brookside; wastes are kept out of the stream; and the most of the breeding is accomplished by means of artificial insemination. So, the neighbors just enjoy the peaceful cultivated landscape and the chance to show children where milk really comes from.

But managing dairy cattle in a small space without polluting the environment is not an altogether simple matter. First of all, the land itself is valuable as development property. Since the University has already used some of it to build the football stadium, the remaining land must be used very efficiently. Dr. Haenlein realized that a 12-month feeding system would free the operation from its dependence on vast amounts of grazing land. But he also realized that stored silage has an odor which might offend the neighbors. So Delaware Extension horticulturist Dr. Charles Dunham was enlisted to design odor-masking screens of trees. Now the cows have their feed year-round, and once again the neighbors' sensibilities are spared.

The farm machinery and the manure disposal system at the University dairy farm are scaled down to the appropriate size for the limited space they must occupy. Manure disposal is done in accordance with city standards, with one unusual feature. In a university setting, manure is saved for scientific research by agricultural engineers.

On the whole, however, the University's dairy farm is more like than unlike the ordinary dairy farmer's operation. It is run "in the black" with only the amount of labor that it can support economically.

Like the ordinary dairy farmer, the University researchers are always looking for good ways to cut costs. One way they do this is to experiement with money-saving feeds. For example, by interplanting soybeans with corn, the researchers hope to produce more farm-grown protein at a lower cost without sacrificing yield.

Haenlein enjoys the challenge of adapting technology to the needs of the University's special urban location. After all, he notes, it's only a matter of time before farmers in lower Delaware and elsewhere will be facing similar pressures. He wants them to know in advance that it is possible to farm economically on a smaller scale, surrounded by houses and factories. The University of Delaware is doing it.

U.S. ag trade

(Continued from Page 111)

to strengthen buying power in foreign countries with limited financial resources.

The success of any export promotion program depends to a large degree on a favorable policy environment here and abroad. The major components of the overall U.S. export strategy to provide this favorable environment include efforts to (1) improve the international trade climate, (2) meet foreign food assistance needs, and (3) develop foreign country information systems. Action in these broader policy areas serve as the general guidelines for the design and operation of specific export promotion programs such as market development credit arrangements.

The United States continues to have strong interests in establishing a more liberal world trading environment that would permit our efficient agricultural producers to expand exports at reasonable prices, to give U.S. consumers access to a broader range of commodities at reasonable prices, and contribute to the growth of the developing countries.

Cleona firm delinquent

CLEONA – Tri-County Produce, Inc., Cleona, has failed to pay a Perishable Agricultural Commodities Act (PACA) reparation award of $1263 set by the U.S. Department of Agriculture (USDA) in favor of a Pennsylvania shipper for two truckloads of potatoes shipped in October, 1976.

According to officials of the USDA's Agricultural Marketing Service, the firm failed to answer the charges, and USDA ordered it to pay the amount claimed.

The PACA establishes a code of good business conduct for the produce industry. Under it, all interstate traders in fresh and frozen fruits and vegetables must be licensed by USDA, which is authorized to suspend or revokes a trader's license for violating the Act.

and more farmers give up because there are a lot more easy ways to make a living. Today, we are beginning to realize that we must learn the lesson, and learn it quickly. Further delay and further disregard of agricultural problems will only add to the cost of the solution and compound the difficulty.

"You can pray that your kids will love the soil enough to find some sort of satisfaction and contentment in watching things grow out of that irreplaceable resource, the good earth, that God provided. Thank God some people still like to farm, and would rather do that than take an easier way out, like selling out to a developer, and those people are the hope of a world getting hungrier and hungrier and depending upon American agricultural production for something to eat.

"But it must be made profitable and attractive to keep them down on the farm...and on the family farm.

"A recent consultation held by 24 religious demoninational and ecumenical agencies found that the family farm must be maintained and strengthened because:

1. It was found to be the most efficient unit of food production.
2. It is the best unit for conservation of land and water resources.
3. It preserves a genuinely competitive element in the national economy.
4. It provides a solid economic base for strong and cohesive famly life.
5. It represents a way of life and containing the valuable elements of personal freedom, self-reliance, and vocational fulfillment.
6. It provides the best and most suitable basis for the social and economic institutions of the rural community.

"The family farm must, necessarily and justly so, be able to earn a return equal to the cost of production plus a reasonable profit - and "reasonable" means return on investment as well as decent monetary gain based on the number of hours worked. And the return must come from the marketplace, and not from government. We're looking right here at a perfect example - you in the Berwick Vegetable Cooperative have developed a process for marketing your produce and getting a fair return, and it's through your own ingenuity in the marketplace.

Admitting that he is not a farmer, the Schuylkill County politician nonetheless said early in his remarks that he had one interest in common with his listeners. "And I also have one deep and abiding concern that I know you share with me," he added. "Our common interest centers on the questions of how are we going to convince our kids that it is in their best interest to carry on the family farm - or the family small business. After all, all the worrying we do is done because we're concerned about our kids' heritage - not only the mundane things we might be able to lave them, but what kind of social and economic world we are going to pass on to them."

BVC Business Report

In other activities at the 25th anniversary meeting, BVC manager Burton Hetherington reported a profit for the period under review and that the profits would be distributed to the patrons of the cooperative within the time prescribed by Pennsylvania cooperative law. Hetherington noted that the co-op is in a sound financial position.

New directors elected to three year terms were J. Wilfred Richards, Dalton; Clemon Smith, Nescopeck; Robert Seesholtz, Jr., Bloomsburg; Dale Whitenight, Catawissa; and Joseph Skala, Ringtown.

Nature 4-H club meets

TAYLORIA – The first meeting of the 4-H Nature Club was held recently and officers were elected. Steve Aument was named treasurer, Lisa Bilheimer was picked news reporter, and Dannette Groff elected secretary.

The group then went on a hike along the Octorara Creek, collecting specimens and observing nature. After returning, the plants and flowers were placed on boards and pressed.

The next meeting of the group will be held on June 17 at the home of Mrs. Kleinb, Tayloria.

Variety in milk

Can to bottle, bottle to paper, paper to plastic traces the evolution of milk packaging in the United States.

Raw to pasteurized to homogenized to UHT traces product changes. Vitamin A is added to lowfat and skim milk; it's optional for whole milk. Fortification with vitamin D is optional for all forms of milk but it is added to about 98 per cent of the country's milk.

Red Lion Grange meets

RED LION -- Four members of the Red Lion Grange 1781, received their Silver Star Certificates when the Grange met at their regular meeting, June 3, with Lee Burns, master, in charge.

The certificates were presented by the Pa. State Grange Treasurer, John Minor, and a white carnation was presented by Burns, representing Red Lion Grange.

Those receiving certificates were: Cora Keiser, Dean Stabley, and Mr. and Mrs. Thomas Warner. Also recognized, and presented a white carnation was Walter Stein, a charter member of Red Lion Grange with Fifty-nine years of Membership, and Beuhla Saylor with Sixty-nine years of Membership in the Grange. Mrs. Saylor transferred to Red Lion Grange in 1927 from Hopewell Grange.

Twenty other members, of the fifty attending the meeting, have held grange membership for twenty-five or more years.

The next regular meeting will be June 17 at 8 p.m.

The Grange will sell Bar-B-Qued chicken on June 24, beginning at 10:30 a.m. at the Grange Hall.

National Holstein Convention

process of estate planning. Very often it's the wife who is left to settle the husband's estate.

Baugh says, "Estate planning makes an orderly transferral of property from one generation to the next." Due to the new tax laws and the inflated value of land, cattle and other property, it takes more than a will to smoothly administer an estate. Estate planning let's man be the boss instead of being ruled by inflationery land values. Baugh continues, "Estate planning allows a person to outline his intentions for the future ownership of the farm and cattle and enables these intentions to be carried out."

Baugh received his Bachelor of Science degree in business administration from the University of Arkansas, his Master of Science degree from the University of Colorado, and the chartered life underwriter designation from the American College. Baugh has served as guest lecturer on estate planning at three major universities. He was chairman of the 1977 National Inter-Professional Estate Planning Seminars. A popular lecturer and author, Baugh is best known for his creative approaches to practical estate planning.

Order 2 producer decline slowed

NEW YORK, N.Y. – According to the New York-New Jersey Milk Marketing Area's annual report, released recently by Federal Order 2 Market Administrator Thomas A. Wilson, dairymen are leaving the Order at a slower rate than in recent years. In fact, producer decline is reported by Wilson to be the smallest since 1940.

Both the numerical loss and the percentage decline slowed dramatically, says the report.

The average numbers of producers in the pool totaled 18,820 in 1977, 508 fewer than last year. This was the smallest decline since 1940, the first complete year the Orders were in operation.

Declines registered for the previous years in this decade ranged from 867 to 1,752 producers. More significantly, the rate of decline in 1977 was only 2.6 per cent compared to rates of 4.1 to 7.1 per cent in the early seventies.

The number of can producers fell by almost 30 per cent while the loss in bulk tank producers comprised 97.3 per cent of the total in December 1977.

The number of handlers in the pool showed a great variation from month to month. Compared to 1976, it was larger only in May and September and the same in October. The average for 1977 declined to 109 or six fewer than a year ago.

Plants with and without producer milk declined in 1977 by five and three, respectively. Overall, the number of plants declined 17.8 per cent from 1976 to a total of 37.

There were also fewer bulk tank units in 1977 than in 1976. However, the decline from 187 to 178 was only half the loss recorded a year ago.

A total of 46 handlers reported receipts of own farm milk in 1977 compared to 48 and 50 in the two prior years. The number claiming no exemption or partial exemption remained at 1976 levels. There was a reduction of one each in the lists of small handlers and producer-handlers with complete exemption.

Hornbaker chosen for travel program

SHIPPENSBURG – Gary Hornbaker, the son of Mr. and Mrs. Paul Hornbaker, Shippensburg, R5 has been selected to visit Europe this summer as a participant of the People-to-People Citizen Ambassador Program. Gary will join other Citizen Ambassadors in Washington, D.C. on June 27 for an orientation program prior to a 33 day People to People visit in England, Switzerland, France, Germany, the Netherlands and the U.S.S.R.

Gary Hornbaker

Gary will be traveling in a group of 33 youth, 16-20 year olds from 17 states. The group will travel by air and bus as they experience home stays with host families, visits with European youth groups, tour historical sights, and meet new friends from many different cultures in Europe as well as other youth from other states in the U.S.A.

Gary completed 10 years as a 4-H member and is currently a 4-H Leader with the Blue Mountain 4-H club. Last year, he was recognized as a state winner in the "Citizenship" National Awards program and was selected to go to The National 4-H Club Congress, Chicago, Illinois.

Insect birth control

(Continued from Page 107)

quantities, uniformly over a given area, at specific intervals in time. The problem is comparable to uniformly spraying a fraction of an ounce of a woman's perfume over one acre of plants, and being assured that the entire acre has an equal amount of the scent on each plant.

The dispersal problem was solved by Conrel, an Albany International company located in Needham Heights, Mass., by packaging the pheromone in the hollow plastic fibers. The diameter of the fibers are approximately the size of an eight-pound test monofilament fishing line. The pheromone packed fibers are distributed over a field of crops by aircraft or tractors. A sticky substance is used to adhere the fibers to plants in the field. The EPA has determined that the fibers are not environmentally harmful.

According to EPA, because of Gossyplure's similarity to a natural substance, it offers certain health and environmental advantages over chemical toxins now used to control pink bollworms. Laboratory tests indicate that it is harmless to people and has no ill effects on wildlife, soil and water. Field trials in Arizona and California showed that the pesticide affects only the pink bollworm and does not disturb beneficial insects that help keep other insects in check.

The U.S. Department of Agriculture is currently testing the Conrel system in Yakima, Wash., utilizing another pheromone to control fruit tree insect pests. Other tests are also underway to control spruce budworm, the scourge of timber forests, elm bark beetles that transmit Dutch Elm disease, and several insects that attack ornamental plants.

Angus bulls highest since November '74

ST. JOSEPH, Mo. – The average price of Angus bulls sold at auction hit $1057 in April 1978, an increase of $318 per head compared to a year ago, reports Dr. C. K. Allen, executive secretary of the American Angus Association. This is the highest monthly auction average for Angus bulls since November 1974, and compares with an average of just $639 per head in April 1977.

"These prices reflect the growing demand for Angus bulls for commercial beef production," Allen said. "Packers are turning more and more to Angus and Angus crossbreds in order to get yield three or better carcasses that grade U.S.D.A. Choice. Because of this, commercial cattlemen need more Angus bulls to help fill the demand."

The price of all cattle sold at auction in April (both bulls and females) averaged $885 compared with $565 a year ago. For the first seven months of the 1978 fiscal year there have been 336 Angus auctions. At these sales 13,956 females have averaged $662 compared with $541 a year ago. Some 9821 bulls sold this year have averaged $976 compared with an average of $778 for the same period in 1977.

GRAIN STORAGE
$ $ - PAYS - $ $
HIGH PROFITS

The following comparison is based on 25,000 bu. of corn stored till now instead of selling it last Fall at harvest time:

Walking weary miles behind a plow inspired Henry Ford to build the Fordson tractor

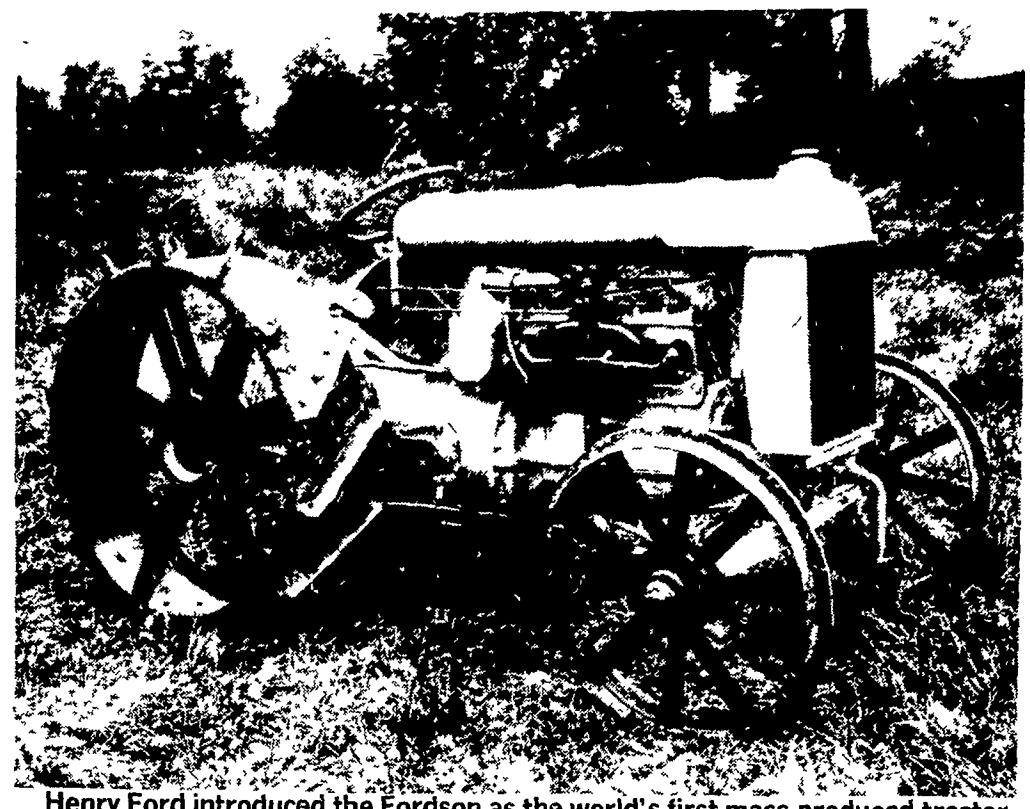
TROY, Mich. – Ford tor Company has been in business of building and rketing tractors for 61 ars.

The automotive giant, which last year began observing its 75th year as a corporation, in 1917 formed a subsidiary, Henry Ford & Son, to market the "Fordson" tractor.

The company's founder, Henry Ford, told in his autobiography how he had experimented with tractors even before building his first car. As a farm boy, he said, he had "walked many a weary mile beind a plow...what a waste...for a human being to spend hours and days behind a slowly moving team of horses!"

Mr. Ford's difficulty was not in designing a tractor - he had built several successful heavy steam models - but in designing one the average farmer could afford. "The maufacturing of a big tractor which only a few wealthy farmers could buy did not seem to me worthwhile," he wrote.

Mr. Ford soon decided that he could do more for the farmer by enabling him to make excursions off the farm, and thus turned his attention to the automobile. Only after it was in production did he return to the tractor, turning out more than 50 experimental models before world events propelled him into making tractors in earnest - and in quantity.



Henry Ford introduced the Fordson as the world's first mass-produced tractor October 8, 1917. The first 7000 units went to Great Britain to help increase food production during World War I. During some years in the 1920's, the Fordson represented 75 per cent of all tractors built in the U.S.

It was early 1917, World War I, and because of the German blockade, Britain was in danger of starving. She needed to import 70 per cent of her food supply, and Allied ships headed there were being sunk in large numbers. Britain's only hope: to increase food production at home. Her only means: the tractor.

Britain's Lord Northcliffe entreated Mr. Ford: "Our farmers need tractors. We want you to build 7000 of them for us, quickly." Mr. Ford agreed. On October 8, 1917, the first Ford-produced tractor rolled off the assembly line, and within seven months the entire order was filled.

When Henry Ford brought his Fordson to the American market in 1918, he was deluged with 13,000 orders within three months. Between 1917 and 1928, U.S.Fordson production totalled 739,977. For some years during the 1920's, 75 per cent of all tractors built in the U.S. were Fordsons. Mr. Ford sold the early

Fordson tractor

(Continued from Page 119)

Fordson for $795 and was able to cut the price to a low of $395 by 1922.

In 1929 Ford tractor manufacturing was transferred from the U.S. to Cork, Ireland, and later to Dagenham, England. From 1933 to 1939, Ford of Britain was the sole producer, building Fordsons for sale in the United States, the United Kingdom, and the rest of the world.

The car and the tractor developed along similar paths. From a single, all-purpose model, the Ford tractor line expanded to a wide variety of models with a range of horsepower, geared to a multiplicity of purposes. Ease of operation and operator comfort were key factors.

An early step in this direction was the Model 9N, the revolutionary new tractor introduced by Ford in 1939. The 9N was one of the world's first production tractors with three-point hitch and a hydraulic system. This enabled the farmer to raise or lower attached implements by hydraulic controls, in order to till the soil at various depths. For the first time, the tools were attached to the tractor.

Five new Ford tractor models in two power classes were introduced in 1955, and Ford became a multiple tractor model manufacturer. The following year, Ford was the first manufacturer to introduce power steering as a standard equipment on all its row-crop farm tractors.

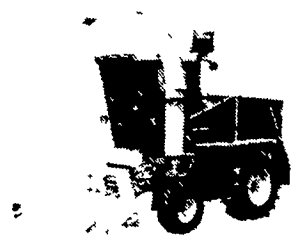
In 1958, Ford brought out the first American-built diesel engines for tractors. Ford was first with power-adjusted rear wheels in 1955, with shift-on-the-go transmission in 1959, and with the tilt-up steering wheel in 1960.

In 1976, the factory-installed cab, which first came to the automobile and then to the truck, came at last to the tractor.

Today, Ford Tractor Operations, established in the early 1960's, is responsible for the design, engineering, and testing of a worldwide line of Ford tractors, for the operation of modern manufacturing facilities on three continents, and for marketing its product through a worldwide organization of nearly 5600 dealers, branches, and subdealers.

WHAT'S NEW

FORAGE CHOPPER



The Hesston Corporation has just added a new top-of-the-line model to its popular family of Field Queen self-propelled forage harvesters. The new machine answers a growing demand for greater engine capacity from big tonnage operators.

Outwardly, the 7650 closely resembles the Field Queen 7600. The only external change is the use of larger tires on the rear drive wheels. The combination of the new 18.4 x 26 rear flotation tires, rear wheel drive traction and front wheel power steering gives the operator easy, precise control of the 7650. These key features are especially advantageous when operating in muddy conditions with a trailing wagon.

The 6V-71, 426 cu. in. 2-cycle Detroit Diesel engine, at 257 horse power, provides great forage harvesting capacity. It is one of the biggest engines offered on any self-propelled harvester on the market today. A new, large-capacity radiator is fitted to the 7650 to meet the cooling needs of the bigger engine.

Costly downtime is reduced in the 7650. A unique componentized construction adds years of useful life. Major components can be replaced more economically than costly rebuilding. And a 36 month or 2,500 hour full Warranty covering all engine parts and labor is offered by Detroit Diesel.

For more information, write Box 788, Hesston, Kansas, 67062.

Cows supply drugs too

Dairy cows do much more than produce wholesome milk and nutritious meat. Some of their glands and organs are used to make drugs that save human lives. Insulin for treating diabetes is produced from cattle's pancreas glands. Liver bile is used to manufacture the drug cortisone and lung tissue extracts are used in the production of a substance used to control bleeding during surgery. Overall, more than 100 life-saving, life-improving drugs in current use can be derived from cows.

yor Paul Doutrich, uphin County com-ssioners John Minnich Earl Reider, and state presentatives Jeffrey ccola, Stephen Reed, seph Manmiller; and dolph Dininni. In a unique st and doubly challenging rt of the contest, the vice milkers had to squirt milk into glasses which were set five to six feet away from the udder. The crowd looked on in fascination.

In other portions of the program, 4-H'ers, FFA'ers and a few folks from the crowd chugged milk shakes The competition was scored on an individual as well as team basis.

Once all that was over, the two finalists for the dairy princess contests were introduced. Accompanying them were the 1977 Dauphin County dairy princess - Donna Capp - and their respective male escorts.

Runner-up Kathy Feidt just finished her junior year at Upper Dauphin High School, and she is a member of the Upper Dauphin 4-H Dairy Club. A veteran of virtually every available office in that club, she owns six cows, and eight calves and has participated in many local and area dairy shows. Her parents have Holstein and Brown Swiss cows on their northern Dauphin County farm.

Debbie Cassel - the new dairy princess - says she enjoys drinking milk. The reason is that it tastes very good and it quenches her thirst quickly. "During my reign I will visit grocery stores and grade schools to sell others on the value of milk," she commented during an interview last week. The new dairy princess believes the industry can benefit the most through visits to grade schools because the younger children haven't made up their minds yet as to what they'll want nutritionally. Older children and adults, are more difficult to convince, Miss Cassel explained.

Miss Cassel entered this year's pageant because she wants to help promote the dairy industry and please her parents at the same time, she said. She's at home on a 350-acre dairy operation which features 250 head of dairy cattle. Two breeds are represented - Holsteins and Jerseys. Asked which of the breeds she personally preferred, the young lady came up with a quick smile and accompanying "Jersyes." She says they make better pets, are more lovable, and she has won more shows with them.

A secretary for Cleveland Brothers Equipment, Co., Harrisburg, Miss Cassel wants to go to college and major in dairy science. "I definitely want to live on a farm," she responded to one of the interviewer's questions.

Aside from her responsibilities at the equipment firm, the new dairy princess also helps to milk cows in the evening and on weekends. Feeding some of the youngstock is another of her responsibilities. She has shown cattle for 10 years in 4-H and feels her coronation as dairy princess is "a great way to end my career in 4-H."

The milking contest at the Harrisburg East Mall last week was of interest to farmers and shoppers alike.

Franklin Co. 4-H beef club brands steers

GREENCASTLE – The Franklin County 4-H Baby Beef Club held its weigh-in and branding at the Greencastle Livestock Auction on May 13.

A total of 56 steers were weighed, branded, and tested for tuberculosis. The weights ranged from approximately 500 to 1000 pounds. This event was held in preparation for the Franklin County Fair and the baby beef round-up and sale to be held in October.

ARCADIAN® liquid gives a profitable boost to alfalfa after the first cutting.

Give alfalfa a liquid boost after the first cutting
That's when topdressing N-P-K, and micronutrients in an Arcadian® liquid fertilizer made with POLY-N® pays big dividends in high yielding, high quality alfalfa You can even add pesticides if you need to

When it's done right, a topdressing after the first-cutting will increase the yields of later cuttings It will raise the protein content Help the crop compete better against grasses And improve the vigor for a long stand life

Arcadian liquid makes it easy Made the SLF® way, Arcadian liquid gives you uniform distribution of fertilizer ingredients from start to finish It's truly the efficient way to turn alfalfa into green gold

Mobile school teaches refrigeration

INTERCOURSE – Better service to the farmer-user of Mueller dairy equipment was the ultimate purpose of a service training school held here this week for the benefit of refrigeration specialists who deal with Mueller products.

The Paul Mueller Company, headquartered in Springfield, Mo., was founded in 1948 and is presently the world's largest manufacturer of bulk milk coolers. It boasts sales of its tanks in 60 countries around the world, has 60,000 of its units in service and most recently won acclaim for its Fre Heater - a unit which uses the warmth taken from milk during the cooling process to heat water. A number of dairymen have reportedly cut water heating costs by $5 and more per day, the servicemen were told.

The school's primary aim, which was held at Queen Road Refrigeration, near here, was to instruct and update area refrigeration specialists on the latest developments in service. A few of the specialized areas which were covered during the 9-hour long seminar were the servicing of refrigeration, automatic washing and Fre Heater units; proper upkeep of equipment and control units, problem analyzation, spray patterns during washing and sanitizing, and routine maintenance procedures. Dealers and servicemen who participated in the school came from throughout southeastern Pennsylvania and New Jersey.

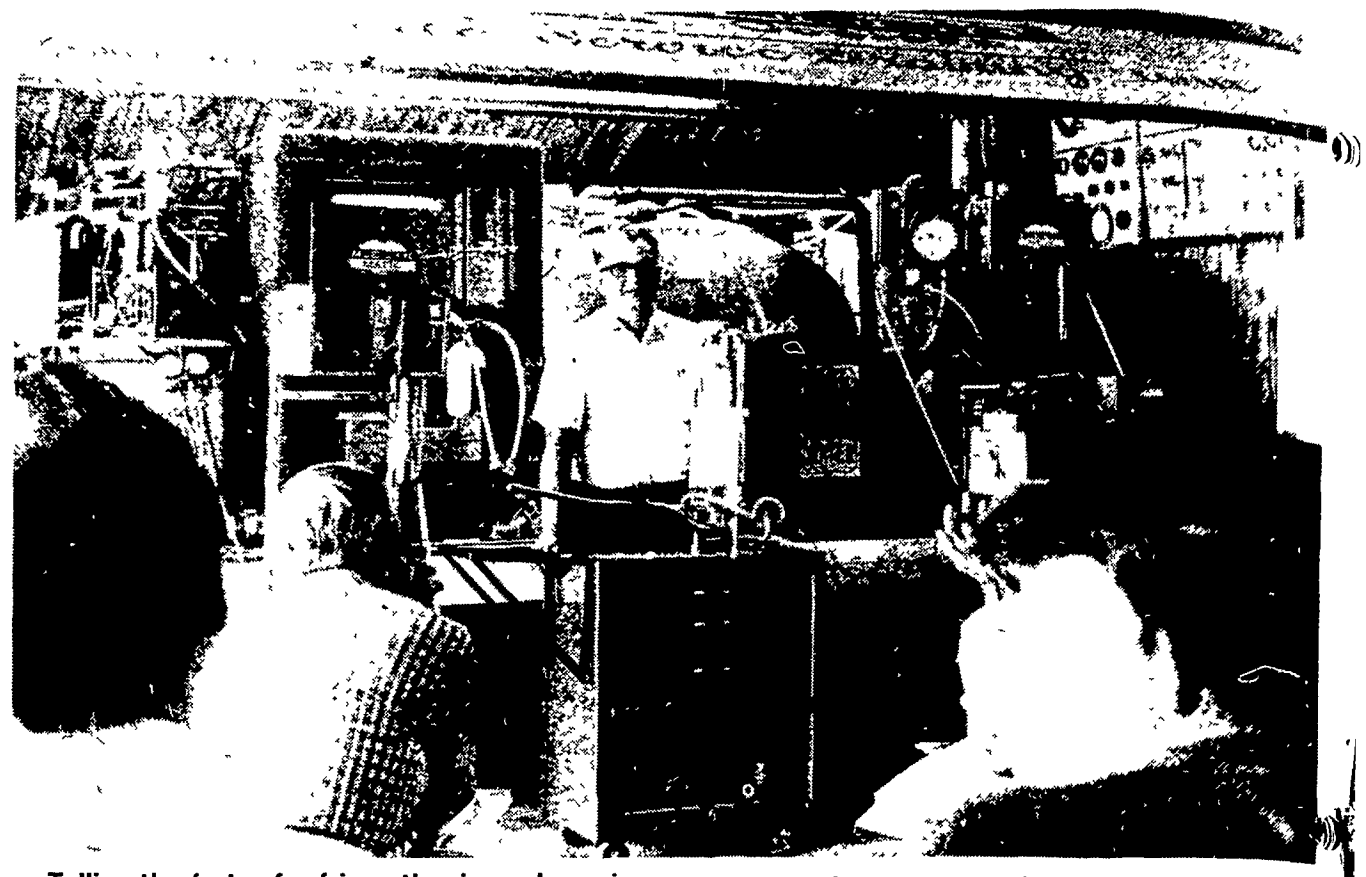
According to Stewart Bryent, sales representative for the Mueller Company, these educational sessions have been going on for about four years and have caused a "dramatic reduction" in the number of problems reported to the company's headquarters. The full-time instructor for these schools is service representative Gordon Stout. He and the mobile educational unit travel all over the country to keep Mueller's representatives up to date on all of the latest equipment and servicing procedures. Stout and his trailer visit the area each year.

Employing 1000 people at its Missouri plant, Mueller manufactures bulk tanks ranging from a 300 gallon to 6000 gallon capacities. Smaller or larger units are made upon special request.

"Service is all important and therefore we go all out to keep these men informed," Bryent says.

Henry Esh, owner of Queen Road Refrigeration, notes that his company offers 24-hour service 365 days out of the year. Covering Lancaster County and all of its adjacent counties, as well as northern Maryland, the Lancaster County firm carries a complete line of Mueller products. The total inventory includes systems and parts for milk house plumbing, and equipment, and milk transfer units.

One of the many points which were stressed by Stout was safety. Using a film which depicted the destructive power of overpressurized gases, the refrigeration serviceman illustrated how in one case a pressurized unit rocketed an estimated 3000 feet into the air. He warned servicemen to follow instructions and precautionary measures.



Telling the facts of refrigeration is made easier with this mobile school. It's used all over the country by the Paul Mueller Company of Springfield, Mo., the world's largest manufacturer of farm bulk tanks. Gordon Stout, service representative for Miller, had the unit in Lancaster County this week.

The satisfaction that comes from doing a good job of farming

It's a great feeling to know that you are the master of your farmlands . that when you treat your soil right, it will treat you right Liming is one of the most important factors in keeping your soil in the highest productive range By raising the pH from a level below 6 0 to 6 5 or higher, you can expect to harvest as much as 5 more bushels of corn per acre, with similar increases for all other forage and cash crops

Horse show held for handicapped children

By KENDACE BORRY

LITITZ – Temporarily postponed by rain, the Boots and Saddles 4-H Gymkhana got going on June 4, at the farm of leaders Daniel and Rose Fellanbaum, Lititz R3. Supported by members of the club who showed in the various classes, the show had a special purpose to all involved.

All the money made from the gymkhana was given to the Spina Bifida Association of Lancaster County, through the March of Dimes. This was the club's community service project for the year.

Besides donating the money, visitors from the organization were invited out to the show and involved in its running. The younger folks were allowed to hand out ribbons to the winners in the show, and watch the proceedings, and now and then a friendly horse was led up to be petted.

The purpose of the Spina Bifida Association of Lancaster County is to forward the course of the spinal birth defect. The organization has meetings throughout the year, featuring specialists involved with helping children with this neurological disorder. Anyone interested in knowing more about the group is urged to contact the March of Dimes office in Lancaster, Pa.

Boots and Saddles 4-H got the idea of donating their gymkhana money to the group while talking to the March of Dimes about another project. The idea spread and the result was Sunday's activities.

Twenty members of the club participated in the show.

Pony, horse, English, and western classes were included. First place winners of the show include:

Grooming and Showmanship, Jr., Pam Sammons; Sr., Lori Sammons; Jr. Hunt Seat equitation, Pam Sammons; Sr. Hunt Seat Equitation, Lason Bussell; Egg and spoon, Beth Harclerode; Hunter under saddle, Lashon Bussell; Scurry race, horse, Sandy Hamilton.

Walk-jog, Karen Cope; walk-trot, Nichole Brewer; Jr. Western equitation, Pam Sammons; Sr. Western equitation, Beth Harclerode; Barrel Race, horses, Karen Ebersole; Western pleasure ponies, Doug Fellenbaum; Western pleasure horses, Beth Harclerode; Western riding, Lori Sammons; Pony pole bending, Troy Hatfield; Horse pole bending, Karen Ebersole; Pair class, Pam and Lori Sammons; Break and out, Lori Sammons; Pony trail, Sharon Snyder; and horse trail, Lori Sammons.

The club is located in the Manheim Lititz area.

Handing out the ribbons at the Sunday show were, in front, Anthony Fulvio, Brad Stauffer, and Michael Koch. Ringmaster Fred Bussell looks on, while Pam Sammons awaits her first place ribbon in the Junior Western Equitation class.

For Dairy & Poultry Farmers - the new MARTIN V-MODEL semi-liquid spreader (patent pending).

"NEW" "NEW"

The new Martin Spreader is designed to handle manure from free stall barns, semi-liquid storage, barn cleaners and front end loaders. Beverly Hershey named Chester Co. dairy princess

Susan Pepple, 1977 Chester County dairy princess, crowns her successor Beverly Hershey at the recent dairy princess contest in that county.

COCHRANVILLE -- Beverly Hershey of Cochranville was selected the 1978 Chester County dairy princess at the annual banquet and contest held on May 20, 1978. She was also selected Miss Congeniality by her fellow contestants.

Miss Hershey is currently attending Messiah College where she is majoring in home economics.

Winning the alternate dairy princess title was Carol Pierce, Oxford.

The judging began in the afternoon with interviews and scrapbook contests. The eliminations ran into the evening with each girl presenting her milk promotional skit.

The remaining four finalists included Carl Peirce, Patty Jenkins, Raquel Moore, and Erin Strolmier.

Judges were Mrs. Lillian Roberts, Lancaster, and Mr. and Mrs. John Barley, Conestoga.

Miss Hershey will now represent Chester County dairymen in the Pennsylvania state contest in September at Camp Hill. She is also available for speaking engagements. To secure her appearance, contact Susan Pepple, 215-932-4324 or Mrs. Jean Lawrie, 215-932-8605.

4-H leadership congress

UNIVERSITY PARK – 4-H members from around the Commonwealth will learn specialized leadership skills when they take part in Pennsylvania 4-H leadership Congress, June 26 to 29, on Penn State's main campus.

The county delegations will make up approximately 1300 4-H members who will converge to share and contribute ideas which will improve local community programs.

At the 4-H Congress the participants will take part in assemblies, discussion groups, and recreational activities.

Twenty-three 4-H'ers from Cumberland County will be involved; nine from Schuylkill County; and 27 from Chester County.

Members participating in the event from Cumberland County are: Karen Hornbaker, Wendy Mains, Kelly Henry, Cindy Otto, Robbie Adler, Jill Barrick, Janice Davidson, Sharon Kelly, Jim Schlusser, Nancy Yorlets, Kim Brackbill, Shirley Coyle, Jenny Fenicle, Becky Garman, Joan Davidson, Edith Hemminger, Krista Henry, Karen Kuntz, Danny Mains, Brenda Negley, Steve Otto, Steve Saphore, Sherri Weber.

Those taking part from Schuylkill County include: Elayne Hupka, Lori Eagan, Suzanne Krotchko, Debbie Trabosh, and Jackie Eagan from Saint Clair Eager Beavers; Chris Temple from Hegins Valley Trailriders; Karen Bickleman from the Shenandoah 4-H Club; Jack Kauffman from the Auburn Cheeful Workers; and Theresa Gahen from Mahanoy City 4-H Club.

Chester County's participants are: Tim Munson, Phoenixville; Roger Davidheiser, Pottstown; Dean Nafziger, Phoenixville; Jonathan and Michael Weinstock, Phoenixville; Edward and Susan Rulp, Pottstown; Sarah Nothstine, Downingtown; Patricia Maniscalco, Coatesville; Marie Crossan, Avondale; Sharon Stinson, Hockessin; Jean and Janette Wyatt, West Grove; Lois Mark, West Grove; Ann Williams, Parkerford; Michele Stone, Pottstown; Bonnie Shaw, Downingtown; Sandra Angelini, Hockessin; Olga and Lee-Ann DuMars, Phoenixville; Lynda Thompson, Kennett Square; Betsy Wollaston, Toughkenamon; Alison Scheib, Phoenixville; Jacky Mento, Downingtown; Robert Ekdahl, West Chester; Janet Latshaw, Spring City and Karen Martini, Lyndell.

"This year's conference will include six areas of leadership orientation and development," say Penn State 4-H agents. "A leadership school for teen leaders, a state leaders forum for adult leaders, delegate workshops for 13- to 15- year-olds, day camping training, and 4-H reporters training are aspects of the program."

Selected teen leaders will attend a special school designed to increase skills to work effectively in planning and conducting county youth programs. Topics will include communications skills, understanding social concerns and group processes, and recreation.

Leaders and Extension staff members will meet with college of agriculture officials and participate in educational workshops involving the understanding of leadership principles, working with groups, communications, and subject matter related to selected 4-H projects.

Also, scheduled during Congress will be a day-camping leadership program. Youth between the ages of 14 and 17 will be involved in this educational experience.

Leadership Council delegates will arrive on the Penn State Campus June 23 for two days of counseling and orientation to prepare them for their duties the remainder of the week.

Highlights of the four-day conference will include the Iron Clad Agreement, a dramatic performance about American inventions in the latter half of the 19th Century; Jimmy Gross and Peggy, an electronic musical spectacular; and an educational film, "Grab Hold of Today," starring Dr. Eden Ryl, that offers suspense, excitement, and humor in emphasizing how to eliminate existing negative attitudes and free young people to prepare for tomorrow.

Gregory to participate in 4-H conference

LITITZ -- Martha Gregory, of 721 East 28th Division Highway, Lititz, a Pennsylvania 4-H member, will take part in the West Virginia Older 4-H Members Conference to be held at Jackson's Mill, Weston, W. Va., from June 25 to 30.

Martha received the honor trip on the basis of her leadership and citizenship activities, reports Henry T. Moon, 4-H specialist at the Pennsylvania State University.

She and another state 4-H member, William Devore, of Washington R8, will participate in the conference.

Committee plans PEIA management conference

ARLINGTON, Va. — Poultry and Egg Institute of America (PEIA) staff and industry representatives met in Philadelphia recently to begin planning for the Institute's Eastern Regional Management Conference, November 8 and 9, 1978 at the Benjamin Franklin Hotel, Philadelphia.

Present at the session were PEIA Vice Presidents Richard Ammon and Paul Korody, as well as Kenneth Longacre, Horace W. Longacre, Inc., Franconia, Pa.; Jack Rawlins, The Fox Company, Newfield, N.J.; Al Schwartz, Poultry and Egg Marketing, Vineland, N.J.; Richard Stark, Hubbard Farms, Walpole, N.H., and Hendrik Wentink, Pennfield Corporation, Lancaster, Pa.

"The Eastern Regional Management Conference will be a showcase for 'experimental techniques' in conference communication," says Ammon. "Although this conference is being held as a replacement for the former NEPPCO convention, we do not intend to copy the NEPPCO convention format. Instead, we feel the Insittute should use this opportunity to develop a new format with new and different program ideas, and utilize speakers and workshop leaders who are among the very best in their respective fields and who for the most part are new to industry audiences."

According to Committee members, the two-day session will focus on profits through management development and will encompass topics such as the expanding role of the federal government; the American diet and the change it has undergone in the past decade; and evaluation of marketing opportunities and techniques - as well as programs on the general economic outlook and better financial management. The Conference will focus on these problems relative to the eastern half of the United States.

Details on speakers and specific program schedules will be released as they become available.

Rabbit conference set

LANCASTER – Mark your calendar and plan to attend the Rabbit Conference on July 28 and July 29, 1978 at Kern Graduate Center on the main campus of Penn State.

This conference is being planned for anyone interested in the rabbit industry. Presentations will include talks on nutrition, genetics, management, disease and parasite control, housing, equipment, breeding, research needs, commercial rabbit production, processing and marketing.

Also, workshops will allow everyone to choose a subject and participate in discussing show rabbits and management, association activities, use of pharmaceuticals and how to show a rabbit.

A program, list of Inns and Motels, and a registration form can be obtained by writing to: Conference Center, 410 Keller Building, University Park, Pa. 16802. One should please specify on the request, "Rabbit Conference" program.

Everyone with interest in the rabbit industry is welcome to attend. Conferees must pre-register.

Bank officers promoted

ANCASTER – Com-wealth National Agri- Corp, a wholly-owned sidiary of Com-wealth National Bank, rrisburg, announces the motions of six officers. ohn R. Biechler, Lan-er, was advanced from sident of Agri-Loan Corp. hairman of the board of ectors. Biechler is sident and chief cutive officer of Com-wealth National Bank.

Harry Wallick, York, who was president of the bank's York Region, was named an Agri-Loan Corp. vice president.

John J. Baker, Gap (Salisbury Township), was promoted from secretary to treasurer, succeeding Robert P. Bucher, Conestoga, who was recently named president of the subsidiary.

John W. Risser, Manhem (Penn Township), has been promoted from assistant secretary to secretary. Risser joined Commonwealth National Bank in 1973 as an agricultural representative and was named assistant manager of the bank's Agricultural Loans Department in 1975.

Joseph S. Lefever, Lititz, is the subsidiary's new assistant treasurer. A native of Manheim, he joined Commonwealth National Bank as an agricultural representative in the Agricultural Loans Department in 1974. A 1972 graduate of Manheim Central High School, Lefever was an active member of the Future Farmers of America (FFA), and in 1974 received the American Farmer Degree for his work in the field of agricultural business.

J. Mark Bushong, Landisville (East Hempfield Township), was named assistant secretary of the subsidiary. He joined the bank as an assistant manager of the Agricultural Loans Department in 1977, after owning and operating a 130-acre dairy and poultry farm near his native Columbia, Pa., for about 30 years. A past president of the Lancaster County Cooperative Agricultural Extension Service Board, Bushong is a director of Lancaster County Council of Churches, and the Community Action Program of Lancaster County.

Commonwealth National Agri-Loan Corp., which is headquartered at the bank's Lancaster Region office, 28 Penn Square, Lancaster, was formed in 1970. As of the end of 1977 the subsidiary's loan portfolio totaled $12,775,000, a 26.9 per cent gain over its 1976 amount. Agri-Loan Corp. serves farm customers in 20 Pennsylvania counties.

Rare insect appearing

COLLEGE PARK, Md. – Gypsy moths are making headlines this year in the northern tier of counties after being relatively inactive for several years. But the big news from a lay person's standpoint is the appearance through-out central Maryland of the palmerworm–seldom seen except by professional entomologists, deep in the hardwood forests of the eastern U.S.

Palmerworm larvae have one thing in common with gypsy moth larvae – they both prefer the leaves of oak trees. But gypsy moths are considerably larger and much more destructive.

Textbooks describe the palmerworm as a relatively rare insect whose populations peak about once every 60 years. Actually, the last recorded populations peak about once every 60 years. Actually, the last recorded population peak in the East appears to have been about 1880 – nearly a century ago.

Because he is seldom seen and not notoriously destructive, the tiny palmerworm has not been well studied. In fact, the U.S. Environmental Protection Agency doesn't even have specific pesticide label directives for its control.

Eggs laid by these moths should be producing caterpillars in large number just about now (early June). The caterpillars are only about one-half inch long. They are olive-green, with two white stripes along the side and two narrow white lines on the back.

If you suddenly find large numbers of such caterpillars on your property, don't panic. They probably won't do much damage. Just remember that you're seeing something that won't appear again for 60 to 100 years – based on past history.

Dairy princess

(Continued from Page 101)

Second runner-up is Holly Amos, the daughter of Mr. and Mrs. James N. Amos of Street. Holly, age 18, is a senior at North Harford High School. She plans to attend Harford Community College, majoring in pharmacy and chemistry.

Active in school organizations, Holly sings with the barbershop quartet and the concert choir and is a member of the National Honor Society and the German club.

The owner of three registered Holsteins and two horses, Holly has carried a variety of 4-H projects and serves as a junior leader. In 1977, she was a delegate to the Mid-Atlantic dairy conference held at the National 4-H Center in Washington, D.C.

As a member of the Harford County Farm Bureau's youth group, Holly has helped to prepare and present an agriculture slide program in public elementary schools.

Crowning of the princess by Donna Knox of Whiteford, the 1977 princess, was the highlight of the dairy promotional activities at the shopping complex. Beginning in mid-afternoon, area youths presented demonstrations to mall shoppers on preparing festive dairy foods.

Taking part in the demonstration programs were: Susan McGinnis, detailing the preparation of cheese cake; Wanda Almony, butter mints; Laura Smick, cheddar filled beef roll; Denise Mismick, triple treat spread; Roxanne Grubb, candy mints; Melissa and Robin Martin, cheese biscuit stacks and butter making; and Anita Wehrman, ha' pennies and a cheese ball.

Judges for the pageant were Cassie Wilhide, dairy farm wife from Detour; Judith Strehan, Towson, director of Dairy Council of the Upper Chesapeake; and Richard Baker, Silver Spring, a marketing specialist with the Maryland Department of Agriculture. Jack Mathews, administrator of the Maryland Farm Bureau, served as the master of ceremonies. Entertainment for the program featured the Sweet Adelines, a women's barbershop chorus from the Towson area.

Other pageant contestants were Alice Wislon, Pylesville, and Nancy and Carolyn Lowe, Pylesville. Chairman of the Area 5 program is Sally Gill of White Hall.

The Maryland state dairy princess pageant is scheduled for July 27 at the Hunt Valley Inn.

Revised shipping regulations proposed for pseudorabies

WASHINGTON, D.C. – Revised federal shipping rules are being proposed in an effort to halt the interstate spread of pseudorabies in swine, according to F.J. Mulhern, administrator of the Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture (USDA).

A series of regional meetings are being planned to help explain the proposed shipping rules to farmers and other segments of the swine industry and to get their comments on the new regulations. The meetings will be held approximately 30 days following publication of the proposed regulations in the Federal Register.

The proposed regulations, designed to halt the spread of pseudorabies are scheduled to be published in the Federal Register on May 23, 1978. A period of 60 days has been provided for interested persons to submit their views and comments. Written comments should be sent to the Deputy Administrator, Veterinary Services, APHIS, USDA, Federal Bldg., 6505 Belcrest Rd., Hyattsville, Md. 20782.

Storable milk

Milk can be stored for three months without refrigeration thanks to presterilized containers. Known as asceptic packaging, these sterile containers are used to package milk processed by Ultra High Temperature (UHT). This revolutionary processing development involves heating milk to temperatures ranging from 275° to 300°F. from two to eight seconds, then rapidly cooling it.

Damaged trees are worth money

LEBANON -- Almost everyone knows that trees and other living plants are valuable. They help beautify our surroundings, purify our air, act as sound and wind barriers, manufacture precious oxygen, help us save energy through their cooling work in summer.

However, many people don't realize that trees and other landscape plants are worthy money. Property owners can collect up to $500 per tree or bush, if they are damaged or destroyed. If a person suffers landscape loss or damage from storms, floods, vandalism, vehicle accidents, or even air and soil pollution, he may be able to offset the loss through a homeowners insurance claim or federal income tax deduction.

To make sure he gets the maximum allowed in case an insurance or tax claim is made, it is important for one to take pictures of the trees and shrubs now while they are healthy. The photographs are necessary to substantiate a claim. One should keep a record of purchases from the nursery and expenses incurred in maintaining plantings. A person should check insurance policies to determine the amount and kind of landscape coverage he has.

If one does suffer landscape loss, he should contact a local professional tree service company and have them send out a qualified arborist. A competent professional can see things that might be missed, help correct damage and prescribe remedies a person may be able to do himself. He will establish the amount of loss in financial terms which is necessary if one wants to deduct it as a casualty loss on federal income tax. It is important to have this appraisal done right after the damage occurs.

These are some helpful hints to take before and after any casualty loss occurs to your trees and shrubs. Taking them can improve the value of an investment in nature's green, growing gifts, and prevent financial loss if they should be damaged or destroyed.

For a list of professional arborists, one can contact the Lebanon County Conservation District at 717-272-3377.

Weaver drivers honored

NEW HOLLAND – Victor F. Weaver, Inc., a New Holland food processing firm, recently honored 54 of its truck drivers with annual safe driving awards totaling $16,645.

The top award was presented to Lee S. Weaver, 1763 West Main Street, Ephrata, Pa., for his 13 consecutive years of safe driving. Weaver's record consists of more than 899,000 miles.

In addition to Weaver, other top safe driving awards were presented to Richard McCarty, 12 consecutive years; James Stoltzfus, nine consecutive years; Leon Stauffer and Gordon Landis, eight consecutive years; Walter Kurtz, Bob Knipfel and Robert Musser, seven consecutive years; Barry Dissinger and Lamar Weinhold, six consecutive years; and Jesse Weaver, Terry Hartranft, and Raymond Weaver for five consecutive years.

Twenty-four other drivers received awards for one to four years of consecutive safe driving during their employment at Weaver.

During the past year, the Weaver transportation fleet averaged more than 57,000 miles per week and accumulated three million miles of travel. The Weaver fleet delivers Weaver food products to more than 30 states throughout the nation.

Victor F. Weaver, Inc., is a large processor of prepared poultry products including Weaver brand fried chicken, Weaver luncheon meats, Weaver chicken hot dogs, Weaver Dutch Entree products, and Weaver egg products.

Entry blanks available for Eastern Nationals

TIMONIUM, Md. – Entry blanks and premium lists are now available for the 32nd annual Eastern National Livestock Show to be held at the Maryland State Fair Grounds, here, October 4 through 8.

More than $50,000 in premiums will be offered at the show, largest livestock event in the East, which will be held this year in a newly-constructed pavillion on the fair grounds in this suburb just north of Baltimore.

A number of new judging events are scheduled for this year's show, according to John Wildesen, show manager.

There will be an additional beef cattle class for the Simmental breed which never has been shown before in a livestock show in the East. The judge for this event will be Herman Purdy, of Alexandria, Pa.

Supplementing the Junior Stockman of the Year Contest, for beef cattle breeders in 4-H Clubs and Future Farmers of America chapters will be the junior horseman contest and the junior diarymen contest. These new events are open to both individuals and teams.

Another new event, a cutting horse show on October 7 and 8, is keyed primarily to public visitors to the show.

York Co. 4-H winners named

YORK – Thirty-eight 4-H'ers were selected as York County winners in the 4-H National Awards Competition held each spring. The 4-H'ers were chosen for their outstanding accomplishments in a specific project or special area. These 4-H'ers will compete with 4-H'ers across the state to be named the State Winner in their respective areas. The interviewing and selecting of state winners takes place July 21 at Penn State University.

Following are the winning 4-H'ers and their area of specialization: Achievement: Brooke Palmer, Shrewsbury; Joyce Hemminger, Glen Rock; Agriculture: Steve Trostle, Red Lion; Automotive: Bonnie Wire, Spring Grove; Beef: Tim Beck, Seven Valleys; Bicycle: Mark Ebaugh, Delta; Bread: Susan Detter, Dover; Citizenship: Jonathan Myers, Thomasville; Linda Brown, Loganville; Clothing: Kay Swartz, Hanover.

Commodity Marketing: Christy Waltersdorff, Hollywood Drive, York; Conservation: Troy Goodling, Seven Valleys; Dairy: Tommy Welsh, East Berlin; Dairy Foods: Joyce Hemminger, Glen Rock; Dog: Jim Wherley, Hanover; Electric Energy: Tommy Welsh, East Berlin; Entomology: David King, Delta; Food Conservation: Jean Hemminger, Glen Rock; Foods and Nutrition: Linda Brown, Loganville; Food Preservation: Brooke Palmer, Shrewsbury; Forestry: Carol Haskins, Spring Grove; Gardening: Beckie Brenneman, Glen Rock; Health: Jonathan Myers, Thomasville; Lisa Dobrosky, Glen Rock.

INTRODUCING:

NEW . . . UNIQUE!

PURIDINE™

(Patent pending)

- No other product available can be used for **both** teat dipping and udder washing.
- One percent iodophor. Highly effective against spread of organisms which may cause mastitis.
- Controlled viscosity provides better control of mastitis-producing organisms.

- Emollients help keep teats soft, reduce chapping and irritation.
- Controlled PH (4.0 to 4.4) helps prevent irritation.
- Convenient sizes for either small or large herds.

The only combination teat dip and udder wash in America.

Cash Rebates Up To $20.00

PURIDINE REBATE SCHEDULE:

$2.00 rebate per 2½-gal. jug
$4.00 rebate per case (2-2½-gal. jugs)
$20.00 rebate per 30-gal. drum

Also companion cash rebates on New Purina Dairy Cleaner.
$1.00 rebate per 25 lbs.
$3.00 rebate per 100 lbs.
$5.00 rebate per 150 lbs.

Offer expires Dec 31, 1978
